Table of Contents

Introduction to Programming	1
Before You Start Programming	1
Program 10 : System Configuration Setup	13
10-01 : Time and Date	13
10-02 : Location Setup	15
10-03 : Blade Setup	17
10-04 : Music on Hold Setup	29
10-05 : General Purpose Relay Setup	31
10-06 : ISDN BRI Setup	33
10-07 : Conversation Record Circuits	35
10-08 : Pre-Ringing Setup	37
10-09 : DTMF and Dial Tone Circuit Setup	38
10-12 : CCPU Network Setup	40
10-13 : In-DHCP Server Setup	43
10-14 : Managed Network Setup	45
10-15 : Client Information Setup	47
10-16 : Option Information Setup	49
10-17 : H.323 Gatekeeper Setup	53
10-18 : H.323 Alias Address Setup	55
10-19 : VOIPDB DSP Resource Selection	57
10-20 : LAN Setup for External Equipment	59
10-21 : CCPU Hardware Setup	61
10-22 : Setting the Wake On LAN for APSU	63
10-23 : H.323 System Interconnection	65
10-24 : Daylight Savings Setup	67
10-25 : H.323 Gateway Prefix Setup	69
10-26 : IP System Operation Setup	71
10-27 : IP System ID	73
10-28 : SIP Trunk Basic Setup	75
10-29 : SIP Proxy Setup	77
10-30 : SIP Authentication Information	80
10-31 : Networking Keep Alive Setup	82
10-32 : PRI Networking Channel Limitation	84
10-33 : SIP Registrar/Proxy Setup	86
10-36 : SIP Trunk Registration Information Setup	88
10-37 : UPnP Setup	90
10-39 : T1/PRI Fractional Setup	92
10-40 : IP Trunk Availability	93
10-41 : General Purpose Contact Detector Setup	95
10-42 : Virtual Loop Back Port Setting	97
10-45 : IP Routing Table Setup	99

Table of Contents

10-46 : DT700 Server Information Setup	101
10-47 : Terminal License Server Information Setup	104
10-48 : License Activation	105
10-49 : License File Activation	106
10-50 : License Information	107
10-51 : PRI/T1 Selection for 1PRIU Blade	109
10-52 : Free/Demo License Information	111
10-54 : License Configuration for Blades	112
10-55 : UX5000 Blade Network Setup	114
10-56 : XML Portal Page for IP Terminal	116
Program 11 : System Numbering	119
11-01 : System Numbering	119
11-02 : Extension Numbering	129
11-04 : Virtual Extension Numbering	131
11-06 : ACI Extension Numbering	133
11-07 : Department Group Pilot Numbers	135
11-08 : ACI Group Pilot Number	137
11-09 : Trunk Access Code	139
11-10 : Service Code Setup (for System Administrator)	141
11-11 : Service Code Setup (for Setup/Entry Operation)	144
11-12 : Service Code Setup (for Service Access)	148
11-13 : Service Code Setup (for ACD)	152
11-14 : Service Code Setup (for Hotel)	154
11-15 : Service Code Setup, Administrative (for Special Access)	156
11-16 : Single Digit Service Code Setup	158
11-17 : ACD Group Pilot Number	160
11-19 : Remote Conference Pilot Number Setup	162
Program 12 : Night Mode Setup	165
12-01 : Night Mode Function Setup	165
12-02 : Automatic Night Service Patterns	167
12-03 : Weekly Night Service Switching	170
12-04 : Holiday Night Service Switching	172
12-05 : Night Mode Group Assignment for Extensions	174
12-06 : Night Mode Group Assignment for Trunks	175
12-07 : Text Data for Night Mode	176
12-08 : Night Mode Service Range	178

Table of Contents

Program 13 : Abbreviated Dialing	181
13-01 : Abbreviated Dialing Function Setup	181
13-02 : Group Abbreviated Dialing Bins	183
13-03 : Abbreviated Dialing Group Assignment for Extensions	185
13-04 : Abbreviated Dialing Number and Name	187
13-05 : Abbreviated Dialing Trunk Group	189
13-07 : Telephone Book Number and Name	191
13-08 : Telephone Book System Name	193
13-09 : Telephone Book Group Name	195
13-10 : Telephone Book Routing	197
Program 14 : Trunk, Basic Setup	199
14-01 : Basic Trunk Data Setup	199
14-02 : Analog Trunk Data Setup	204
14-04 : Behind PBX Setup	208
14-05 : Trunk Group	210
14-06 : Trunk Group Routing	212
14-07 : Trunk Access Map Setup	214
14-08 : Music on Hold Source for Trunks	216
14-09 : ACI Conversation Recording Destination for Trunks	218
14-10 : Power Failure Terminal for Trunks	220
14-11 : ID Setup for IP Trunk	221
4-12 : SIP Register ID Setup for IP Trunk	223
Program 15 : Extension, Basic Setup	225
15-01 : Basic Extension Data Setup	225
15-02 : Multi-Line Terminal Basic Setup	228
15-03 : Single Line Terminal Basic Data Setup	237
15-05 : IP Terminal Basic Data Setup	241
15-06 : Trunk Access Map for Extensions	245
15-07 : Programmable Function Keys	247
15-08 : Incoming Virtual Extension Ring Tone Setup	257
15-09 : Virtual Extension Ring Assignment	259
15-10 : Incoming Virtual Extension Ring Tone Order Setup	261
15-11 : Virtual Extension Delayed Ring Assignment	263
15-12 : Conversation Recording Destination for Extensions	265
15-13 : Loop Keys	267
15-14 : Programmable One-Touch Keys	269
15-16 : SIP Register ID Setup for Extension	271
15-18 : Virtual Extension Key Enhanced Options	273
15-19 : System Telephone Book Setup for Extension	275
15-20 : LCD Line Key Name Assignment	277
15-22 : Mobile Extension Setup	279

Table of Contents

Program 16 : Department Group Setup	281
16-01 : Department Group Basic Data Setup	281
16-02 : Department Group Assignment for Extensions	284
16-03 : Secondary Department Group	286
16-04 : Call Restriction Between Department Groups	288
Program 20 : System Option Setup	291
20-01 : System Options	291
20-02 : System Options for Multi-Line Terminals	293
20-03 : System Options for Single Line Terminals	297
20-04 : System Options for Virtual Extensions	300
20-05 : Charging Cost Service	302
20-06 : Class of Service for Extensions	303
20-07 : Class of Service Options (Administrator Level)	305
20-08 : Class of Service Options (Outgoing Call Service)	308
20-09 : Class of Service Options (Incoming Call Service)	311
20-10 : Class of Service Options (Answer Service)	313
20-11 : Class of Service Options (Hold/Transfer Service)	315
20-12 : Class of Service Options (Charging Cost Service)	318
20-13 : Class of Service Options (Supplementary Service)	319
20-14 : Class of Service Options for DISA/E&M	324
20-15 : Ring Cycle Setup	327
20-16 : Selectable Display Messages	329
20-17 : Operator's Extension	332
20-18 : Service Tone Timers	334
20-19 : System Options for Caller ID	336
20-20 : Message Setup for Non-Caller ID Data	338
20-21 : System Options for Long Conversation	339
20-22 : System Options for IP DECT Service	341
20-23 : System Options for CTI	343
20-25 : ISDN Options	345
20-28 : System Option for Trunk to Trunk Conversations	347
20-29 : Timer Class for Extensions	349
20-30 : Timer Class for Trunks	351
20-31 : Timer Data	353
20-34 : Remote Conference Group Setup	357
Program 21 : Outgoing Call Setup	359
21-01 : System Options for Outgoing Calls	359
21-02 : Trunk Group Routing for Extensions	362
21-03 : Trunk Group Routing for Trunks	364
21-04 : Toll Restriction Class for Extensions	366
21-05 : Toll Restriction Class	368

Table of Contents

21-06 : Toll Restriction Table Data Setup	371
21-07 : Toll Restriction Override Password Setup	374
21-08 : Repeat Dial Setup	376
21-09 : Dial Block Setup	378
21-10 : Dial Block Restriction Class Per Extensions	380
21-11 : Extension Ringdown (Hotline) Assignment	382
21-12 : ISDN Calling Party Number Setup for Trunks	384
21-13 : ISDN Calling Party Number Setup for Extensions	386
21-14 : Walking Toll Restriction Password Setup	388
21-15 : Individual Trunk Group Routing for Extensions	390
21-16 : Trunk Group Routing for Networks	392
21-17 : IP (H.323/SIP) Trunk Calling Party Number Setup for Trunks	394
21-18 : IP (H.323) Trunk Calling Party Number Setup for Extensions	396
21-19 : IP (SIP) Trunk Calling Party Number Setup for Extensions	398
21-21 : Toll Restriction Class for Trunks	400
Program 22 : Incoming Call Setup	403
22-01 : System Options for Incoming Calls	403
22-02 : Incoming Call Trunk Setup	405
22-03 : Trunk Ring Tone Range	407
22-04 : Incoming Extension Ring Group Assignment	409
22-05 : Incoming Trunk Ring Group Assignment	411
22-06 : Normal Incoming Ring Mode	413
22-07 : DIL Assignment	415
22-08 : DIL/IRG No Answer Destination	417
22-09 : DID Basic Data Setup	419
22-10 : DID Translation Table Setup	421
22-11 : DID Translation Number Conversion	423
22-12 : DID Intercept Ring Group	426
22-13 : DID Trunk Group to Translation Table Assignment	428
22-14 : VRS Delayed Message for IRG	430
22-15 : VRS Waiting Message for Department Group	432
22-16 : Private Call Refuse Target Area Setup	434
22-17 : DID Conversion Table Area Setup for Time Pattern Mode	436
22-18 : Private Call Assignment	438
22-20 : Flexible Ringing by Caller ID Per Time Pattern	440
Program 23 : Answer Features Setup	443
23-02 : Call Pickup Groups	443
23-03 : Universal Answer/Auto Answer	445
23-04 : Ringing Line Preference for Virtual Extensions	447

Table of Contents

Program 24 : Hold/Transfer Setup	449
24-01 : System Options for Hold	449
24-02 : System Options for Transfer	451
24-03 : Park Group	454
24-04 : Automatic Trunk-to-Trunk Transfer Target Setup	456
24-05 : Department Group Transfer Target Setup	458
24-06 : Fixed Call Forwarding	460
24-07 : Fixed Call Forwarding Off-Premise	462
24-08 : Call Forwarding with Centrex	464
Program 25 : VRS/DISA Setup	467
25-01 : VRS/DISA Line Basic Data Setup	467
25-02 : VRS/DISA VRS Message	469
25-03 : VRS/DISA Transfer Ring Group With Incorrect Dialing	471
25-04 : VRS/DISA Transfer Ring Group With No Answer/Busy	473
25-05 : VRS/DISA Error Message Assignment	475
25-06 : VRS/DISA One-Digit Code Attendant Setup	477
25-07 : System Timers for VRS/DISA	479
25-08 : DISA User ID Setup	482
25-09 : Class of Service for DISA Users	483
25-10 : Trunk Group Routing for DISA	485
25-11 : DISA Toll Restriction Class	487
25-12 : Alternate Trunk Group Routing for DISA	489
25-13 : System Option for DISA	491
Program 26 : ARS Service	493
26-01 : Automatic Route Selection Service	493
26-02 : Dial Analysis Table for ARS/LCR	495
26-03 : ARS Dial Treatments	497
26-04 : ARS Class of Service	499
26-05 : LCR Carrier Table	500
26-06 : LCR Authorization Table	501
26-07 : LCR Cost Center Code Table	502
26-08 : LCR Manual Override Access Code Table	503
26-09 : LCR Manual Override Exemption Table	504
26-11 : Transit Network ID Table	505
Program 30 : DSS/DLS Console Setup	507
30-01 : DSS Console Operating Mode	507
30-02 : DSS Console Extension Assignment	509
30-03 : DSS Console Key Assignment	511

Table of Contents

30-04 : Alternate DSS Console Extension Assignment	521
30-05 : DSS Console Lamp Table	523
30-10 : DSS Console IP Terminal Setup	526
Program 31 : Paging Setup	529
31-01 : System Options for Internal/External Paging	529
31-02 : Internal Paging Group Assignment	531
31-03 : Internal Paging Group Settings	533
31-04 : External Paging Zone Group	536
31-05 : Universal Night Answer/Ring Over Page	538
31-06 : External Speaker Control	540
31-07 : Combined Paging Assignments	542
31-08 : BGM on External Paging	544
Program 32 : Door Box and Sensor Setup	547
32-01 : Door Box Timers	547
32-02 : Door Box Ring Assignment	549
32-03 : Door Box Basic Setup	551
32-04 : Door Box Name Setup	553
Program 33 : CTA and ACI Setup	555
33-01 : ACI Port Type Setup	555
33-02 : ACI Department Calling Group	557
Program 34 : Tie Line Setup	559
34-01 : E&M Tie Line Basic Setup	559
34-02 : E&M Tie Line Class of Service	561
34-03 : Trunk Group Routing for E&M Tie Lines	563
34-04 : E&M Tie Line Toll Restriction Class	565
34-05 : Tie Line Outgoing Call Restriction	567
34-06 : Add / Delete Digit for E&M Tie Line	569
34-07 : E&M Tie Line Timer	571
34-08 : Toll Restriction Data for E&M Tie Lines	573
34-09 : ANI/DNIS Service Options	575
34-10 : Digit Delete for T1 ANI	578
Program 35 : SMDR and Account Code Setup	581
35-01 : SMDR Options	581
35-02 : SMDR Output Options	583
35-03 : SMDR Port Assignment for Trunk Group	586
35-04 : SMDR Port Assignment for Department Groups	588
35-05 : Account Code Setup	590
35-06 : Verified Account Code Table	592

Table of Contents

Program 40 : Voice Mail Setup	595
40-01 : Voice Mail Basic Setup	595
40-02 : Mailbox Setup	596
40-03 : Message Recording Setup	597
40-04 : Live Recording Setup	598
40-05 : Call Information Setup	599
40-06 : Voice Mail Automated Attendant Data Setup	600

Introduction to Programming

Before You Start Programming

Before Reading This Section

This manual provides you with detailed information about the UX5000 programs. By changing a program, you change the way the feature associated with that program works. In this manual, you find out about each program, the features that the program affects and how to enter the program data into UX5000 memory.

Do not start customizing your UX5000 without first reading the UX5000 Software Features Manual, P/N 0913201.

When you want to customize a feature, find it in Software Features Manual and learn about it. The Software Features Manual will tell you what programs you have to change to get the operation you want. Then, look the program up in this manual if you have any questions about how to enter the data.

How to Use This Section

This manual lists each program in numerical order. For example, Program 10-01 is at the beginning of the manual and Program 92-01 is at the end. The information on each program is subdivided into the following headings:

Description describes what the program options control. The Default Settings for each program are also included. When you first install the UX5000, it uses the Default Setting for all programs. Along with the Description are the *Conditions* which describe any limits or special considerations that may apply to the program.

The reverse type (white on black) just beneath the Description heading is the program's access level. You can only use the program if your access level meets or exceeds the level the program requires. Refer to **How to Enter the Programming Mode** (page 2) for a list of the UX5000's access levels and passwords.

Feature Cross Reference provides you with a table of all the features affected by the program. You'll want to keep the referenced features in mind when you change a program. Customizing a feature may have an effect on another feature that you didn't intend.

Terminal Programming Instructions shows you how to enter the program's data into UX5000 memory. For example:

1. Enter the programming mode.
2. 15-07-01

```
15-07-01 TEL301
KY01 = *01
←                →
```

tells you to enter the programming mode, dial 150701 from the terminal dial pad. After you do, you'll see the message "15-07-01 TEL301" on the first line of the terminal display. This indicates the program number (15-07), item number (01), and that the options are being set for extension 301. The second row of the display "KY01 = *01" indicates that Key 01 is being programmed with the entry of *01. The third row allows you to move the cursor to the left or right, depending on which arrow is pressed. To learn how to enter the programming mode, see **How to Enter the Programming Mode** below.

Introduction to Programming

Before You Start Programming

How to Enter the Programming Mode

To enter the programming mode:

1. Go to any working display terminal.
In a newly installed UX5000, use extension 301 (port 1).
Programming access may be restricted based on the type of program entry used and if other users are connected to the UX5000 for programming purposes.
PC Pro: Only one user allowed access to the UX5000 programming at a time.
WebPro: Up to 4 WebPro or TelPro users can be connected at the same time.
TelPro: Up to 4 TelPro or WebPro users can be connected at the same time.

2. Do not lift the handset.
3. Press CALL1.
4. # * # *

Password

5. Dial the UX5000 password + HOLD.
Refer to the following table for the default UX5000 passwords. To change the passwords, use Program 90-02.

Password	User Name	Level	Programs at this Level
12345678	UX5000	2 (IN)	All programs in this section not listed below for SA and SB
0000	ADMIN1	3 (SA)	10-01, 10-02, 10-12, 10-13, 10-14, 10-15, 10-16, 10-17, 10-18, 10-22, 10-23, 10-24, 10-25, 10-27, 10-28, 10-29, 10-31, 12-02, 12-03, 12-04, 12-08, 13-04, 13-05, 15-01, 15-07, 15-09, 15-10, 15-11, 15-14, 20-16, 20-34, 21-07, 21-14, 22-04, 22-11, 22-17, 25-08, 30-03, 30-04, 32-02, 40-02, 41-02, 41-03, 41-04, 41-05, 41-06, 41-07, 41-08, 41-09, 41-10, 41-11, 41-12, 41-13, 41-14, 41-15, 41-16, 41-17, 41-18, 41-19, 41-20, 45-02, 45-03, 84-22, 90-03, 90-04, 90-06, 90-07, 90-19
9999	ADMIN2	4 (SB)	13-04, 13-05, 15-14

Note: When changes are made to the following programs, the UX5000 must be restarted.

10-12-01	10-16-01	80-02-03	84-04	84-06-07
10-12-02	10-16-02	80-02-04	84-05-01	84-06-08
10-12-03	10-16-03	80-03	84-05-02	84-06-09
10-12-04	10-16-04	80-04	84-06-01	84-06-10

10-13-02	47-01-01	84-03-02	84-06-03	84-09
10-13-03	80-01	84-03-06	84-06-04	84-10
10-14	80-02-01	84-03-07	84-06-05	
10-15	80-02-02	84-03-08	84-06-06	

How to Exit the Programming Mode

To exit the programming mode:

When you are done programming, you must be out of a program's options to exit (pressing the MIC key will exit the program's option).

1. Press MIC key to exit the program's options, if needed.

Program Mode
Base Service OP1 OP2

2. Press SPK. You see, "Saving System Data".
3. The display shows "Complete Data Save" when completed and will exit the terminal to an idle mode.

To save a customer's database, plug a USB thumb drive into the CPU and, using Program 90-03, save the software to the USB drive. (Program 90-04 is used to reload the customer data if necessary.) Note that a USB thumb drive can only hold one customer database unless the files are moved into a separate folder on the thumb drive after it is saved from the UX5000. Otherwise, the next time a database is saved, it will override the existing database.

Users are automatically logged out of terminal programming and WebPro when there is no activity based on the entry in Program 20-01-12.

Introduction to Programming

Before You Start Programming

Using Keys to Move Around in the Programs

Once you enter the programming mode, use the keys in the following chart to enter data, edit data and move around in the menus.

Keys for Entering Data	
Use this key...	When you want to . . .
0-9 and *	Enter data into a program.
HOLD	Complete the programming step you just made (like pressing Enter on a PC keyboard). When a program entry displays, press HOLD to bypass the entry without changing it.
CONF	Delete the entry to the left (like pressing Backspace on a PC keyboard).
MIC	Exit one step at a time from the program window currently being viewed. For example, if you're programming item 5 in 15-03, pressing MIC will allow you to enter a new option in program 15-03. Pressing MIC again will allow you to select a new program in the 15- series. Pressing MIC a third time will allow you to enter a new program beginning with '1'. Pressing MIC one last time will bring you to the beginning program display, allowing you to enter any program number.
FLASH	Switch extension, line, etc. being programmed by pressing FLASH. The cursor moves up to the top row of the display. Pressing FLASH again moves the cursor back to the middle row.
LINE KEYS	Use pre-programmed settings to help with the program entry. These settings vary between programs from LINE 1 = 0 (off) and LINE 2 = 1 (on) to preset values for timers where LINE 1 = 5, LINE 2 = 10, LINE 3 = 15, etc. For programs with this option, the line key which currently matches the programmed setting will light steady. The display may also indicate Soft Keys which will allow you to select the values as well (-1 and +1 will step through these pre-programmed settings.)
LINE KEY 1	Program a pause into an Abbreviated Dialing bin.
LINE KEY 2	Program a recall/flash into an Abbreviated Dialing bin.
LINE KEY 3	Program a @ into an Abbreviated Dialing bin.
VOL ▲	Scroll backward through a list of entry numbers (e.g., from extension 301 to 302, 303, etc.) or through entries in a table (e.g., Common Permit Table). <i>If you enter data and then press this key, the UX5000 accepts the data before scrolling forward.</i>
VOL ▼	Scroll forward through a list of entry numbers (e.g., from extension 301 to 302, 303, etc.) or through entries in a table (e.g., Common Permit Table). <i>If you enter data and then press this key, the UX5000 accepts the data before scrolling backward</i>

Introduction to Programming Before You Start Programming

Programming Names and Text Messages

Several programs (e.g., Program 20-16: Selectable Display Messages) require you to enter text. Use the following chart when entering and editing text. When using the keypad digits, press the key once for the first character, twice for the second character, etc. For example, to enter a C, press key “2” three times. Press the key six times display the lower case letter. The name can be up to 12 digits long.

Use this keypad digit . . .	When you want to . . .
1	Enter characters: 1 @ [¥] ^ _ ` { } → ← Á À Â Ã Ä Ç È É Ê Ì Ó 0
2	Enter characters A-C, a-c, 2.
3	Enter characters D-F, d-f, 3.
4	Enter characters G-I, g-i, 4.
5	Enter characters J-L, j-l, 5.
6	Enter characters M-O, m-o, 6.
7	Enter characters P-S, p-s, 7.
8	Enter characters T-V, t-v, 8.
9	Enter characters W-Z, w-z, 9.
0	Enter characters: 0 ! “ # \$ % & ’ () ô o ú å ä ö ü α ε θ
*	Enter characters: * + , - . / : ; < = > ? π Σ σ Ω ∞ ϕ ε
#	# = Accepts an entry (only required if two letters on the same key are needed - ex: TOM). Pressing # again = Space. (In UX5000 programming mode, use the right arrow soft key instead to accept and/or add a space.)
CONF	Clear the character entry one character at a time.
CLEAR	Clear all the entries from the point of the flashing cursor and to the right.

Introduction to Programming

Before You Start Programming

Using Soft Keys For Programming

Each UX5000 display terminal provides interactive soft keys for intuitive feature access. The options for these keys will automatically change depending on where you are in the UX5000 programming. Simply press the Soft Key located below the option you wish and the display will change accordingly.

Pressing the VOLUME ▲ or VOLUME ▼ will scroll between the menus.

What the Soft Key Display Prompts Mean

When using a display terminal in programming mode, you will see various Soft Key options displayed. These keys will allow you to easily select, scan, or move through the programs.

Soft key Display Prompts	
If you press this Soft Key . . .	The UX5000 will. . .
back	Go back one step in the program display. You can press VOLUME ▲ or VOLUME ▼ to scroll forwards or backwards through a list of Programs.
↑	Scroll down through the available programs.
↓	Scroll up through the available programs.
select	Select the currently displayed program.
←	Move the cursor to the left.
→	Move the cursor to the right.
-1	Move back through the available program options.
+1	Move forward through the available program options.

Program 10 : System Configuration Setup

10-08 : Pre-Ringing Setup

Level:

IN

Feature Availability

- Available.

Description

Use **Program 10-08 : Pre-Ringing Setup** to enable or disable pre-ringing for trunk calls. This sets how a trunk initially rings a terminal. With pre-ringing, a burst of ringing occurs as soon as the trunk's LED flashes. The call then continues ringing with the normal ring cadence cycle. Without pre-ringing, the call starts ringing only when the normal ring cadence cycle occurs. This may cause a ring delay, depending on when call detection occurs in reference to the ring cycle.

Input Data

Item No.	Description	Input Data	Default
01	Pre-Ringing Setup	0 = disable 1 = enable	0

Conditions

None

Feature Cross Reference

- Central Office Calls, Answering

Terminal Programming Instructions

To enter data for Program 10-08 (Pre-Ringing Setup):

1. Enter the programming mode.
2. 10 08

```
10-08-01
Pre-ringing  0:No

OR
Press MIC until you've exited that series's programming section.

Program 10 : System Configuration Setup

10-09 : DTMF and Dial Tone Circuit Setup

Level:

IN

Feature Availability

- Available.

Description

Use **Program 10-09 : DTMF and Dial Tone Circuit Setup** to allocate the circuits on the CPU blades for either DTMF receiving or dial tone detection. The CCPU blade has 32 circuits initially. On the UX5000, with an EXIFU installed, an additional 64 circuits are provided. These are used as follows:

- Extension DTMF receiver for SLT
- Trunk DTMF receiver for analog trunks, dial tone & busy tone detection for analog trunks

Input Data

Circuit/Resource Number	01-160
-------------------------	--------

Item No.	Input Data	Default Setting
01	0 = Common use 1 = Extension only 2 = Trunk only	Circuit/Resource 01-08: 1 (Extension only) Circuit/Resource 09-32: 2 (Trunk only) Circuit/Resource 97-160: 0 (Common use) [requires EXIFU] (Resources 33-96 are not used/dummy ports.)

Conditions

An EXIFU blade must be installed to access resources 97-160.

Feature Cross Reference

- Caller ID
- Central Office Calls, Placing
- Direct Inward Dialing (DID)
- Direct Inward System Access (DISA)
- Tie Lines

Program 10 : System Configuration Setup

10-12 : CCPU Network Setup

Level:

SA

Feature Availability

- Available.

Description

Use **Program 10-12 : CCPU Network Setup** to setup the IP Address, Subnet-Mask, and Default Gateway addresses of the CCPU and EXIFU.

Input Data

Item No.	Item	Input Data	Default
01	IP Address Set the IP address for the CCPU.	0.0.0.0 ~ 126.255.255.254 128.0.0.1 -191.255.255.254 192.0.0.1 ~ 223.255.255.254	Slot 1: 192.168.0.10 Slot 4: 192.168.0.13
02	Subnet Mask The setting of Subnet Mask errors when all Host Addresses are 0. If the network section is: 0, 127 128.0 191.255 192.0.0 223.255.255 The setting of Subnet Mask errors.	128.0.0.0 192.0.0.0 224.0.0.0 240.0.0.0 248.0.0.0 252.0.0.0 254.0.0.0 255.0.0.0 255.128.0.0 255.192.0.0 255.224.0.0 255.240.0.0 255.248.0.0 255.252.0.0 255.254.0.0 255.255.0.0 255.255.128.0 255.255.192.0 255.255.224.0 255.255.240.0 255.255.248.0 255.255.252.0 255.255.254.0 255.255.255.0 255.255.255.128 255.255.255.192 255.255.255.224 255.255.255.240 255.255.255.248 255.255.255.252 255.255.255.254 255.255.255.255	255.255.255.0
03	Default Gateway IP Address for Router	0.0.0.0 ~ 126.255.255.254 128.0.0.1 ~ 191.255.255.254 192.0.0.1 ~ 223.255.255.254	0.0.0.0
04	Time Zone Enter the difference for standard time.	0 ~ 24 (-12 thru +12 Hours)	7 Hours
05	NIC NIC Auto Negotiate	0 = Auto Detect 1 = 100Mbps, Full Duplex 2 = 100Mbps, Half Duplex 3 = 10Mbps, Full Duplex 4 = 10Mbps, Half Duplex	0
06	NAT Router Setup Enable or disable the NATP Router Setup. With SIP trunking behind a NATP router, this must be set to enabled.	0=Disable, 1=Enable	0

Program 10 : System Configuration Setup

10-12 : CCPU Network Setup

07	Default Gateway (WAN Side) IP Address Set the Default Gateway's IP Address. With SIP trunking, the IP address of the WAN side of the router must be entered.	0.0.0.0 - 126.255.255.254 128.0.0.1 - 191.255.255.254 192.0.0.1 - 223.225.225.254	0.0.0.0																																	
08	ICMP Redirect When the UX5000 receives the ICMP REDIRECT message, determine whether the IP routing table is automatically updated.	0=Enable (Update Automatically) 1=Disable (No Automatic Update)	0																																	
09	VoIP Daughter Board IP Address Set the LAN IP address for the 32, 64 and 128 channel VoIP daughter boards. The IP number increases by one for each increase in the slot number.	0.0.0.0 ~ 126.255.255.254 128.0.0.1 -191.255.255.254 192.0.0.1 ~ 223.255.255.254	172.16.0.10																																	
10	VoIP Daughter Board Subnet Mask Define the subnet mask for the 32, 64 and 128 channel VoIP daughter boards. The setting of Subnet Mask errors when all Host Addresses are 0. If the network section is: 0, 127 128.0 191.255 192.0.0 223.255.255 The setting of Subnet Mask errors.	<table style="width: 100%; border-collapse: collapse;"> <tr> <td style="width: 33%;">128.0.0.0</td> <td style="width: 33%;">192.0.0.0</td> <td style="width: 33%;">224.0.0.0</td> </tr> <tr> <td>240.0.0.0</td> <td>248.0.0.0</td> <td>252.0.0.0</td> </tr> <tr> <td>254.0.0.0</td> <td>255.0.0.0</td> <td>255.128.0.0</td> </tr> <tr> <td>255.192.0.0</td> <td>255.224.0.0</td> <td>255.240.0.0</td> </tr> <tr> <td>255.248.0.0</td> <td>255.252.0.0</td> <td>255.254.0.0</td> </tr> <tr> <td>255.255.0.0</td> <td>255.255.128.0</td> <td>255.255.192.0</td> </tr> <tr> <td>255.255.224.0</td> <td>255.255.240.0</td> <td>255.255.248.0</td> </tr> <tr> <td>255.255.252.0</td> <td>255.255.254.0</td> <td>255.255.255.0</td> </tr> <tr> <td>255.255.255.128</td> <td>255.255.255.192</td> <td>255.255.255.224</td> </tr> <tr> <td>255.255.255.240</td> <td>255.255.255.248</td> <td>255.255.255.252</td> </tr> <tr> <td>255.255.255.254</td> <td>255.255.255.255</td> <td></td> </tr> </table>	128.0.0.0	192.0.0.0	224.0.0.0	240.0.0.0	248.0.0.0	252.0.0.0	254.0.0.0	255.0.0.0	255.128.0.0	255.192.0.0	255.224.0.0	255.240.0.0	255.248.0.0	255.252.0.0	255.254.0.0	255.255.0.0	255.255.128.0	255.255.192.0	255.255.224.0	255.255.240.0	255.255.248.0	255.255.252.0	255.255.254.0	255.255.255.0	255.255.255.128	255.255.255.192	255.255.255.224	255.255.255.240	255.255.255.248	255.255.255.252	255.255.255.254	255.255.255.255		255.255.0.0

255.255.255.254	255.255.255.255																																			
11	VoIP Daughter Board NIC Define the NIC setting for the VoIP daughter board. With auto negotiate, the destination sets the ability (from 1-4) based on the ability of the connected device.	0 = Auto Detect 1 = 100Mbps, Full Duplex 2 = 100Mbps, Half Duplex 3 = 10Mbps, Full Duplex 4 = 10Mbps, Half Duplex	0																																	
12	VoIP Daughter Board ICMP Redirect When the UX5000 receives the ICMP REDIRECT message, determine whether the IP routing table is automatically updated for the 32, 64 and 128 channel VoIP daughter boards.	0=Enable (Update Automatically) 1=Disable (No Automatic Update)	0																																	

Conditions

The UX5000 must be reset in order for these changes to take affect.

Program 10 : System Configuration Setup

10-12 : CCPU Network Setup

Feature Cross Reference

- VoIP

Terminal Programming Instructions

To enter data for Program 10-12 (CPU Network Setup):

1. Enter the programming mode.
2. 10 12

```
10-12-01
IP_Add  172.16 .0 .10
back  ↑      ↓  select
```

3. Enter the number of the item you want to program.

```
10-12-nn  Slot No.  n
nnnnn
←          →
```

4. Enter the slot number to be defined or press FLASH to use the displayed entry.
5. Enter data for the item you selected + HOLD.
6. Enter data for the next item in the program.
OR
Press MIC once to enter a new item number.
OR
Press MIC until you've exited that series's programming section.

Program 10 : System Configuration Setup

10-13 : In-DHCP Server Setup

Level:
SA

Feature Availability

- Available.

Description

Use **Program 10-13 : In-DHCP Server Setup** to setup the DHCP Server built into the CPU.

Input Data

Item No.	Item	Input Data	Default	Description
01	DHCP Server Mode	0 = Disabled 1 = Enabled	0	Enable or disable the use of the built-in DHCP Server.
02	Lease Time PCPro/WebPro provides a maintenance function to display the extension number, MAC address, IP address and expiration date of a lease. If an extension is not available, this column will only display “-”.	Days 0-255	0 day	Lease Time of the IP address to a client.
		Hour 0-23	0 hour	
		Minutes 0-59	30 minutes	
03	Not used			
04	Not used			
05	Last DHCP Data	0 = Disabled 1 = Enabled	1	Determine whether DHCP lease information that has previously been set was successful.

Program 10 : System Configuration Setup

10-13 : In-DHCP Server Setup

Terminal Programming Instructions

To enter data for Program 10-13 (In-DHCP Server Setup):

1. Enter the programming mode.
2. 10 13

```
10-13-01
DCHP-Serv_Mode0:Off
back ↑ ↓ select
```

3. Enter the number of the item you want to program.

```
10-13-nn
nnnnn
← →
```

4. Enter data for the item you selected + HOLD.
5. Enter data for the next item in the program.
OR
Press MIC once to enter a new item number.
OR
Press MIC until you've exited that series's programming section.

Program 10 : System Configuration Setup

10-14 : Managed Network Setup

Level:

SA

Feature Availability

- Available.

Description

Use **Program 10-14 : Managed Network Setup** to set up the range of the IP address which the DHCP Server leases to a client.

Input Data

Item No.	Description	Input Data	Default	Related Program
01	The range of the IP address to lease. When "Maximum" has not been entered, the maximum value equals the minimum value.	Minimum: 0.0.0.0 ~ 126.255.255.254 128.0.0.0 ~ 191.255.255.254 192.0.0.0 ~ 223.255.255.254	172.16.0.100	10-13-04
		Maximum: 0.0.0.0 ~ 126.255.255.254 128.0.0.0 ~ 191.255.255.254 192.0.0.0 ~ 223.255.255.254	172.16.5.254

To enter data for Program 10-16 (Option Information Setup):

1. Enter the programming mode.
2. 10 16

```
10-16-01
Router_Code_No3
back ↑ ↓ select
```

3. Enter the number of the item you want to program.

```
10-16-nn
nnnnn
← →
```

4. Enter data for the item you selected + HOLD.
5. Enter data for the next item in the program.
OR
Press MIC once to enter a new item number.
OR
Press MIC until you've exited that series's programming section.

Program 10 : System Configuration Setup

10-17 : H.323 Gatekeeper Setup

Level:

SA

Feature Availability

- Available.

Description

Use **Program 10-17 : H.323 Gatekeeper Setup** to define the H.323 Gatekeeper.

Input Data

Item No.	Item	Input Data	Default	Description	Related Program
01	Gatekeeper mode	0:No GK 1:Automatic 2:Manual	0	An external gatekeeper uses proprietary set up. 1 = No GK: A gatekeeper is not used 2 = Automatic: A gatekeeper is searched and assigned 3 = Manual: A gatekeeper's IP address is used (assigned in 10-17-02).	10-17-02 10-17-04
02	Gatekeeper IP address	IP address 1.0.0.1 ~ 126.255.255.254 128.1.0.1 -191.254.255.254 192.0.1.1 ~ 223.255.254.254	0.0.0.0	Unicast IP address of the External GK.	This item is effective only when Program 10-17-01 is set to Manual (2) .
03	Not used				
04	Preferred Gatekeeper	Character line (Max 124)	No Setting	When registering with an external gatekeeper using gatekeeper search, two or more GRQ(s) may be assigned. In this case, if this ID is set up, it will register with a gatekeeper with this ID.	This item is effective only when Program 10-17-01 is set to Automatic (1) .

Program 10 : System Configuration Setup

10-17 : H.323 Gatekeeper Setup

Terminal Programming Instructions

To enter data for Program 10-17 (H.323 Gatekeeper Setup):

1. Enter the programming mode.
2. 10 17

```
10-17-01
GK_Mode      0:None
back  ↑      ↓  select
```

3. Enter the number of the item you want to program.

```
10-17-nn
nnnnn
←          →
```

4. Enter data for the item you selected + HOLD.
5. Enter data for the next item in the program.
OR
Press MIC once to enter a new item number.
OR
Press MIC until you've exited that series's programming section.

Program 10 : System Configuration Setup

10-18 : H.323 Alias Address Setup

Level:
SA

Feature Availability

- Available.

Description

Use **Program 10-18 : H.323 Alias Address Setup** to set up the Alias Address registered into the External Gatekeeper.

Input Data

The number of alias	1 - 6
---------------------	-------

Item No.	Item	Input Data	Default	Description
01	Alias Address	Maximum 12 digits (0-9, *, #)	No setup	Define the Alias Address of the UX5000 registered into the External Gatekeeper. At this time, it is only the telephone number which can be registered as an Alias Address. In the future, other types of addresses will be available.
02	Type of Alias Address	0 = E164	0	Define the type of Alias Address registered into the external gatekeeper. Currently the only type is E.164. However, in the future, other types will also be available.

Program 10 : System Configuration Setup

10-28 : SIP Trunk Basic Setup

Level:

SA

Feature Availability

- Available.

Description

Use **Program 10-28 : SIP Trunk Basic Setup** to set the basic options used for SIP trunks.

Input Data

Item No.	Item	Input Data	Default	Related Program
01	Domain Name Define the Domain name. This information is generally provided by the SIP carrier.	64 characters maximum	None	
02	Host Name Define the Host name. This information is generally provided by the SIP carrier.	48 characters maximum	None	
03	Transport Protocol Define the Transport type. This option will always be set to UDP.	0 = UDP 1 = TCP	0	
04	User ID Define the User ID. Note: If Program 10-23-04 for UX5000 interconnection, this entry must be numeric as 10-23-04 does not allow text entry - only numeric. This information is generally provided by the SIP carrier.	32 characters maximum	No Entry	21-17 21-19
05	Domain Assignment Define the Domain Assignment. This entry is determined by what information the SIP carrier provides. If the SIP carrier provides a server name: SIPconnect-sca.atL0.cbeyond.net , then the domain would be: atL0.cbeyond.net and the host name would be SIPconnect-sca .	0 = IP Address 1 = Domain name	0	
06	IP Trunk Port Binding If this entry is set to 0 (Disable), an incoming call uses the lowest port. If the entry is set to 1 (Enable), the incoming call uses the port assigned in 10-36. This could be required if a carrier provides more than one registration (one for each telephone number provided).	0 = Disable 1 = Enable	0	10-36-01

Program 10 : System Configuration Setup

10-29 : SIP Proxy Setup

Level:

SA

Feature Availability

- Available.

Description

Use **Program 10-29 : SIP Proxy Setup** to set the proxy options for SIP trunks.

Input Data

Item No.	Item	Input Data	Default	Related Program
01	SIP Proxy Setup - Default Outbound Proxy Define the SIP Proxy setup, Default Proxy (Outbound). When SIP trunking is used, this must be on. <i>Note; If entries are made in Program 10-29-xx for a SIP Server and the SIP Server is then removed or not used, the entries in Program 10-29-xx must be set back to their default settings. Even if 10-29-01 is set to "0" (off), the UX5000 will still check the settings in the remaining 10-29 programs.</i>	0=off, 1=on	0	
02	SIP Proxy Setup - Default Inbound Proxy Define the Default Proxy (inbound).	0=off, 1=on	0	
03	Default Proxy IP Address Enter the default Proxy IP Address if the SIP carrier is using an IP address for the proxy. In most cases, this will be left at the default entry as the domain name is used.	0.0.0.1-126.255.255.254 128.0.0.1 - 191.255.255.254 192.0.0.1 - 223.225.255.254	0.0.0.0	10-29-01 10-29-02
04	Default Proxy Trans. Port Define the Proxy Trans. port.	0-65535	5060	10-29-01 10-29-02
05	Registration Mode Define the mode for the registration server. This should always be set to manual when using SIP trunking.	0=None 1=Manual	0	
06	Registration IP Address Define the Registration IP Address. The carrier may provide an IP address. In most cases, a domain name will be used so this entry will be left at the default. This item is only used when Program 10-29-05 is set to "Manual".	0.0.0.1-126.255.255.254 128.0.0.1 - 191.255.255.254 192.0.0.1 - 223.225.255.254	0.0.0.0	10-29-05

Program 10 : System Configuration Setup

10-29 : SIP Proxy Setup

Item No.	Item	Input Data	Default	Related Program
07	Registration Server Trans Port Define the Registration Trans. port. This item is only used when Program 10-29-05 is set to "Manual".	0-65535	5060	10-29-05
08	DNS Server Mode Define the DNS Mode. If the SIP carrier provides a domain name, turn this option on.	0=off, 1=on	0	
09	DNS IP Address If Program 10-29-08 is enabled, define the DNS IP Address (normally provided by the SIP carrier). Enter the carrier-provided information or enter a valid DNS server IP address.	0.0.0.1 - 126.255.255.254 128.0.0.1 - 191.255.255.254 192.0.0.1 - 223.225.255.254	0.0.0.0	10-29-08
10	DNS Trans. Port If Program 10-29-08 is enabled, define the DNS Trans. port.	0-65535	53	10-29-08
11	Registrar Domain Name Define the Registrar Domain Name (normally provided by the SIP carrier). Example: SIPconnect-sca.atL0.cbeyond.net	128 characters maximum	No Entry	
12	Proxy Domain Name Define the Proxy Domain Name (UX5000 domain name).	64 characters maximum	No Entry	
13	Proxy Host Name Define the Proxy Host name (UX5000 proxy name).	48 characters maximum	No Entry	
14	SIP Carrier Choice Define the SIP Carrier Choice.	0=Default, 1=Carrier A, 2=Carrier B, 3=Carrier C, 4=Carrier D, 5=Carrier E, 6=Carrier F, 7=Carrier G	0	
15	Registration Expiry Time Define the Registration Expiry time - the time allowed to register with the SIP carrier. This should stay at the default entry.	120-65535 seconds	3600 seconds	
16	- Not Used -	-	0	
17	DNS Src Port Set the source port number of the DNS. When 10-29-08 is enabled, this port number is used.	0-65535	53

Terminal Programming Instructions

To enter data for Program 10-29 (SIP Proxy Setup):

1. Enter the programming mode.
2. 10 29

```
10-29-01
Dflt.Proxy(0B)  0:OFF
back  ↑        ↓  select
```

3. Enter the number of the item you want to program.

```
10-29-nn
nnnnn
←  -1  +1  →
```

4. Enter data for the item you selected + HOLD.
5. Enter data for the next item in the program.
OR
Press MIC once to enter a new item number.
OR
Press MIC until you've exited that series's programming section.

Program 10 : System Configuration Setup

10-30 : SIP Authentication Information

Level:

IN

Feature Availability

- Available.

Description

Use **Program 10-30 : SIP Authentication Information** to set the authentication options for SIP trunks.

Input Data

Item No.	Item	Input Data	Default	Related Program
01	- Not Used -			
02	User ID Define the authentication User name provided by the SIP carrier.	64 characters max	None	
03	Password Enter the authentication password provided by the SIP carrier. When the UX5000 registers its own ID with the carrier SIP server or makes an outgoing call via the carrier SIP server, the SIP server requests the authentication. This data is used as "Register ID 0".	32 characters max	None	
04	Authorization Trial Define the Authorization trial. When a call tries to register with the SIP carrier and they refuse, this entry determines how many times the UX5000 will send authorization.	1-9	1 time

Program 10 : System Configuration Setup

10-30 : SIP Authentication Information

Terminal Programming Instructions

To enter data for Program 10-30 (SIP Authentication Information):

1. Enter the programming mode.
2. 10 30

```
10-30-02
User Name
back ↑ ↓ select
```

3. Enter the number of the item you want to program.

```
10-30-nn
nnnnn
← →
```

4. Enter data for the item you selected + HOLD.
5. Enter data for the next item in the program.
OR
Press MIC once to enter a new item number.
OR
Press MIC until you've exited that series's programming section.

Program 10 : System Configuration Setup

10-31 : Networking Keep Alive Setup

Level:

IN

Feature Availability

- Available.

Description

Use **Program 10-31 : Networking Keep Alive Setup** to set the interval and retry count of the AspireNet networking keep alive message. The keep alive is used for ISDN and IP networking.

The keep alive message is automatically responded to by the destination UX5000, if the response is not received the retry count will start. If a response is not received within the number of retries the networking link will be taken out of service. When the link is taken out of service:

- Any calls that are in progress will be released.
- Park Hold orbits will be released.
- No further Park Hold information will be sent until the link is active.

The link will automatically become active when the next keep alive response is received.

Input Data

Item No.	Item	Input Data	Default	Related Program
01	Keep Alive Interval This program is used to set the interval of Keep Alive. The UX5000 does not send Keep alive when this item is set to "0". If this entry is greater than "0", networked PRI spans which are using Kentrox DSUs will not re-sync when removed from service then returned to service.	0-65535 seconds	0	
02	Keep Alive Retry Timer Set how many times the UX5000 resends Keep Alive.	1-255	5	
03	Time Synchronization The time signal is transmitted at 0:00 to all UX5000s every day when this option is set. When the signal is received, the slave or master (depending on the programmed option) of the same period of time corrects its time to 0:00.	0 = No Time Synchronization 1 = Synchronization Master 2 = Synchronization Slave	0	

Program 10 : System Configuration Setup

10-31 : Networking Keep Alive Setup

Conditions

The keep alive message must be sent and a response not received for the retry count, for the link to be taken out of service and the calls in progress and Park Hold orbits to be released.

For example: If an ISDN CygniLink connection is disconnected at Layer 1 then the keep alive message can not be sent, therefore the keep alive operation will not occur.

Feature Cross Reference

Networking - AspireNet

Terminal Programming Instructions

To enter data for Program 10-31 (Networking Keep Alive Setup):

1. Enter the programming mode.
2. 10 31

```
10-31-01
Interval 0 Sec.
back ↑ ↓ select
```
3. Enter the number of the item you want to program.

```
10-31-nn
nnnnn

```
4. Enter data for the item you selected + HOLD.
5. Enter data for the next item in the program.
OR
Press MIC once to enter a new item number.
OR
Press MIC until you've exited that series's programming section.

Program 10 : System Configuration Setup

10-32 : PRI Networking Channel Limitation

Level:
IN

Feature Availability	
<ul style="list-style-type: none"> Available. 	

Description

Use **Program 10-32 : PRI Networking Channel Limitation** to assign the number of B-channels to be used for each ISDN blade. This allows for fractional PRIs when used with multiple site networking. If this program is limited to less than "23" on one side of the network, then it also limits both inbound and outbound network calls. For example, when you select 10 channels then only channels 1 to 10 will be available. If a call is attempted on channels 11 to 30 the caller will receive busy tone. This also applies on the other side of the network as well.

The setting is for each slot within the UX5000; ensure that you select the correct slot before making any changes.

This program will not affect a PRI card set as Trunk or Station mode.

Input Data

Slot Number	1 - 24
-------------	--------

Item No.	Item	Input Data	Default	Related Program
01	Maximum Channels Set the maximum number of channels which can be used with PRI CygniLink.	1 - 23	23	

Conditions

None

Program 10 : System Configuration Setup

10-56 : XML Portal Page for IP Terminal

- For Your Notes -

Program 11 : System Numbering

11-01 : System Numbering

Level:

IN

Feature Availability

- Available.

Description

Use **Program 11-01 : System Numbering** to set the UX5000's internal (Intercom) numbering plan. The numbering plan assigns the first and second digits dialed and affects the digits an extension user must dial to access other extensions and features, such as service codes and trunk codes. If the default numbering plan does not meet the site requirements, use this program to tailor the system numbering to the site.

CAUTION

Improperly programming this option can adversely affect UX5000 operation. Make sure you thoroughly understand the default numbering plan before proceeding. If you must change the standard numbering, use the chart for **System Numbering** (page 122) to keep careful and accurate records of your changes.

Before changing your numbering plan, use the PC Program or Program 90-03 to make a backup copy of your UX5000's data.

Changing the numbering plan consists of three steps:

1. Enter the digits you want to change.
2. Specify the length of the code you select to change.
3. Assign a function to the code selected.

Step 1: Enter the digit(s) you want to change

You can make either single or two digit entries. In the Dialed Number column in the **System Numbering** (page 122) table, the nX rows (e.g., 1X) are for single digit codes. The remaining rows (e.g., 11, 12, etc.) are for two digit codes.

- Entering a single digit affects all the Dialed Number entries beginning with that digit. For example, entering 6 affects all number plan entries beginning with 6. The entries you make in step 2 and step 3 below affect the entire range of numbers beginning with 6. (For example, if you enter 3 in step 2 the entries affected would be 600-699. If you enter 4 in step 2 below, the entries affected would be 6000-6999.)
- Entering two digits lets you define codes based on the first two digits a user dials. For example, entering 60 allows you to define the function of all codes beginning with 60. In the default program, only * and # use two-digit codes. All the other codes are single digit. If you enter a two digit code between 0 and 9, be sure to make separate entries for all the other two digit codes within the range as well. This is because in the default program all the two digit codes between 0 and 9 are undefined.

Program 11 : System Numbering

11-01 : System Numbering

Step 2: Specify the length of the code you want to change

After you specify a single or two digit code, you must tell the UX5000 how many digits comprise the code. This is the **Number of Digits Required** column in the **System Numbering** (page 122) table. In the default program, all codes from 100-999 are three digits long. Codes beginning with 0 are one digit long. Codes beginning with * are 3 digits long and codes beginning with # are 4 digits long.

- If you are programming two digit codes in the PC Program, make sure the nX entry for **Number of Digits Required** is the maximum allowed by any of the two digit codes in the range. This is why the default **Number of Digits Required** entry for #X is four digits long. Even though #1-#9, #0 and ## entries require only two digits, #* requires four. If you inadvertently change #* to 2, you will no longer be able to enter #** to enter the programming mode.

Step 3: Assign a function to the code selected

After entering a code and specifying its length, you must assign its function. This is the Dial Type column in the **System Numbering** (page 122) table. The choices are:

Dial Types	Dial Type Description	Related Program
0	- Not Used -	
1	Service Code	11-10 : Service Code Setup (for System Administrator) 11-11 : Service Code Setup (for Registration) 11-12 : Service Code Setup (for Service Access) 11-13 : Service Code Setup (for ACD) 11-14 : Service Code Setup (for Hotel/Motel) 11-15 : Service Code Setup (Special access)
2	Extension Number	11-02 : Extension Numbers 11-04 : Virtual Extension Numbers 11-06 : 2PGDAD (ACI) Extension Numbers 11-07 : Department Calling Group Numbers 11-08 : 2PGDAD (ACI) Group Pilot Numbers
3	Trunk Access Code	11-09 : Trunk Access Code
4	Special Trunk Access	11-09 : Trunk Access Code
5	Operator Access	20-17 : Operator's Extension
6	ARS/F-Route Access	44-xx
8	CygniLink	10-03 : Blade Setup 10-12 : CPU (FEC 1) Network Setup 10-20 : LAN Setup for External Equipment 10-27 : IP System ID 10-44 : CPU (FEC 2) Network Setup

Program 11 : System Numbering

11-01 : System Numbering

- Changing the *Dial Type* for a range of codes can have a dramatic affect on how your UX5000 operates. Assume, for example, the site is a hotel that has room numbers from 100-399. In order to make extension numbers correspond to room numbers, you should:
 - Change the Dial Type for the digit 1 from 1 (Service Code) to 2 (extension number).
 - Change the Dial Type for the digit 7 from 2 (extension number) to 1 (Service Code).
 - In Program 11-02, reassign extension numbers on each floor from 100 to 399.
 - In Programs 11-10 through 11-15, reassign the Service Codes from the 100 series (e.g., 116) to the 700 series (e.g., 716). (Other applications might also require you to change entries in Program 11-10 through 11-15.)
 - Check Program 11-16 to be sure that the Single Digit Service Code 04 (digit 7) does not affect any post dial Service Codes codes in Programs 11-10 through 11-15. (Unless you changed codes from their default assignments, this would not be the case.)
 - In Program 45-01-03, enter “0” to disable Voice Mail Call Screening. If you left screening enabled, Voice Mail ports could call the wrong extensions. For example, a Voice Mail port trying to call screen extension 130 would outdial 1130. This would call extension 113 instead.

Extension numbers now will correspond to room numbers, and all the Service Codes in the 100 series will be in the 700 series.

Program 11 : System Numbering

11-02 : Extension Numbering

Level:

IN

Feature Availability

- Available.

Description

Use **Program 11-02 : Extension Numbering** to set the extension number. The extension number can be up to eight digits long. The first/second digit(s) of the number should be assigned in Program 11-01. This lets an employee move to a new location (port) and retain the same extension number.

Input Data

Extension Port Number	001-512
-----------------------	---------

Item No.	Extension Number	Description
01	Dial (Up to 8 digits)	<ul style="list-style-type: none">• Set up extension numbers for Key Terminals, Single Line Terminals (Including SLT and APR Adapters), and IP Terminals.• Extension number assignments cannot be duplicated.

Default

Extension Port Number	Extension Number
1-199	301-499
200-512	5000-5312

Conditions

None

Feature Cross Reference

- Department Calling
- Flexible System Numbering
- Intercom

Program 11 : System Numbering

11-09 : Trunk Access Code

Level:

IN

Feature Availability

- Available.

Description

Use **Program 11-09 : Trunk Access Code** to assign the trunk access code (normally 9). The trunk access code can be set from 1 to 8 digits which is defined to type 3 and 4 in Program 11-01. This is the code extension users dial to access Automatic Route Selection. The Individual Trunk Access Code is used when Trunk Group Routing is desired for an outgoing line.

Caution

The digit 9 is defined in Program 11-01 as Dial Type 3 with the Number of Digits Required set to 1. If you change the trunk access code in Program 11-09, you must make the corresponding changes in Program 11-01.

Input Data

Item No.	Item	Input Data	Default	Related Program
01	Trunk Access Code Use this program to assign the trunk access code (normally 9). This is the code extension users dial to access Automatic Route Selection.	Dial (Up to 4 digits)	9	<ul style="list-style-type: none"> • 11-01 : System Numbering • 14-01 : Trunk Basic Data Setup • 14-05 : Trunk Group • 14-06 : Trunk Group Routing
02	Alternate Trunk Route Access Code Use this program to define additional trunk access codes. When a user dials the Alternate Trunk Route Access Code, the UX5000 routes their call to the Alternate Trunk Route.	Dial (Up to 4 digits)	No setting	<ul style="list-style-type: none"> • 11-01 : System Numbering • 14-01 : Trunk Basic Data Setup • 14-05 : Trunk Group • 14-06 : Trunk Group Routing • 21-02 : Trunk Group Routing for Extensions • 21-15 : Alternate Trunk Group Routing for Extensions

Conditions

None

Feature Cross Reference

- Automatic Route Selection

Program 11 : System Numbering

11-10 : Service Code Setup (for System Administrator)

Level:

IN

Feature Availability

- Available.

Description

Use **Program 11-10 : Service Code Setup (for System Administrator)** to customize the Service Codes for the System Administrator. You can customize additional Service Codes in Programs 11-11 through 11-16. The following chart shows:

- The number of each code (01-27)
- The function of the Service Code.
- What type of terminals can use the Service Code
- The code's default entry. For example, dialing *3 (item 26) allows users to force a trunk line to disconnect.
- Programs that may be affected with the changing the code.

If you change a Service Code, be sure to record your entry in the "New" column.

To enter data for Program 11-11 (Service Code Setup (for Setup/Entry Operation)):

1. Enter the programming mode.
2. 11 11

```

11-11-01
Call_Forward-Imm901
back ↑ ↓ select
```

3. Enter the number of the item you want to program.

```

11-11-nn
nnnnnn
← →
```

4. Enter data for the item you selected + HOLD.
5. Enter data for the next item in the program.
 OR
 Press MIC once to enter a new item number.
 OR
 Press MIC until you've exited that series's programming section.

Program 11 : System Numbering

11-12 : Service Code Setup (for Service Access)

Level:

IN

Feature Availability

- Available.

Description

Use **Program 11-12 : Service Code Setup (for Service Access)** to customize the Service Codes which are used for service access. You can customize additional Service Codes in Programs 11-10, 11-11, and 11-13 through 11-16. The following chart shows:

- The number of each code (01-48)
- The function of the Service Code.
- What type of terminals can use the Service Code
- The code's default entry. For example, dialing 805 (code 05) will cancel a previously set Camp-On.
- Programs that may be affected with the changing the code.

If you change a Service Code, be sure to record your entry in the "New" column.

For "8xx" service codes used after dialing an extension (post-dialing), Program 11-16-09 (Single Digit Voice Mail code) must be deleted or changed from the default entry of "8" for the service codes to work.

Input Data

Item No.	Item	Terminals	Default	New	Related Program
01	Call Forwarding / Do Not Disturb Override Activating Call Forwarding/Do Not Disturb Override. This code is only available if you disable the voice mail Single Digit dialing code in Program 11-16-09.	KTS, SLT	807		11-16-09

To enter data for Program 11-12 (Service Code Setup (for Service Access)):

1. Enter the programming mode.
2. 11 12

```
11-12-01
Bypass_Call 801
back ↑ ↓ select
```

3. Enter the number of the item you want to program.

```
11-12-nn
nnnnn
← →
```

4. Enter data for the item you selected + HOLD.
5. Enter data for the next item in the program.
OR
Press MIC once to enter a new item number.
OR
Press MIC until you've exited that series's programming section.

Program 11 : System Numbering

11-13 : Service Code Setup (for ACD)

Level:

IN

Feature Availability

- Available.

Description

Use **Program 11-13 : Service Code Setup (for ACD)** to customize the Service Codes which are used with the Automatic Call Distribution (ACD) feature. You can customize additional Service Codes in Programs 11-10 through 11-12 and 11-14 through 11-16. The following chart shows:

- The number of each code (01-09)
- The function of the Service Code.
- What type of terminals can use the Service Code
- The code's default entry.

If you change a Service Code, be sure to record your entry in the "New" column.

Input Data

Item No.	Item	Terminals	Default	New
01	ACD Log In / Log Out (for KTS)	KTS, SLT	*5	
02	ACD Log Out (for SLT)	SLT	155	
03	Set ACD Wrap-Up Time (for SLT)	SLT	156	
04	Cancel ACD Wrap-Up Time (for SLT)	SLT	157	
05	Set ACD Off Duty (for SLT)	SLT	158	
06	Cancel ACD Off Duty (for SLT)	SLT	159	
07	ACD Conversation Recording (for SLT)	SLT	160	
08	ACD AIC Login Allows an AIC Agent to log into a group.	KTS	No setting	
09	ACD AIC Logout Allows an AIC Agent to log out of a group.	KTS	No setting	
10	ACD Agent Login by Supervisor Allows an ACD Supervisor to log into a group.	KTS	167	
11	ACD Agent Logout by Supervisor Allows an ACD Supervisor to log out of a group.	KTS	168	
12	Change Agent ACD Group by Supervisor When using service code 169 to change an agent's ACD group, the supervisor must enter a 2-digit number for the group. For example, to change to ACD group 4, the entry would be '169 04'.	KTS	169

Program 11 : System Numbering

11-15 : Service Code Setup, Administrative (for Special Access)

Level:

IN

Feature Availability

- Available.

Description

Use **Program 11-15 : Service Code Setup, Administrative (for Special Access)** to customize the special access Service Codes which are used by the administrator in the Hotel/Motel feature. You can customize additional Service Codes in Programs 11-10 through 11-14 and 11-16. The following chart shows:

- The number of each code.
- The function of the Service Code.
- What type of terminals can use the Service Code.
- The code's default entry.
- Programs that may be affected with the changing the code.

If you change a Service Code, be sure to record your entry in the "New" column.

Input Data

Item No.	Item	Terminals	Default	New	Related Program
01	Remote Maintenance Set the service code used in the dial-up number when using the serial or USB port for PCPro or WebPro		830		
02	ACD Access in Dial-In Conversion Table		860		22-04 22-11
03	Backup Data Save This option will save the user's soft key settings (extension's programmed Call Forwards, DND, etc.). It is recommended to use this feature before upgrading the UX5000 software.	KTS	##9		
04	Not Used				
05	UX5000 Programming Mode, Log-On	KTS	##*		11-01
06	Wake on LAN to APSU Unit	KTS	No Setting		10-22
07	- Not Used - Recording Destination in Dial-In Conversion Table		No Setting		
08	Network Message Lamp Control		866		
09	Transfer to Trunk Ring Group Code Allows a call to be transferred to a trunk ring group or External Paging zones.	KTS, SLT	No Setting		22-05-01 25-06-02 31-05-01
10	- Not Used -	-	-		
11	Ethernet Port Reset		No Setting		

Program 11 : System Numbering

11-15 : Service Code Setup, Administrative (for Special Access)

Item No.	Item	Terminals	Default	New	Related Program
12	Extension Data Swap Define the service code (up to 8 digits) to be used with the Extension Data Swap feature. <ul style="list-style-type: none"> When swapping IP extensions, the terminals will automatically reset after the swap. 	KTS, SLT	No Setting		92-04-01
13	Function Setting via DISA Define the service code an outside caller dials when on a DISA line in order to access certain UX5000 features. (8 Digits Max)	KTS, SLT	No Setting		
14	Modem Access When PCPro connects with an analog modem on the CCPU, the PC side application similarly sets the special show set here.		No Setting

Press MIC once to enter a new item number.
OR
Press MIC until you've exited that series's programming section.

Program 11 : System Numbering

11-16 : Single Digit Service Code Setup

Level:

IN

Feature Availability

- Available.

Description

Use **Program 11-16 : Single Digit Service Code Setup** to customize the one-digit Service Codes used when a busy or ring back signal is heard. You can customize additional Service Codes in Programs 11-10 through 11-15. The following chart shows:

- The number of each code (01-11)
- The function of the Service Code.
- What type of terminals can use the Service Code
- The code's default entry. For example, dialing 1 (code 03) when calling an extension will switch the call from either a voice or signal call (depending on how it's currently defined).
- Programs that may be affected by changing these codes.

If you change a Service Code, be sure to record your entry in the "New" column.

Entries can be digits 0-9, # and *. Be sure any changes do not conflict with other service codes. For example, setting an option in this program to * will affect the default entry for the Forced Trunk Disconnect service code, *3 (Program 11-10-26).

Input Data

Item No.	Item	Default	New	Related Program
01	Step Call	#		11-12-07
02	Barge In	No Setting		11-12-08
03	Switching of Voice/Signal Call	1		11-12-06

OR
Press MIC until you've exited that series's programming section.

Program 11 : System Numbering

11-17 : ACD Group Pilot Number

Level:

IN

Feature Availability

- Available.

Description

Use **Program 11-17 : ACD Group Pilot Number** to assign the ACD Master Number for each ACD Group. This is the number users dial to transfer calls to the ACD Group. Normally, you should use unassigned extension numbers (e.g., 600) for the master number. If you want to use an extension number which, by default, has a port number assigned (for example: in the 301-499, 5000-5312), first remove the default assignment. For example, to use extension number 325 as an ACD Master Number, first give extension port 025 a different extension assignment.

Input Data

ACD Group Number	01-64
------------------	-------

Item No.	ACD Group Pilot Number
01	Dial (Up to 8 digits)

Default

No ACD Group Pilot Numbers assigned to any ACD Group (1-64).

Conditions

None

Feature Cross Reference

- Automatic Call Distribution (ACD)
- Multiple Directory Numbers/Call Coverage Keys

Program 11 : System Numbering

11-17 : ACD Group Pilot Number

Program 12 : Night Mode Setup

12-02 : Automatic Night Service Patterns

Level:

SA

Feature Availability

- Available.

Description

Use **Program 12-02 : Automatic Night Service Patterns** to define the daily pattern of the auto night switch setting. Each Night Mode Group has 10 patterns. These patterns are used in Programs 12-03 and 12-04. The daily pattern consists of 20 timer settings.

Input Data

Night Mode Service Group Number	01-32
---------------------------------	-------

Time Pattern Number	01-10
---------------------	-------

Set Time Number	01-20
-----------------	-------

Item	Description	Input Data
01	Start Time	0000-2359
02	End Time	0000-2359
03	Operation Mode	1-8

Example:

Time Pattern 1

0:00	9:00	12:00	13:00	17:00	18:00	22:00	0:00
Mode 3 (midnight)	Mode 1 (day)	Mode 4 (rest)	Mode 1 (day)	Mode 4 (rest)	Mode 2 (night)	Mode 3 (midnight)	

To make the above schedule, it is necessary to set the data as follows:

Time setting 01:	00:00 to 09:00	Mode 3 (midnight)
Time setting 02:	09:00 to 12:00	Mode 1 (day)
Time setting 03:	12:00 to 13:00	Mode 4 (rest)
Time setting 04:	13:00 to 17:00	Mode 1 (day)
Time setting 05:	17:00 to 18:00	Mode 4 (rest)
Time setting 06:	18:00 to 22:00	Mode 2 (night)
Time setting 07:	22:00 to 00:00	Mode 3 (midnight)

Program 12 : Night Mode Setup

12-02 : Automatic Night Service Patterns

Time Pattern 2

0:00 | 0:00
 Mode 2
 (night)

Time setting 01: 00:00 to 00:00 Mode 2 (night)

Default

All groups, all patterns : 00:00 to 00:00 = Mode 1

Time Pattern 1

Set Time Number	Start Time	End Time	Mode
01	0000	0800	2
02	0800	1700	1
03	1700	0000	2
04	0000	0000	1
:	:	:	:
20	0000	0000	1

Time Pattern 2

Set Time Number	Start Time	End Time	Mode
01	0000	0000	2
02	0000	0000	1
:	:	:	:
20	0000	0000	1

Time Pattern 3

Set Time Number	Start Time	End Time	Mode
01	0000	0000	1
:	:	:	:
20	0000	0000	1

Conditions

None

Description

Use **Program 12-04 : Holiday Night Service Switching** to define a yearly schedule of holiday night-switch settings. This schedule is used for setting of special days which the company is expected to be closed, such as national holiday.

Input Data

Night Mode Service Group Number	01-32
---------------------------------	-------

Item No.	Days and Months	Time Pattern Number
01	0101 ~ 1231 (ex: 0101 = Jan. 1, 1231 = Dec. 31)	0-10 (0 = no setting)

Default

No setting

Conditions

None

Feature Cross Reference

- Night Service

Program 12 : Night Mode Setup

12-04 : Holiday Night Service Switching

Terminal Programming Instructions

To enter data for Program 12-04 (Holiday Night Service Switching):

1. Enter the programming mode.
2. 12 04

```
12-04-01 Mode Group1
Date01/01 =PTTN0
back ↑ ↓ select
```

3. Enter the number of the item you want to program.

```
12-04-nn Mode Group1
nnnnn
← - + →
```

4. Enter the Night Mode Service Group number to be defined or press FLASH to use the displayed entry.
5. Enter data for the item you selected + HOLD.
6. Enter data for the next item in the program.
OR
Press MIC once to enter a new item number.
OR
Press MIC until you've exited that series's programming section.

Program 12 : Night Mode Setup

12-05 : Night Mode Group Assignment for Extensions

Level:

IN

Feature Availability

- Available.

Description

Use **Program 12-05 : Night Mode Group Assignment for Extensions** to assign Day/Night Mode Group for each extension.

Input Data

Extension Number	Max. 8 Digits
------------------	---------------

Item No.	Night Mode Service Group Number	Default
01	01-32	1

Conditions

None

Feature Cross Reference

- Night Service

Terminal Programming Instructions

To enter data for Program 12-05 (Night Mode Group Assignment for Extensions):

1. Enter the programming mode.
2. 12 05

```
12-05-01 TEL301
Night Mode Group 1
back ↑ ↓ select
```

3. Enter the number of the item you want to program.

```
12-05-nn TEL301
nnnnn
← - + →
```

4. Enter the extension number to be defined or press FLASH to use the displayed entry.
5. Enter data for the item you selected + HOLD.
6. Enter data for the next item in the program.
OR
Press MIC once to enter a new item number.
OR
Press MIC until you've exited that series's programming section.

Program 12 : Night Mode Setup

12-06 : Night Mode Group Assignment for Trunks

Level:
IN

Feature Availability

- Available.

Description

Use **Program 12-06 : Night Mode Group Assignment for Trunks** to assign a Day/Night Mode Group for each trunk port.

Input Data

Trunk Port Number	1-200
-------------------	-------

Item No.	Night Mode Service Group Number	Default
01	01-32	1

Conditions

None

Feature Cross Reference

- Night Service

Terminal Programming Instructions

To enter data for Program 12-06 (Night Mode Group Assignment for Trunks):

1. Enter the programming mode.
2. 12 06

```
12-06-01 Trk Port 1
Night Mode Group 1
back ↑ ↓ select
```

3. Enter the number of the item you want to program.

```
12-06-nn Trk Port 1
nnnnn
← - + →
```

4. Enter the trunk port number to be defined or press FLASH to use the displayed entry.
5. Enter data for the item you selected + HOLD.
6. Enter data for the next item in the program.
OR
Press MIC once to enter a new item number.
OR
Press MIC until you've exited that series's programming section.

Program 12 : Night Mode Setup

12-07 : Text Data for Night Mode

Level:

IN

Feature Availability

- Available.

Description

Use **Program 12-07 : Text Data for Night Mode** to make an original text message which is displayed on an LCD of keyset terminal in each Night Mode.

Input Data

Night Mode Service Group Number	01-32
---------------------------------	-------

Day/Night Mode	1-8
----------------	-----

Item No.	Text Message
01	Maximum 12 characters (alphabetic or numeric)

Default

Mode 1 = No setting
Mode 2 = <Night>
Mode 3 = <Mid-night>
Mode 4 = <Rest>
Mode 5 = <Day2>
Mode 6 = <Night2>
Mode 7 = <Midnight2>
Mode 8 = <Rest2>

Conditions

None

Feature Cross Reference

- Night Service

Program 12 : Night Mode Setup

12-07 : Text Data for Night Mode

Terminal Programming Instructions

To enter data for Program 12-07 (Text Data for Night Mode):

1. Enter the programming mode.
2. 12 07

```
12-07-01 Mode Group1
Mode1 Text=
back ↑ ↓ select
```

3. Enter the number of the item you want to program.

```
12-07-nn Mode Group1

← - + →
```

4. Enter the Night Mode Service Group number to be defined or press FLASH to use the displayed entry.
5. Enter data for the item you selected + HOLD.
6. Enter data for the next item in the program.
OR
Press MIC once to enter a new item number.
OR
Press MIC until you've exited that series's programming section.

Program 12 : Night Mode Setup

12-08 : Night Mode Service Range

Level:

SA

Feature Availability

- Available.

Description

Use **Program 12-08 : Night Mode Service Range** to set the number of modes a user will toggle through when using the Night Mode Programmable Function Key to toggle night modes.

The UX5000 provides 8 day/nights modes.

Input Data

Night Mode Service Group Number	01-32
---------------------------------	-------

Item No.	Item	Input Data	Default	Related Program
01	Night Mode Service Range For each night mode group, determine how many night modes a user will toggle through when the Night Mode key is pressed.	2-8	2	15-07-01

Default

Users will toggle through 2 Night Modes.

Conditions

The Programmable Function key (PGM 15-07-01 or SC 851: 09) must have the additional data defined as "0" for the toggle function to work.

Feature Cross Reference

- Night Service

Program 14 : Trunk, Basic Setup

14-01 : Basic Trunk Data Setup

Level:

IN

Feature Availability

- Available.

Description

Use **Program 14-01 : Basic Trunk Data Setup** to set the basic options for each trunk port. Refer to the chart below for a description of each option, its range and default setting.

Input Data

Trunk Port Number	1-200
-------------------	-------

Item No.	Item	Input Data	Default	Related Program
01	Trunk Name Set the names for trunks. The trunk name displays at display keysets for incoming and outgoing calls.	Up to 12 characters	1 = Line 001 Line 200 = Line 200	
02	Transmit Codec Gain Type Use this option to select the codec gain for the trunk. The option sets the amount of gain (signal amplification) for the trunk you are programming.	1~63 (-15.5 ~ +15.5dB in .5dB intervals)	32 (0dB)	
03	Receive Codec Gain Type Use this option to select the codec gain for the trunk. The option sets the amount of gain (signal amplification) for the trunk you are programming.	1~63 (-15.5 ~ +15.5dB in .5dB intervals)	32 (0dB)	
04	Transmit Gain Level for Conference and Transfer Calls Use this option to select the codec gain type used by the trunk when it is part of an Unsupervised Conference.	1~63 (-15.5 ~ +15.5dB in .5dB intervals)	32 (0dB)	
05	Receive Gain Level for Conference and Transfer Calls Use this option to select the codec gain type used by the trunk when it is part of an Unsupervised Conference or Remote Conference.	1~63 (-15.5 ~ +15.5dB in .5dB intervals)	16 (-8dB)	
06	SMDR Print Out Use this option to have the UX5000 include/exclude the trunk you are programming from the SMDR printout. See Program 35-01 and 35-02 for SMDR printout options.	0 = No print out 1 = Prints out	0	

Program 14 : Trunk, Basic Setup

14-01 : Basic Trunk Data Setup

Item No.	Item	Input Data	Default	Related Program
07	Outgoing Calls Use this option to allow/prevent outgoing calls on the trunk you are programming.	0 = Prevented 1 = Allowed	1	
08	Toll Restriction Use this option to enable/disable Toll Restriction for the trunk. If enabled, the trunk follows Toll Restriction programming (ex: Programs 21-05, 21-06). If disabled, the trunk is a toll free line.	0 = Restriction disable 1 = Restriction enable	1	21-04 21-05 21-06
09	Private Line Use this option to enable/disable a trunk's ability to be used as a Private Line.	0 = Disable 1 = Enable	0	
10	DTMF Tones for Outgoing Calls Use this option to enable (1) or disable (0) DTMF tones for outgoing trunk calls.	0 = Disable 1 = Enable	0	
11	Account Code Required Use this option to enable (1) or disable (0) Forced Account Codes.	0 = Disable 1 = Enable	1	
12	- Not Used -		1	
13	Trunk-to-Trunk Transfer/Loop Disconnect Supervision Use this option to enable (1) or disable (0) trunk-to-trunk transfer with loop supervision for the trunk. This option is required for Call Forwarding Off-Premise and Tandem Trunking (including 2 B-Channel Transfer with PRI) only.	0 = Disable 1 = Enable	1	
14	Long Conversation Cutoff Use this option to enable or disable the Long Conversation Cutoff feature for each trunk.	0 = Disable 1 = Enable	0	20-21-03 20-21-04
15	Long Conversation Alarm Before Cut Off Use this option to enable or disable the Long Conversation Alarm for each trunk.	0 = Disable 1 = Enable	0	20-21-01 20-21-02
16	Forced Release of Held Call Use this option to enable/disable forced release for calls on Hold. If enabled, the UX5000 disconnects a call if it is on Hold longer than a programmed interval (Program 24-01-05). If disabled, forced disconnection does not occur. Program 24-01-01 also affects this option.	0 = Disable 1 = Enable	0	24-01-05

Program 14 : Trunk, Basic Setup

14-01 : Basic Trunk Data Setup

Item No.	Item	Input Data	Default	Related Program
17	<p>Trunk to Trunk Warning Tone for Long Conversation Alarm Use this option to enable or disable the Warning Tone for Long Conversation feature for DISA callers.</p>	0 = Disable 1 = Enable	0	
18	<p>Warning Tone For Incoming Calls This option can be used to enable the Warning Tone for Long Conversations for incoming calls only.</p>	0 = Disable 1 = Enable	0	20-18-09
19	<p>Privacy Mode Toggle Option Use this option to enable or disable a trunk's ability to be switched from private to non-private mode by pressing the line key or Privacy Release function key.</p>	0 = Disable 1 = Enable	0	
20	<p>Block Outgoing Caller ID Allow (1) or prevent (0) the UX5000 from automatically blocking outgoing Caller ID information when a user places a call. If allowed (i.e. block, enabled), the UX5000 automatically inserts the Caller ID block code *67 (defined in 14-01-21) before the user dialed digits.</p>	0 = Allow 1 = Block	0	
21	<p>Caller ID Block Code Enter the code, up to 8 digits, that should be used as the Caller ID Block Code. This code is automatically inserted before dialed digits if Program 14-01-20 is set to '1'.</p>	Dial (up to 8 digits)	*67	
22	<p>Caller ID to Voice Mail Enable or disable the UX5000's ability to send the Caller ID digits (Remote Log-On Protocol) to voice mail.</p>	0 = Disable 1 = Enable	0	
23	LCR - Not Used in U.S.		0	
24	<p>Trunk-to-Trunk Outgoing Caller ID Through Mode Enable or disable the Trunk-to-Trunk Outgoing Caller ID Through Mode. This option allows Caller ID from the original outside caller to be displayed when a trunk is forwarded off premise. This option can only be used with PRI and SIP trunks.</p>	0 = Disable 1 = Enable	0	

Program 14 : Trunk, Basic Setup

To enter data for Program 14-01 (Basic Trunk Data Setup):

1. Enter the programming mode.
2. 14 01

```
14-01-01   Trunk1
TRK Name = LINE 001
back  ↑    ↓  select
```

3. Enter the number of the item you want to program.

```
14-01-nn   Trunknnn
nnnn
←   -   +   →
```

4. Enter the trunk number to be defined or press FLASH to use the displayed entry.
5. Enter data for the item you selected + HOLD.
6. Enter data for the next item in the program.
OR
Press MIC once to enter a new item number.
OR
Press MIC until you've exited that series's programming section.

Program 14 : Trunk, Basic Setup

14-02 : Analog Trunk Data Setup

Level:

IN

Feature Availability

- Available.

Description

Use **Program 14-02 : Analog Trunk Data Setup** to set the basic options for each analog trunk port. Refer to the chart below for a description of each option, its range and default setting.

Input Data

Trunk Port Number	1-200
-------------------	-------

Item No.	Item	Input Data	Default	Related Program
01	Signaling Type (DP/DTMF) This option sets the signaling type for the trunk.	0 = Dial Pulse (10 PPS) 1 = Dial Pulse (20 PPS) 2 = DTMF	2	
02	Ring Detect Type This option sets Extended Ring Detect or Immediate Ring Detect for the trunk. For T1 loop/ground start trunks, this option must be set to '1' in order for the trunks to ring and lamp correctly.	0 = Normal/delayed 1 = Immediate ringing	0	
03	Flash Types This option to select the flash type (open loop flash or ground). Always set this option for open loop flash.	0 = Open Loop Flash 1 = Ground	0	
04	Flash For Timed Flash or Disconnect This option lets you use Flash for Timed Flash (Program 81-01-14) or Disconnect (Program 81-01-15). (A user implements Flash by pressing the FLASH key while on a trunk call.)	0 = Timed flash/Hooking 1 = Disconnect	0	81-01-14 81-01-15
05	Dial Tone Detection for Directly Accessed Trunks Use this option to enable/disable dial tone detection for directly accessed trunks. If disabled, the UX5000 outdials on the trunks without monitoring for dial tone. <i>If there are no DSP resources, this program will be ignored.</i>	0 = Dial Tone Detection not used 1 = Dial Tone Detection used	0	21-01-04
06	Pause at 1st Digit After Line Seize in Manual Dial Mode Use this option to enable/disable a pause before the UX5000 outdials a manually dialed call on the trunk. If enabled, the UX5000 will wait before outdialing the dialed digits. If disabled, the UX5000 outdials the digits as the user dials them. Set the pause interval timer in Program 21-01-06.	0 = No Pause 1 = Pause	1	21-01-06

Program 14 : Trunk, Basic Setup

14-02 : Analog Trunk Data Setup

Item No.	Item	Input Data	Default	Related Program
07	<p>DP to DTMF Conversion Options Determine how a user can convert a Dial Pulse (DP) call to a DTMF call. For each trunk, set the type of DP to DTMF conversion required. There are three conversion options: Automatic (0), Automatic and Manual (1), or Manual (2).</p> <p>Automatic: DP to DTMF conversion occurs automatically if the extension user waits more than 10 seconds before dialing the next digit.</p> <p>Automatic and Manual: DP to DTMF conversion occurs automatically if the extension user waits more than 10 seconds before dialing the next digit. In addition, the user can dial # to switch a DP trunk to DTMF dialing.</p> <p>Manual: User can dial # to switch a DP trunk to DTMF dialing.</p>	0 = Automatic 1 = Automatic and Manual 2 = Manual	2	21-01-03
08	<p>Answering Condition Determine the detection of the other party's response for an outside line.</p>	0 = Polarity reversing 1 = Polarity reversing or timer	1	21-01-03
09	<p>Busy Tone Detection If this option is enabled (1) for a trunk, if there is no DSP resource available, the Multiple Trunk Conference cannot be completed.</p>	0 = disable 1 = enable	0	
10	<p>Caller ID Enable or disable a trunk's ability to receive Caller ID information.</p>	0 = disable 1 = enable	0	
11	<p>Next Trunk in Rotary if No Dial Tone Use this option to enable/disable the UX5000's ability to skip over a trunk if dial tone is not detected. This option pertains to calls placed using Loop Keys, Speed Dial, ARS, Last Number Redial or Save Number dialed. It does not pertain to line key or Direct Trunk Access calls. <i>If there are no DSP resources, this program will be ignored.</i></p>	0 = disable 1 = enable	0	
12	<p>Detect Network Disconnect Signal - Not Used in U.S. -</p>	0 = disable 1 = enable	1	
13	<p>Trunk-to-Trunk Limitation - Not Used in U.S. -</p>	0 = disable 1 = enable	0	
14	<p>Loop Start/Ground Start</p>	0 = Loop Start 1 = Ground Start	0	

Program 14 : Trunk, Basic Setup

14-02 : Analog Trunk Data Setup

Item No.	Item	Input Data	Default	Related Program
16	Caller ID Type <i>- Not Used in U.S. -</i> Select the type of Caller ID signal from an analog trunk - FSK or DTMF.	0 = FSK 1 = DTMF	0	15-03-11
17	Synchronous Ringing Enable or disable the Synchronous Ringing feature.	0 = Disable 1 = Enable	0	
18	Busy Tone Detection on Talking Enable or disable if busy tone is detected when a DIL or DID/DISA is received.	0 = Disable 1 = Enable	0	
19	Busy Tone Detection Frequency Set the detection frequency of a busy tone when Program 14-02-18 is set to "1".	1-255	1	14-02-18
20	Busy Tone Detection Interval Set the detection interval of a busy tone when Program 14-02-18 is set to "1". The UX5000 detection for busy tone is continuous during this timer.	0-64800(x100ms)	0	14-02-18

Press MIC until you've exited that series's programming section.

Program 14 : Trunk, Basic Setup

14-06 : Trunk Group Routing

Level:

IN

Feature Availability

- Available - 100 Trunk Group Numbers.

Description

Use **Program 14-06 : Trunk Group Routing** to set up an outbound routing table for the trunk groups you assigned in Program 14-05. When users dial 9, the UX5000 routes their calls in the order (priority) you specify. For example, if a user dials 9 and all calls in the first group are busy, the UX5000 may route the call to another group. Trunk Access Map programming (Programs 14-07) may limit this option. The UX5000 contains 100 routing tables for trunk access. Each table has four priority orders for trunk access.

Example for setting:

With less than 4 trunk groups,

Route number 1 : Order 1 – Trunk group 1

: Order 2 – Trunk group 2

For the above setting, if all the lines in trunk group 1 are busy, the UX5000 searches for an idle line in trunk group 2.

With more than 4 trunk groups,

Route number 1 : Order 1 – Trunk group 1

: Order 2 – Trunk group 2

: Order 3 – Trunk group 3

: Order 4 – 1002 (Jump to Route number 2)

Route number 2 : Order 1 – Trunk group 4

: Order 2 – Trunk group 5

For the above setting, if all the lines in the trunk group 1, 2 and 3 are busy, the UX5000 searches for an idle line in trunk group 4 and 5.

Input Data

Route Table Number	001-100
--------------------	---------

Item No.	Priority Order Number	Input Data	Related Program
01	1-4	0 = not specify 001-100 : (Trunk Group Number) 101-150 : (100 + Network System Number) 1001-1100 : (1000 + Route Table Number)	14-01-07 14-05 15-01-02 21-02

Program 14 : Trunk, Basic Setup

14-06 : Trunk Group Routing

Default

Route 1, Order Number 1 = 1 (Trunk Group 1), Order Numbers 2, 3, 4 = 0 (not specified)
All Other Routes (2-100) and Order Numbers (1-4) = 0 (not specified)

Conditions

None

Feature Cross Reference

Press MIC once to enter a new item number.
OR
Press MIC until you've exited that series's programming section.

Program 14 : Trunk, Basic Setup

14-07 : Trunk Access Map Setup

Level:

IN

Feature Availability

- Available.

Description

Use **Program 14-07 : Trunk Access Map Setup** to set up the Trunk Access Maps. This sets an extension's access options for trunks. For example, an extension can only place outgoing calls on trunks to which it has outgoing access. There are 200 Access Maps with all 200 trunk ports programmed in Map 1 with full access.

An extension can use one of the maps you set up in this program. Use Program 15-06 to assign Trunk Access Maps to extensions. Each trunk can have one of eight access options for each Access Map.

Input Data

Access Map Number	001-200
-------------------	---------

Item No.	Trunk Port Number	Input Data
01	1-200	0 = No access 1 = Outgoing access only 2 = Incoming access only 3 = Access only when trunk on Hold 4 = Outgoing access and access when trunk on Hold 5 = Incoming access and access when trunk on Hold 6 = Incoming and Outgoing access 7 = Incoming access, outgoing access and access when trunk on Hold

Default

- Access Map 1 = Trunk Ports 1-200 assigned with option '7' access (incoming and outgoing access and access when trunk is on Hold).
- Access Maps 2-200 - Trunk Ports 1-200 assigned with option '0' access (no access).

Conditions

None

Program 15 : Extension, Basic Setup

15-01 : Basic Extension Data Setup

Terminal Programming Instructions

To enter data for Program 15-01 (Basic Extension Data Setup):

1. Enter the programming mode.
2. 15 01

```
15-01-01 TEL301
Ext.Name = STA 301
back ↑ ↓ select
```

3. Enter the number of the item you want to program.

```
15-01-nn TELnnn
nnnnn
← - + →
```

4. Enter the terminal number to be defined or press FLASH to use the displayed entry.
5. Enter data for the item you selected + HOLD.
6. Enter data for the next item in the program.
OR
Press MIC once to enter a new item number.
OR
Press MIC until you've exited that series's programming section.

11	<p>Callback Automatic Answer</p> <p>Use this option to enable or disable automatic answer for Callbacks. If enabled, extension automatically answers Callback ring when user lifts the handset. If disabled, use must press line appearance key to answer Callback.</p>	0 = off 1 = on	1	

Program 15 : Extension, Basic Setup

15-02 : Multi-Line Terminal Basic Setup

Item No.	Item	Input Data	Default	Related Program
12	Off Hook Ringing Use this option to set the keyset's off hook signaling. Off hook signaling occurs when a keyset user receives a second call while busy on a handset call. DID, DNIS and DIL trunks can use any of the 4 options - normal/ring group trunks can only use options "0" or "1". To enable/disable Off Hook Signaling for an extension's Class of Service, use Program 20-13-06.	0 = Muted Off Hook Ringing 1 = No Off Hook Ringing 2 = Not Used 3 = One Beep in Speaker 4 = One Beep in Handset	0	
13	Redial List Mode Select whether the Redial List feature should store internal and external numbers (0), or only external numbers (1).	0 = Extension/Trunk Mode 1 = Trunk Mode	1	
14	-- Not Used --		0	
15	Storage of Caller ID for Answered Call Select whether an answered call should be included in the Call History Log.	0 = Disable 1 = Enable	1	
16	Handsfree Operation Enable or disable an extensions ability to use the speakerphone on outside calls. Users can hear the conversation, but cannot respond handsfree.	0 = Disable 1 = Enable	1	
17	-- Not Used --			
18	Power Saving Mode Enable or disable the power saving mode for the keyset or IP terminal.	0 = Normal mode 1 = Power-saving mode	1	20-02-10
19	CTA/CTU Data Communication Mode Select '0' if the dip switch settings on the CTA/CTU Adapter are set to PC connection (1=on, 2-8=off) or select '1' if the dip switches are set to printer connection (1-2=on, 3-8=off).	0 = CTI mode 1 = non-procedural/SMDR mode	0	15-02-20
20	Baud Rate for CTA Port Select the baud rate to be used by the CTA Adapter.	0 = 4800 1 = 9600 2 = 19200	2	15-02-19

Program 15 : Extension, Basic Setup

15-02 : Multi-Line Terminal Basic Setup

Item No.	Item	Input Data	Default	Related Program
21	<p>Virtual Extension Access Mode (when idle Virtual Extension key pressed) Determine whether an extension's Virtual Extension/Call Coverage Key should be as a DSS key to the extension and for receiving calls (0), for placing and receiving calls (1), or just receiving incoming calls (2). If setting Trunk Toll Restriction Level for a virtual extension, this option must be set to '1' to allow the extension the ability to place outgoing ICM or CO calls.</p>	0 = DSS (Inbound/Outbound) 1 = Outgoing 2 = Ignore Key (Inbound)	2	15-02-30 21-21-01
22	<p>Multiple Incoming From Intercom and Trunk If enabled, this affects how a Hotline key lamps, based on the setting in Program 22-01-01. If set to 1 for trunk priority, the Hotline key will lamp solid when a trunk call rings in. If set to 0 for intercom priority, the Hotline key will not lamp for incoming trunk calls, but will lamp solid for intercom calls. If this option is disabled, Hotline keys will lamp solid for any incoming calls regardless of the setting in Program 22-01-01.</p>	0 = Disable 1 = Enable	1	22-01-01
23	<p>Abbreviated Dialing Preview Mode When an abbreviated number is dialed, determine whether it should be previewed or dialed immediately.</p>	0 = Preview 1 = Immediately Sent	0	
24	<p>Conference Key Mode This option allows an extension's CONF key to be programmed for Conference or for Transfer. When set for Transfer (1), the user places a call on hold, dials the extension to which it should be transferred, the presses the CONF key. The call is then transferred. When set for Conference (0), with an active call, the user presses the CONF key, places a second call, then presses the CONF key twice. All the calls are then connected. In order for Cordless II and Cordless Lite II users to use a Flash key, this option must be set to "1" for those extensions.</p>	0 = Conference 1 = Transfer	0	15-02-05

Program 15 : Extension, Basic Setup

15-02 : Multi-Line Terminal Basic Setup

Item No.	Item	Input Data	Default	Related Program
25	-- Not Used --	-	-	
26	<p>MSG Key Operation Mode Determine whether an extension's MSG key should function as a Message key or Voice Mail key. If set as a Message key, the user will be able to press the key to call the voice mail only when they have new messages.</p>	<p>0 = Message Key 1 = Voice Mail Key</p>	0	
27	<p>Volume Level Retention This option determines whether a keyset's handset volume will change back to the UX5000 default (0) or whether it will be retained at the user's setting (1) after hanging up the handset. With software 5.91+, this option will also affect the volume retention for the speakerphone as well.</p>	<p>0 = Revert to Default Volume 1 = Retain User's Setting</p>	1	
28	<p>Message Waiting LED Color This option allows you to select whether the Message Wait LED located at the top of the keyset will flash green (0) or red (1) when a Message Wait indication is flashing. By default, this option is set to "1" (red).</p> <p>Note that if this LED is also used for voice mail indications (no Programmable Function Key programmed for voice mail), if there are both voice mail messages and Message Wait indications, the color set for Message Wait will override the color used for voice mail indications (red).</p>	<p>0 = Flashes Green 1 = Flashes Red</p>	1	
29	<p>ISDN Back Tone This program option can be used to adjust the PB Back Tone level when calling an ISDN line.</p>	<p>1-63 (-15.5 to +15.5 db in 0.5 dB steps)</p>	32	
30	<p>Toll Restriction Class -Virtual Extension or Real Extension Use this program to define which Toll Restriction class which should be followed when placing a call on a virtual/Multiple Directory Number/Call Coverage key - the keyset's or the virtual extension's.</p>	<p>0 = Virtual Extension Restriction Class 1 = Actual/Physical Extension Restriction Class</p>	1	15-02-21 21-21-01

06	<p>Extension Reverse <i>Not Used in U.S. - Do Not Change Default Entry</i> as DTMF issues may arise with voice mail.</p>	0 = Disable 1 = Enable	0	

Program 15 : Extension, Basic Setup

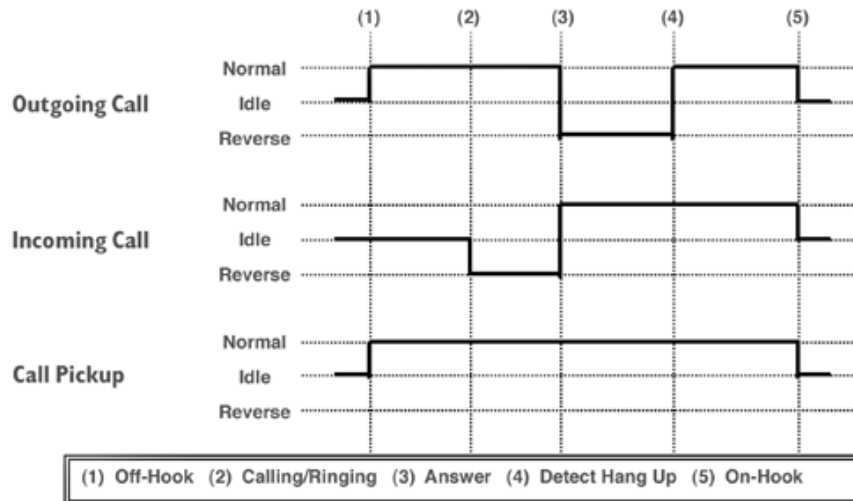

15-03 : Single Line Terminal Basic Data Setup

07	On Hook When Holding (SLT) After placing a call on hold, determine if the SLT should be able to place the handset back on hook.	0 = Disable 1 = Enable	1	
08	Answer on hook when holding (SLT)	0 = Disable 1 = Enable	1	11-12-46
09	Caller ID Function - For External Module Enable (1) or disable (0) the Caller ID FSK signal for an external Caller ID module or a 3rd party vendor phone with Caller ID display. With the Caller ID Sender Queuing feature, set this option to "1" for the extension. <i>Important:</i> If voice mail is used, this setting must be disabled or the UX5000 integration codes for disconnect will be incorrect. Note: With some earlier software, if a 2500 set (no Caller ID) is installed, this must be set to "0" or else incoming callers will not have a talkpath.	0 = Disable 1 = Enable	0	
10	Caller ID Name Determine if an extension user's terminal should display the Caller ID name.	0 = Disable 1 = Enable	1	14-02-10 20-09-02
11	Caller ID Type <i>- Not Used in U.S. -</i> This option allows you to select either FSK or DTMF as the Caller ID type to be received by a single line terminal.	0 = FSK 1 = DTMF	0	14-02-16
12	- Not Available -			
13	MW Signal Type For analog single line terminals which provide a display, when a user leaves a Message Waiting for a SLT which has a display, this option is used to determine whether the SLT user will see a MW LED indication or if the Caller ID will be used to display the call.	0 = Lamp Indication (-112 VDC +-3 VDC) 1 = Caller ID Indication (FSK)	0	
14	Forwarded Caller ID Display Mode When transferring a CO call to an analog SLT, set this option to "1" if Caller ID from the CO should be displayed on the transferred terminal's display. Selecting "0" will display the transferring extension information.	0 = Calling 1 = Forward	0	
15	Disconnect Without Dial After Hooking Hold <i>Not Used in U.S. - Do Not Change Default Entry</i>	-	0	
16	Special DTMF Protocol Send For each analog port, enable (1) or disable (0) the ability to send the extension number of the terminal that forwarded to it when not assigned a voice mail port. This setting is ignored if a voice mail department group number is defined in Program 45-01-01.	0=No 1=Yes	0	45-01-16

Program 15 : Extension, Basic Setup

15-03 : Single Line Terminal Basic Data Setup

17	Dial Tone Select When an SLT user has received a Message Waiting or Voice Mail message, this option allows the UX5000 to provide an initial stutter dial tone (three beeps then normal dial tone) when the SLT handset is lifted.	0 = Normal Dial Tone 1 = New Dial Tone	0

Terminal Programming Instructions

To enter data for Program 15-05 (IP Terminal Basic Data Setup):

1. Enter the programming mode.
2. 15 05

```
15-05-01 TEL301
IP-Phone Type 0:NGT
back ↑ ↓ select
```

3. Enter the number of the item you want to program.

```
15-05-nn TELnnn
nnnnn
← - + →
```

4. Enter the terminal number to be defined or press FLASH to use the displayed entry.
5. Enter data for the item you selected + HOLD.
6. Enter data for the next item in the program.
OR
Press MIC once to enter a new item number.
OR
Press MIC until you've exited that series's programming section.

Program 15 : Extension, Basic Setup

15-06 : Trunk Access Map for Extensions

Level:

IN

Feature Availability

- Available.

Description

Use **Program 15-06 : Trunk Access Map for Extensions** to define the trunk access map for each extension. An extension can only place outgoing calls on trunks to which it has outgoing access. Use Program 14-07 to define the available access maps.

Input Data

Extension Number	Max. 8 digits
------------------	---------------

Day/Night Mode	1-8
----------------	-----

Item No.	Trunk Access Map No.	Default	Related Program
01	1-200	1	14-07

Conditions

Terminal Programming Instructions

To enter data for Program 15-06 (Trunk Access Map for Extensions):

1. Enter the programming mode.
2. 15 06

```
15-06-01 TEL301
Mode1    Acc-Map 1
back ↑   ↓ select
```

3. Enter the number of the item you want to program.

```
15-06-nn TELnnn
nnnnn
← - + →
```

4. Enter the terminal number to be defined or press FLASH to use the displayed entry.
5. Enter data for the item you selected + HOLD.
6. Enter data for the next item in the program.
OR
Press MIC once to enter a new item number.
OR
Press MIC until you've exited that series's programming section.

Program 15 : Extension, Basic Setup

15-07 : Programmable Function Keys

Level:

SA

Feature Availability

- Available.

Description

Use **Program 15-07 : Programmable Function Keys** to set the functions of an extension's Programmable Function Key.

For certain functions, you can append data to the key's basic function. For example, the function 26 appended by data 1 makes a Group Call Pickup key for Pickup Group 1. You can also program Function Keys using Service Codes.

In order to clear any previously programmed key, press the CLEAR key to erase any displayed code.

Input Data

Extension Number	Max. 8 digits
------------------	---------------

Item No.	Line Key Number	Function Number	Additional Data
01	1-48	0-99 (General Function Level) (Service Code 851 by default) * 00-* 99 (Appearance Function Level) (Service Code 852 by default)	Refer to the function number list.

Default

Programmable keys 1-8 are line keys (key 1 = line 1, key 2 = line 2, etc.). All other programmable keys are undefined.

*18	ACD Overflow Control	ACD Group Number	Red On: Enable Slow Blink (Red): Disable	-
*19	ACD Queue Status Display Check			-
*30	CALL1 Key			
*31	CALL2 Key			

Conditions

When a key is programmed using service code 852, that key cannot be programmed with a function using the 851 code until the key is undefined (000). For example with a Park Key programmed by dialing 852 + *04 must be undefined by dialing 852 + 000 before it can be programmed as a Voice Over key by dialing 851 + 48.

Feature Cross Reference

Refer to chart above.

Terminal Programming Instructions

To enter data for Program 15-07 (Programmable Function Keys):

1. Enter the programming mode.
2. 15 07

```
15-07-01 TEL301
KY01 = *01
back ↑ ↓ select
```

3. Enter the number of the item you want to program.

```
15-07-nn TELnnn
nnnnn
← - + →
```

4. Enter the terminal number to be defined or press FLASH to use the displayed entry.
5. Enter data for the item you selected + HOLD.
6. Enter data for the next item in the program.
OR
Press MIC once to enter a new item number.
OR
Press MIC until you've exited that series's programming section.

Program 15 : Extension, Basic Setup

15-08 : Incoming Virtual Extension Ring Tone Setup

Level:
IN

Feature Availability

- Available - 256 virtual extension ports.

Description

Use **Program 15-08 : Incoming Virtual Extension Ring Tone Setup** to assign a ring tone range (0-4) to incoming virtual extensions assigned to a Virtual Extension key (Program 15-07). If you enable ringing for the key in Program 15-09, the key rings with the tone you set in this program. Also see Program 22-03. The chart below shows the available tones.

Input Data

Extension Number	Max. 8 digits
------------------	---------------

Item No.	Incoming Ring Pattern	Default	Description
01	0 = Tone pattern 1 1 = Tone pattern 2 2 = Tone pattern 3 3 = Tone pattern 4 4 = Incoming extension ring tone	0: Tone pattern 1	<p>When an extension or a virtual extension is assigned to the function key on the key terminal, select the ring tone when receiving a call on that key. (Note that program 13-04-05 takes priority over this setting.)</p> <p>For ACD Call Coverage Keys, only tone pattern 1 (entry 0) can be used. The remaining patterns are not checked with this feature.</p>

Incoming Signal Frequency Pattern	Type	Frequency 1	Frequency 2	Modulation
Pattern 1	High Middle Low	1100 660 520	1400 760 660	16Hz 16Hz 16Hz
Pattern 2	High Middle Low	1100 660 520	1400 760 660	8Hz 8Hz 8Hz
Pattern 3	High Middle Low	1100 660 520	1100 660 520	Envelope Envelope Envelope
Pattern 4	High Middle Low	1100 660 520	1100 660 520	No modulation No modulation No modulation
Internal Incoming Signal Frequency	High Middle Low	1100 660 520	1400 760 660	8Hz 8Hz 8Hz

OR
Press MIC once to enter a new item number.
OR
Press MIC until you've exited that series's programming section.

Program 15 : Extension, Basic Setup

15-09 : Virtual Extension Ring Assignment

Level:

SA

Feature Availability

- Available - 256 virtual extension ports.

Description

Use **Program 15-09 : Virtual Extension Ring Assignment** to assign the ringing options for an extension's Virtual Extension Key or Virtual Department Group Answer Key which is defined in Program 15-07. You make an assignment for each Night Service Mode.

Assign extension numbers and names to virtual extension ports in Program 15-01. Program Virtual Extension keys in Program 15-07 (code *03).

Input Data

Extension Number	Up to 8 digits
------------------	----------------

Key Number	01-48
------------	-------

Item No.	Day/Night Mode	Ringing	Default
01	1-8	0 = No ringing 1 = Ring	0

Conditions

Program the Multiple Directory Number function keys NOT to ring before removing the key from a keyset's programming.

Feature Cross Reference

- Multiple Directory Number / Call Coverage

Program 15 : Extension, Basic Setup

15-09 : Virtual Extension Ring Assignment

Terminal Programming Instructions

To enter data for Program 15-09 (Virtual Extension Ring Assignment):

1. Enter the programming mode.
2. 15 09

```
15-09-01 TEL301
KY01 Mode1 =0:No

←      -    +    →
```

4. Enter the terminal number to be defined or press FLASH to use the displayed entry.
5. Enter data for the item you selected + HOLD.
6. Enter data for the next item in the program.
OR
Press MIC once to enter a new item number.
OR
Press MIC until you've exited that series's programming section.

Program 15 : Extension, Basic Setup

15-10 : Incoming Virtual Extension Ring Tone Order Setup

Level:
SA

Feature Availability

- Available - 256 virtual extension ports.

Description

Use **Program 15-10 : Incoming Virtual Extension Ring Tone Order Setup** to set the priority (1-4) for the Virtual Extension Ring Tones set in Program 15-08. When Virtual Extension calls ring an extension simultaneously, the tone with the highest order number (e.g., 1) rings. The other keys just flash.

Input Data

Extension Number	Up to 8 digits
------------------	----------------

Item No.	Order	Data	Description	Related Program
01	1-4	0 = Tone pattern 1 1 = Tone pattern 2 2 = Tone pattern 3 3 = Tone pattern 4 4 = Incoming extension ring tone	In the case where two or more virtual extensions are defined on a function key on a key-set, use this option to set the priority and tone of each key.	15-08

Default

By default, Virtual Extension ring tones have the following order.

Order	Ring Tone (Set in Program 15-08)
1	0
2	1
3	2
4	3

Conditions

None

Feature Cross Reference

- Multiple Directory Number / Call Coverage

Program 15 : Extension, Basic Setup

15-11 : Virtual Extension Delayed Ring Assignment

Level:

SA

Feature Availability

- Available - 256 virtual extension ports.

Description

Use **Program 15-11 : Virtual Extension Delayed Ring Assignment** to assign the delayed ringing options for an extension's Virtual Extension or Virtual Department Group Answer keys (defined in Program 15-09). You make an assignment for each Night Service Mode.

Assign extension numbers (Program 11-04) and names (Program 15-01) to virtual extension ports. Program Multiple Directory Number (virtual extension) keys in Program 15-07 (code *03).

Input Data

Extension Number	Max. 8 digits
------------------	---------------

Key Number	01-48
------------	-------

Item No.	Day/Night Mode	Ringing	Default	Related Program
01	1-8	0 = Immediate Ring 1 = Delayed Ring	0	20-04-03

Conditions

Program the Multiple Directory Number keys NOT to ring before removing the key from a keyset's programming.

Feature Cross Reference

- Multiple Directory Number / Call Coverage

Program 15 : Extension, Basic Setup

15-12 : Conversation Recording Destination for Extensions

Level:

IN

Feature Availability

- Available.

Description

Use **Program 15-12 : Conversation Recording Destination for Extensions** to set the ACI Conversation Recording destination for each extension.

Note: If both Programs 14-09 and 15-12 define a destination, the destination in Program 15-12 will be followed.

Input Data

Extension Number	Max. 8 digits
------------------	---------------

Item Number	Item	Input Data	Default
01	ACI Recording Destination Extension Number Enter the ACI's extension number to which the trunk calls should be recorded.	Max. 8 digits	No setting
02	ACI Automatic Recording for Incoming Calls Determine if an extension's incoming calls should be automatically recorded to the ACI.	0 = Disable 1 = Enable	0
03	Recording Contents Storing Method (DSPDB) - Not Used in U.S. -	0 = Specified 1 = Own box	0
04	ACI Automatic Recording for Outgoing Call Determine if an extension's outgoing calls should be automatically recorded to the ACI.	0 = Disable 1 = Enable	0

Conditions

None

Feature Cross Reference

- Analog Communications Interface (ACI)

Program 15 : Extension, Basic Setup

15-12 : Conversation Recording Destination for Extensions

Terminal Programming Instructions

To enter data for Program 15-12 (Conversation Recording Destination for Extensions):

1. Enter the programming mode.
2. 15 12

```
15-12-01 TEL301
Rec.Destin.Ext
back ↑ ↓ select
```

3. Enter the number of the item you want to program.

```
15-12-nn TELnnn
nnnnn
← - + →
```

4. Enter the terminal number to be defined or press FLASH to use the displayed entry.
5. Enter data for the item you selected + HOLD.
6. Enter data for the next item in the program.
OR
Press MIC once to enter a new item number.
OR
Press MIC until you've exited that series's programming section.

Program 15 : Extension, Basic Setup

15-13 : Loop Keys

Level:

IN

Feature Availability

- Available.

Description

Use **Program 15-13 : Loop Keys** to assign the Loop Key data for each keyset terminal. Loop Keys can be incoming, outgoing or both ways. Outgoing Loop Keys use the entry in item 1. Incoming Loop Keys use the entry in item 2. Both Way Loop Keys follow the entries in both item 1 and 2.

Input Data

Extension Number	Max. 8 digits
------------------	---------------

Key Number	01-48
------------	-------

Item Number	Item	Input Data
01	Outgoing Option	0-8 or 0-100 (0 = Assigns the Loop Key for ARS, 1-100 = Assigns the Loop Key to the trunk group specified)
02	Incoming Option	0-8 or 0-100 (0 = Assigns the Loop Key to all trunk groups, 1-100 = Assigns the Loop key to the trunk group specified)

Default

Programmable Function Key No. - 01-32
 Outgoing Option - 0 (Assigns the Loop Key for ARS)
 Incoming Options - 0 (Assigns the Loop Key to all trunk groups)

Conditions

None

Program 16 : Department Group Setup

16-01 : Department Group Basic Data Setup

Level:

IN

Feature Availability

- Available - 64 Department Groups.

Description

Use **Program 16-01 : Department Group Basic Data Setup** to set the function mode for each department group.

Input Data

Department Group Number	01-64
-------------------------	-------

Item No.	Item	Input Data	Default	Related Program
01	Department Name Enter the Department Group name to be displayed when the group number is called.	Max. 12 characters	No setting	11-07
02	Department Calling Cycle Use this option to set the call routing for Department Calling. Routing can be either circular (cycles to all terminals in group) or priority (cycles to highest priority extensions first).	0 = Priority Routing 1 = Circular Routing	0	16-02
03	Department Routing When Busy Use this option to set how the UX5000 routes an Intercom call to a busy Department Group member. Intercom callers to the extension can either hear busy or route to the first available department number. This only occurs for calls to the extension directly, not the department number assigned in Program 11-07	0 = Normal (Intercom caller to busy department member hears busy) 1 = Circular (Intercom callers to busy department member routes to idle member)	0	16-02
04	Hunting Mode Use this option to set the action taken when a call reaches the last extension in the Department Group (0=hunting stopped, 1 =hunting repeats with circular routing through the Department Group).	0 = Last extension is called and hunting is stopped. 1 = Circular	0	

Program 16 : Department Group Setup

16-01 : Department Group Basic Data Setup

Item No.	Item	Input Data	Default	Related Program
05	<p>Department Group All Ring Mode Operation Determine whether calls ringing a Department Group should ring all extensions in the group simultaneously automatically or manually when using the service code defined in Program 11-12-09.</p> <p>This option does not apply to secondary department groups (16-01-03).</p>	<p>0 = Manual 1 = Automatic</p>	0	11-16-10
06	<p>STG Withdraw Mode - Not Used -</p>	<p>0 = Disable (Camp On) 1 = Enable (Overflow Mode)</p>	0	
07	<p>Call Recall Restriction for STG Determine whether a or not an unanswered call transferred to a Department Group should recall the extension from which it was transferred.</p>	<p>0 = Disable (Recall) 1 = Enable (No Recall)</p>	0	
08	<p>Queuing for Department Group Call To have Department Group calls queue when busy, set this entry to "1" for an extension or voice mail group.</p>	<p>0 = No Queuing 1 = Queuing</p> <p>(This program allows entries of 1-32, however, the UX5000 accepts any entry other than "0" as to allow queuing.)</p>	0	
09	<p>Department Hunting No Answer Time Set how long a call will ring a Department group extension before hunting occurs.</p>	0-64800 seconds	15	
10	<p>Hunt Type Set the type of hunting for each Extension (Department) Group:</p>	<p>0 = No queuing 1 = Hunting When Busy 2 = Hunting When Not Answered 3 = Hunting When Busy or No Answer</p>	0	

Conditions

None

Press MIC until you've exited that series's programming section.

Program 16 : Department Group Setup

16-02 : Department Group Assignment for Extensions

Level:

IN

Feature Availability

- Available - 64 Department Groups.

Description

Use **Program 16-02 : Department Group Assignment for Extensions** to assign each extension to a Department Group and to assign the extension's priority in the group. When a call comes into the group, it may ring the extensions in order of their priority. The UX5000 uses these groups for Department Calling. Assign pilot numbers to Department Groups in Program 11-07. This lets UX5000 users place calls to the departments.

For voice mail, assign the voice mail ports to the same group. With IntraMail, these ports are defined in Program 47-01-17.

Input Data

Extension Number	Max. 8 digits
------------------	---------------

Item No.	Group Number	Priority	Default	Description	Related Program
01	1-64	1-999	1 – xxx (See Note Below)	Set up the Department Group called by the pilot number and the extension priority when a group is called. Call Pickup Groups are set up in 23-02.	11-07 16-01

Note: The initial value of a priority becomes the ports numerical order assigned in Program 11-02 and 11-04. (Extension ports are 1-512 (depending on port licensing). Virtual extension ports are 1-256.)

Conditions

None

Feature Cross Reference

Program 16 : Department Group Setup

16-03 : Secondary Department Group

Level:

IN

Feature Availability

- Available - 64 Department Groups.

Description

Use **Program 16-03 : Secondary Department Group** to set a second Department Group for extensions. Each secondary Department Group can have up to 16 extensions assigned.

Input Data

Secondary Department (Extension) Group Number	01-64
---	-------

Item No.	Extension Entry	Extension Number	Priority Order	Description
01	01-16 (16 extensions numbers can be assigned per Secondary Department Group)	Max. 8 digits	0-999	This program is set up when placing extensions into two or more groups.

Default

All Department Groups : No setting

Conditions

Department Group All Ring (Program 16-01-05) will not include any extensions assigned in this program. It will only include those extensions which have the Department Group as their primary group (assigned in Program 16-02-01).

Feature Cross Reference

- Department Calling

Program 16 : Department Group Setup

Program 16 : Department Group Setup

16-04 : Call Restriction Between Department Groups

Level:

IN

Feature Availability

- Available - 64 Department Groups.

Description

Use **Program 16-04 : Call Restriction Between Department Groups** to prevent calling between certain Department Groups. This restricts calls to the extension numbers as well as the Department Group number.

An extension user in one Department Group, however, can use an extension in a restricted Department Group as the destination extension when using the Call Forwarding feature.

This restriction option does not apply to secondary Department Groups (defined in Program 16-03-01).

Input Data

Department (Extension) Group Number	01-64
Call Restricted Group	1-8

Item No.	Restricted Department Group	Description
01	01-64	For each Department Group (01-64), enter the Department Group numbers which should be restricted. Up to 8 different groups can be defined for each Department Group. This restriction will apply to any extension within the Department Group (including the operator).

Default

All Department Groups : No setting

Conditions

This restriction option does not apply to secondary Department Groups (defined in Program 16-03-01).

Feature Cross Reference

- Department Calling

Program 16 : Department Group Setup

16-04 : Call Restriction Between Department Groups

- For Your Notes -

Program 20 : System Option Setup

20-01 : System Options

Level:

IN

Feature Availability

- Available.

Description

Use **Program 20-01 : System Options** to set various UX5000 options.

Input Data

Item No.	Item	Input Data	Default	Related Program
01	Operator Access Mode When more than one operator is used, set the type of ringing priority used when an extension calls the operator terminal.	0 = Step 1 = Circular	0	20-17
02	Selectable Text Message Mode Use this program to select the mode when calling the terminal which has enabled a Selectable Text Message. Note: Any extensions previously set with Selectable Display Messaging must cancel the feature and reactivate in order for a change in this option to take affect.	0 = Call mode 1 = No Answer/ Busy mode	1	11-11-14 15-07-08
03	DSP Sender Resource Selection With the Caller ID Sender Queuing feature, set the DSP Sender Resource Selection to "1" (Caller ID Sender).	0 = Conference 1 = Caller ID 2 = MFC	0	
04	Network BLF Indication Used to determine how often the UX5000 updates the DSS key BLF indications. For CygniLink, the entry should be "30" in all UX5000s.	0-64800 in 100 ms increments	0	30-05
05	DTMF Receive Active Time For OPXs, analog terminals and certain analog trunks (like DISA), the UX5000 attaches a DTMF receiver to the port for this interval. The UX5000 releases the receiver after the interval expires.	0-64800 seconds	10	25-07-01
06	Alarm Duration This interval sets the duration of the alarm signal.	0-64800 seconds	30	
07	Callback Ring Duration Time Callback rings an extension for this interval.	0-64800 seconds	15	11-12-05 15-07-35
08	Trunk Queuing Callback Time Trunk Queuing callback rings an extension for this interval.	0-64800 seconds	15	11-12-05 15-07-35 20-31-01
09	Callback/Trunk Queuing Cancel Time The UX5000 cancels an extension's Callback or Trunk Queuing request after this interval.	0-64800 seconds	64800	11-12-05 15-07-35 20-31-02
10	Trunk Guard Timer When a trunk is released, the line can be seized again after this timer expires.	0-64800 seconds	1	
11	- Not Used -

Program 20 : System Option Setup

20-02 : System Options for Multi-Line Terminals

Level:

IN

Feature Availability

- Available.

Description

Use **Program 20-02 : System Options for Multi-Line Terminals** to set various UX5000 options for Multi-Line Terminals.

Input Data

Item No.	Item	Input Data	Default
01	Trunk Loop Key Operation Mode	<p>0 = Indicate Using Loop Trunk 1 = Not indicated</p> <p><i>Mode</i> <i>0 = Keep Lamp</i> <i>1 = LED Off</i></p> <p><i>Incoming:</i> <i>300 IPM Red blink</i></p> <p><i>Talking:</i> <i>Green Light- ing (on Talk- ing TEL)</i> <i>LED Off</i></p> <p><i>Holding:</i> <i>60 IPM Green blink (on holding TEL)</i> <i>LED Off</i></p>	0
02	<p>Trunk Loop Access Key Operating Mode</p> <p>Use this option to set the operating mode of the extension's trunk group keys. The keys can be for incoming access, outgoing access or both.</p>	<p>0 = Outgoing / Incoming 1 = Outgoing 2 = Incoming</p>	0
03	<p>BLF Control</p> <p>Set the conditions under which a Hot-line, Reverse Voice Over or DSS Console key indicates that an extension is busy. Refer to the Reverse Voice Over feature for more information.</p>	<p>0 = Idle / Busy (ON/OFF) 1 = Busy / Idle (ON/OFF)</p>	1
04	<p>Retrieve the Line After Transfer</p> <p>Enable (1) or disable (0) an extension's ability to answer a call after it's been transferred, but before it's answered.</p>	<p>0 = Not Holding 1 = Holding</p>	1

Program 20 : System Option Setup

20-02 : System Options for Multi-Line Terminals

Item No.	Item	Input Data	Default
05	<p>Headset Busy Mode Set the conditions under which a headset extension is busy to incoming callers.</p> <p>When Call Queuing (Program 20-09-07) is turned off, this setting is followed.</p>	<p>0=Headset busy with one CALL key busy 1=Headset busy with both CALL keys busy</p>	0
06	<p>Preselection Time When a keyset user preselects a line key, the UX5000 remembers the preselection for this interval.</p>	0-64800 seconds	5
07	<p>Time and Date Display Mode Set how the Time and Date appear on display terminals. There are eight display modes.</p>	<p>1-8 Type 1: (12 hour) 10 MAR TUE 3:15PM Type 2: (12 hour) 3:15PM MAR 10 TUE Type 3: (12 hour) 3-10 TUE 3:15 PM Type 4: (12 hour) 3:15PM TUE 10 MAR Type 5: (24 hour) 10 MAR TUE 15:15 Type 6: (24 hour) 15:15 MAR 10 TUE Type 7: (24 hour) 3-10 TUE 15:15 Type 8: (24 hour) 15:15 TUE 10 MAR</p>	3
08	<p>LCD Display Holding Time This timer determines how long a user's display will show Caller ID for a second incoming call.</p>	0-64800 seconds	5
09	<p>Disconnect Supervision Use this option to enable or disable disconnect supervision for the UX5000 trunks.</p>	<p>0 = Disable 1 = Enable</p>	1
10	<p>Time Before Shifting to Power-Saving Mode When the Power Saving Mode is enabled for an extension in Program 15-02-18, use this option to determine when the mode is activated.</p>	<p>0 = Power-Saving Mode Off 1 = 1 minutes 2 = 2 minutes 3 = 4 minutes 4 = 8 minutes 5 = 16 minutes 6 = 32 minutes 7 = 64 minutes</p>	0
11	<p>Handsfree Microphone Control Use this option to set the default setting for a keyset's Handsfree microphone on UX5000 start up. If set to 0, a user can place a call Handsfree without lifting the handset. If set to 1, a user can initially place a call Handsfree but must lift the handset to talk or press their MIC key. <i>Changes to this option will take affect when the UX5000 is reset.</i></p>	<p>0 = Off 1 = On</p>	1

Program 20 : System Option Setup

20-02 : System Options for Multi-Line Terminals

Item No.	Item	Input Data	Default
12	Forced Intercom Ringing Use this option to set voice-announce or Forced Intercom Ringing by default. Once this option is changed by a user with service codees 821/823, this setting is ignored for that extension.	0 = Voice 1 = Ring	0
13	- Not Used -		
14	- Not Used -		
15	Caller ID Display Mode Determine how the Caller ID should be displayed for all i-Series terminals when an incoming call is received. Once the call is answered, the first line will indicate the trunk number and caller timer (if enabled).	0 = Displays the line number on line one and the Caller ID name and number on line 2. 1 = Line 1 displays Caller ID number, Line 2 displays Caller ID name 2 = Line 1 displays Caller ID name, Line 2 displays Caller ID number	0
18	Caller ID Display Time Use this option to determine how long a Caller ID record will be displayed on the terminal's display when reviewing the Caller ID calls. This is separate from the pre-selection timer set in Program 20-02-06.	0-64800 seconds	30
19	DSS Key Virtual Extension Mode Select how the virtual extension displays when pressed. If enabled, it displays as the virtual extension.	0 = Disabled 1 = Enabled	0

20-03 : System Options for Single Line Terminals

Level:

IN

Feature Availability

- Available.

Description

Use **Program 20-03 : System Options for Single Line Terminals** to set up various options for Single Line Terminals.

Input Data

Item No.	Item	Input Data	Default	Related Program
01	<p>SLT Call Waiting Answer Mode For a busy single line (500/2500 type) terminal, set the mode used to answer a camped-on trunk call. For ESL sets, enabling this option (1) allows the user to dial Service Code 154 for Voice Mail Conversation Record.</p>	0 = Hook Flash 1 = Hook Flash + Service code (894)	0	11-12-47
02	<p>Ignore Received DP Dial on DTMF SLT Port Use this option to define whether the UX5000 should receive dial pulse and DTMF signals (0) or ignore dial pulse and only accept DTMF signals (1).</p>	0 = Do Not Ignore 1 = Ignore	0	15-03-01
03	<p>SLT DTMF Dial to Trunk Lines</p> <ul style="list-style-type: none"> • Type 0 : The UX5000 keeps the digits dialed by the SLT on a trunk in a buffer. After all the digits have been received, the UX5000 sends all the digits to the trunk. If the time space between digits is longer than the timer in Item 4, the UX5000 considers all digits received. • Type 1 : The UX5000 passes the received digits from the SLT to the trunk immediately. If the SLT has a Last Number Dial key without a pause, this key may not be able to use the Last Number Dial key with the Type 1 setting. <p>When using a 3rd-party external paging device, set this option to "1". In addition, set Program 20-03-04 to "1". These programs must be set in order for IP DECT users to be able to break dial tone on an analog trunk that is used for paging.</p> <p><u><i>If an UX5000 is used as a PBX/Centrex system with Centrex Call Forwarding feature:</i></u> When a UX5000 is connected to a PBX system and it uses a trunk defined as "Behind PBX" in Program 14-04-01 to place the Call Forward, it is strongly recommended that the PBX/Centrex system have immediate dial enabled (set to 1) and not store and forward.</p>	0 = Receive all dialed data, before sending. 1 = Direct through out	0	20-03-04

Program 20 : System Option Setup

20-03 : System Options for Single Line Terminals

Item No.	Item	Input Data	Default	Related Program
04	<p>Dial Sending Start Time for SLT or ARS When ARS or an analog extension user accesses a trunk and dials an outside call, the UX5000 waits this interval before outdialing the first digit. The timer will restart when a user dials another digit.</p> <p>When using a 3rd-party external paging device, set this option to "1". In addition, set Program 20-03-03 to "1".</p>	0-64800 seconds	3	20-03-03 20-03-07
05	SLT Operation Mode	0 = Normal Mode 1 = Extended Mode 1 2 = Extended Mode 2	0	
06	<p>Headset Ringing Start Time Define the headset ringing start time. After this timer expires from the time when a SLT is off hook, the UX5000 will set the SLT to headset ringing mode.</p>	0-64800 seconds	5	20-13-38
07	<p>Forced Dial Sending Start Time This option is used for SLT DTMF dialing. When Program 20-03-03 (SLT DTMF Dial to Trunk Lines) is set to "0" (receive all digits before sending), the UX5000 will following the timers in Program 20-03-04 and 23-03-07.</p> <p>The timer in Program 20-03-04 : System Options for Single Line Terminals - Dial Sending Start Time for SLT or ARS will reset when the user dials another digit.</p> <p>This timer will not reset when a digit is dialed. The user must finish dialing all the digits before this timer expires.</p>	0-64800 seconds	0	20-03-03 20-03-04

Program 20 : System Option Setup

20-10 : Class of Service Options (Answer Service)

Level:

IN

Feature Availability

- Available.

Description

Use **Program 20-10 : Class of Service Options (Answer Service)** to define the answer feature availability for each extension's Class of Service.

Input Data

Class of Service Number	01-15
-------------------------	-------

Class of Service Options (Answer Service), Program 20-10				
Item No.	Item	Input Data	Default	
			COS 01-14	COS 15
01	Group Call Pickup (Within Group) Turn off or on Group Call Pickup for calls ringing an extension's own Pickup Group as well as ring group calls (Service Code *#).	0 = Off 1 = On	1	1
02	Group Call Pickup (Another Group) Turn off or on Group Call Pickup for calls ringing outside a group (Service Code 869).	0 = Off 1 = On	1	1
03	Group Call Pickup for Specific Group Turn off or on Group Call Pickup for a specific group using service code 868.	0 = Off 1 = On	1	1
04	Group Call Pickup Turn off or on an extension's ability to pick up a call ringing into a Pickup Group (Service Codes *# and 856).	0 = Off 1 = On	1	1
05	Directed Call Pickup for Own Group Turn off or on Directed Call Pickup for calls ringing an extension's own Pickup Group (Service Code 856).	0 = Off 1 = On	1	1
06	Meet Me Conference and Paging Turn off or on an extension's ability to use Meet Me Conference and Paging.	0 = Off 1 = On	1	1
07	Automatic Answer of Universal Calls Turn off or on an extension's ability to use Universal Auto Answer (no service code required).	0 = Off 1 = On	0	0
08	Auto Off-Hook Answer for Call Coverage Keys Turn off or on an extension's ability to answer an incoming call on a Call Coverage Key simply by lifting the handset.	0 = Off 1 = On	0	0

Program 20 : System Option Setup

20-14 : Class of Service Options for DISA/E&M

Level:	Feature Availability
IN	<ul style="list-style-type: none"> Available.

Description

Use **Program 20-14 : Class of Service Options for DISA/E&M** to enable/disable DISA and tie line Class of Service options. You assign a DISA Class of Service to DISA users in Program 25-09. Assign tie line Classes of Service in 34-02. Up to 15 DISA/E&M Classes of Service can be defined.

Note: Analog trunk-to-analog trunk and ISDN trunk-to-ISDN trunk calls are supported by this program. However, analog trunk-to-ISDN trunk and ISDN trunk-to-analog trunk calls are NOT supported by this program.

Input Data

Class of Service Number	01-15
-------------------------	-------

Class of Service Options (DISA/E&M Service), Program 20-14				
Item No.	Item	Input Data	Default	
			COS 01-14	COS 15
01	First Digit Absorption For tie lines, enable or disable the ability to absorb (ignore) the first incoming digit. Use this to make the tie trunk compatible with 3- and 4-digit tie line service. This option does not apply to DISA.	0 = Off 1 = On	0	0
02	Trunk Group Routing/ARS Access This option enables or disables a DISA or tie trunk caller's ability to dial 9 for Trunk Group Routing or Automatic Route Selection (ARS).	0 = Off 1 = On	0	0
03	Trunk Group Access This option enables or disables a DISA or tie trunk caller's ability to access trunk groups for outside calls (Service Code 814).	0 = Off 1 = On	0	0
04	Common Abbreviated Dialing This option enables or disables a DISA or tie trunk caller's ability to use the UX5000's Common Abbreviated Dialing.	0 = Off 1 = On	0	0
05	Operator Calling This option enables or disables a DISA or tie trunk caller's ability to dial 0 for the UX5000 operator.	0 = Off 1 = On	0	0
06	Internal Paging This option enables or disables a DISA or tie trunk caller's ability to use the UX5000's Internal Paging.	0 = Off 1 = On	0	0
07	External Paging This option enables or disables a DISA or tie trunk caller's ability to use the UX5000's External Paging.	0 = Off 1 = On	0	0

Program 20 : System Option Setup

20-16 : Selectable Display Messages

Level:

SA

Feature Availability

- Available.

Description

Use **Program 20-16 : Selectable Display Messages** to enter the Selectable Display Messages. There are 20 alphanumeric messages, up to 24 characters long. Use the following chart when programming messages.

Key for Entering Names	
When entering names in the procedures below, refer to this chart. Names can be up to 12 digits long.	
Use this keypad digit . . .	When you want to . . .
1	Enter characters: 1 @ [¥] ^ _ ` { } → ← Á À Â Ã Ä Ç È É Ê Ì Ó 0
2	Enter characters A-C, a-c, 2.
3	Enter characters D-F, d-f, 3.
4	Enter characters G-I, g-i, 4.
5	Enter characters J-L, j-l, 5.
6	Enter characters M-O, m-o, 6.
7	Enter characters P-S, p-s, 7.
8	Enter characters T-V, t-v, 8.
9	Enter characters W-Z, w-z, 9.
0	Enter characters: 0 ! “ # \$ % & ’ () ô o ú å ä ö ü α ε θ
*	Enter characters: * + , - . / : ; < = > ? π Σ σ Ω ∞ φ ε
#	# = Accepts an entry (only required if two letters on the same key are needed - ex: TOM). Pressing # again = Space. (In UX5000 programming mode, use the right arrow soft key instead to accept and/or add a space.)
CONF	Clear the character entry one character at a time.
CLEAR	Clear all the entries from the point of the flashing cursor and to the right.

Description

Use Program **20-17 : Operator's Extension** to designate an operator. When an extension user dials "0" or "9" (defined by Program 11-01 Type 5), calls go to the operator selected in this program.

If you don't assign an extension in Program 90-11-01, UX5000 alarms appear on the extension assigned in this option.

Input Data

Operator Number	1-8
-----------------	-----

Item No.	Item	Input Data	Default	Related Program
01	Operator's Extension Number Define the extension numbers which are to be used as operators.	Up to 8 digits	301	11-01 20-01-01
02	Operator Console Mode Determine if the operator's keyset will act as a normal keyset (0) or if keys 13-24 will be used for Personal Park of outside calls (1). With this option, an operator may not need a DSS Console.	0 = Normal keyset 1 = Special Operator Console	0	

Conditions

None

Feature Cross Reference

- Intercom

Program 20 : System Option Setup

Terminal Programming Instructions

To enter data for Program 20-17 (Operator's Extension):

1. Enter the programming mode.
2. 20 17

```
20-17-01 Operator1
Operator_No.
back ↑ ↓ select
```

3. Enter the number of the item you want to program.

```
20-17-nn Operatorn
nnnnn
← - + →
```

4. Enter the operator number to be defined or press FLASH to use the displayed entry.
5. Enter data for the item you selected + HOLD.
6. Enter data for the next item in the program.
OR
Press MIC once to enter a new item number.
OR
Press MIC until you've exited that series's programming section.

Program 20 : System Option Setup

20-18 : Service Tone Timers

Level:

IN

Feature Availability

- Available.

Description

Use **Program 20-18 : Service Tone Timer** to set the values for the UX5000 service tone timers. Refer to the following chart for a description of each option, its range and default setting.

Input Data

Item No.	Item	Input Data	Default	Description	Related Program
01	Extension Dial Tone Time	0-64800 seconds	30	After getting Intercom dial tone, a keyset user has this interval to dial the first digit of the Intercom call.	
02	Busy tone timer	0-64800 seconds	15		
03	Congestion tone	0-64800 seconds	10	A Busy Tone when UX5000 resources run short. (such as DTMF receiver resources)	
04	Call Waiting Tone Timer	0-64800 seconds	10	This option sets the interval between Call Waiting tones. This timer also sets the interval between Off Hook Signaling alerts.	
05	Keyset Confirmation Tone	0-64800 seconds	10		
06	Interval of call waiting tone	0-64800 seconds	10	Determine the interval between Call Waiting tones. If set to "0", the tone will only be heard once.	
07	Intrusion Tone Repeat Time	0-64800 seconds	0	After a call is interrupted (such as Barge In, Voice Mail Conversation Recording, Voice Over, etc), the UX5000 repeats the Intrusion Tone after this interval. Normally, you should enter 0 to disable this interval.	
08	Conference Tone Interval	0-64800 seconds	0		

Program 20 : System Option Setup

20-18 : Service Tone Timers

09	Incoming Warning Beep Tone Signaling Interval	0-64800 seconds	60	When an incoming trunk is set to use the warning tone, define the interval between the tones. The warning tones continue, spaced by this interval, until the user hangs up.	14-01-18

Terminal Programming Instructions

To enter data for Program 20-18 (Service Tone Timers):

1. Enter the programming mode.
2. 20 18

3. Enter the number of the item you want to program.

4. Enter data for the item you selected + HOLD.
5. Enter data for the next item in the program.
OR
Press MIC once to enter a new item number.
OR
Press MIC until you've exited that series's programming section.

Program 20 : System Option Setup

20-19 : System Options for Caller ID

Level:

IN

Feature Availability

- Available.

Description

Use **Program 20-19 : System Options for Caller ID** to define the UX5000 options for the Caller ID feature.

Input Data

Item No.	Item	Input Data	Default	Related Programs
01	Caller ID Displaying Format if Displaying Digits are more than 12 digits. When Caller ID has more than 12 digits, determine which digits should be shown - the first 10 (0) or the last 10 (1).	0 = First 10 digits 1 = Last 10 digits	0	
02	Caller ID Wait Timer When an incoming CO call is received, the UX5000 starts the timer. It will wait the programmed time for Caller ID information from telco before connecting the CO call.	0-30 seconds	5	
03	Caller ID Edit Mode If Caller ID Edit Mode is disabled (0), no trunk access code will be added to the Caller ID. If this option is enabled (1), the trunk access code entered in Program 10-02-05 will be added to the beginning of the Caller ID.	0 = off 1 = on	0	
04	Wait Facility IE Timer This timer is used with ISDN trunks to determine how long the UX5000 will wait for the Caller ID name from the telco.	0-64800 seconds	10	
05	Caller ID Sender Queuing Timer With the Caller ID Sender Queuing feature, determine how long an incoming call will wait in queue for a DSP resource to become available. If a resource becomes available during this time, the call will immediately ring the SLT with Caller ID. If the timer expires before a resource becomes available, then UX5000 rings the single line terminal without Caller ID (until the timer expires, the SLT will not ring). If the queuing timer is set to "0", the UX5000 does not queue the incoming call.	0-64800 seconds	0	
06	- Not Used -	-	-	
07	Long Distance Code With the Caller ID feature, use this option to define the digit(s) to be added which are required for dialing a long distance number. For example in the number "1-203-926-5400", "1" is the long distance code.	2 Digits (0-9)	1	15-02-15 20-09-02 15-07-01

Program 20 : System Option Setup

20-19 : System Options for Caller ID

08	Area Code With the Caller ID feature, use this option to define the area code which will be deleted when using the Edit Caller ID List feature to edit a number.	6 Digits (0-9)	-	15-02-15 20-09-02 15-07-01
----	--	----------------	---	----------------------------------

Program 20 : System Option Setup

20-22 : System Options for IP DECT Service

Level:

IN

Feature Availability

- Available.

Description

Use **Program 20-22 : System Options for IP DECT Service** to define the time the UX5000 waits before determining the IP DECT terminal is out of range. For incoming calls, the timer begins when the call is received. If the time defined here expires before the IP DECT terminal starts to ring, the UX5000 determines the terminal is out of range and provides the out-of-range services (indicates out-of range, transfers the call to voice mail or to another extension).

Input Data

Item No.	Description	Input Data	Default	Related Program
05	- Not Used -			
06	Out of Area Talkie Setting Use this option to determine which VRS message is played when the IP DECT terminal is out of range.	0-100	0	

Conditions

Program 20 : System Option Setup

20-31 : Timer Data

Level:

IN

Feature Availability

- Available.

Description

Use **Program 20-31 : Timer Data** to assign the time entry for each timer. These timers are used when a class is set with an entry from 1 to 15 in Program 20-28-01 and 20-29-01. When the timer class is set to 0, the system-wide timer is used instead.

Input Data

Timer Class of Service	1-15
------------------------	------

Class of Service Timer Data, Program 20-31					
Item	Default: Class 0 Follows Program	Type	Timer	Default	Input Data
01	20-01-08	Extension Timer Class of Service	Trunk Queuing Callback Duration Time Trunk Queuing callback rings an extension for this interval.	15	0-64800
02	20-01-09	Extension Timer Class of Service	Callback / Trunk Queuing Cancel Time The UX5000 cancels an extension's Callback or Trunk Queuing request after this interval.	64800	0-64800
03	20-04-03	Extension Timer Class of Service	Call Coverage Delay Interval Time (Virtual Extension Key) If Call Coverage Keys are set for Delayed Ringing (Program 15-11), the call rings the covering extension after this interval.	10	0-64800
04	21-01-02	Extension Timer Class of Service and Trunk Timer Class of Service	Intercom Interdigit Time When placing Intercom calls, users must dial each digit within this interval.	10	0-64800
05	21-01-03	Extension Timer Class of Service and Trunk Timer Class of Service	Trunk Interdigit Time When placing CO calls, users must dial each digit within this interval.	5	0-64800
06	21-01-09	Extension Timer Class of Service	Hotline Time Start Time A Ringdown extension automatically calls its programmed destination after this interval.	5	0-64800

Program 20 : System Option Setup

20-31 : Timer Data

Class of Service Timer Data, Program 20-31					
Item	Default: Class 0 Follows Program	Type	Timer	Default	Input Data
07	22-01-03	Trunk Timer Class of Service	Ring No Answer Alarm Time If a trunk rings a key terminal longer than this interval, the UX5000 changes the ring cadence. This indicates to the user that the call has been ringing too long.	60	0-64800
08	22-01-04	Trunk Timer Class of Service	DIL/Incoming Ring Group No Answer Time A DIL that rings its programmed destination longer than this interval diverts to the DIL No Answer Ring Group (set in Program 22-08).	0	0-64800
09	22-01-06	Trunk Timer Class of Service	DID Ring-No-Answer Time In UX5000s with DID Ring No Answer Intercept, this interval sets the Ring No Answer time. This interval is how long a DID call rings the destination extension before rerouting to the intercept ring group.	20	0-64800
10	24-01-01	Extension Timer Class of Service and Extension's Class of Service	Hold Recall Time (Non exclusive Hold) A call on Hold recalls the extension that placed it on Hold after this interval.	90	0-64800
11	24-01-02	Extension's Class of Service	Hold Recall CallBack Time (Non exclusive Hold) A trunk recalling from Hold an extension for this interval.	30	0-64800
12	24-01-03	Extension Timer Class of Service and Extension's Class of Service	Exclusive Hold Recall Time A call on Hold recalls the extension that placed it on Hold after this interval.	90	0-64800
13	24-01-04	Extension's Class of Service	Exclusive Hold Recall Callback Time An Exclusive Hold Recall rings an extension for this interval. If not picked up, the call goes back on non-exclusive Hold.	30	0-64800
14	24-01-06	Extension Timer Class of Service and Extension's Class of Service	Park Hold Time – Normal A call left parked longer than this interval recalls the extension that initially parked it.	90	0-64800
15	24-02-03	Extension Timer Class of Service	Delayed Call Forwarding Time If activated at an extension, No Answer Call Forwarding occurs after this interval.	10	0-64800

Program 20 : System Option Setup

20-31 : Timer Data

Class of Service Timer Data, Program 20-31					
Item	Default: Class 0 Follows Program	Type	Timer	Default	Input Data
16	24-02-04	Extension Timer Class of Service and Extension's Class of Service which performed the blind transfer	<p>Transfer Recall Time A blind transferred call recalls to the extension that initially transferred it after this interval.</p>	30	0-64800
17	25-07-02	Trunk Timer Class of Service	<p>DID/DISA No Answer Time (Disconnect or IRG or VM) After this interval expires, the call follows the programmed Ring No Answer routing (set in Program 25-04).</p>	30	0-64800
18	25-07-03	Trunk Timer Class of Service	<p>Disconnect after Re-transfer to IRG Disconnect after re-transfer to Incoming Ring Group.</p>	60	0-64800
19	25-07-07	Trunk Timer Class of Service	<p>Long Conversation Warning Tone Time (Trunk to Trunk) Determine the length of time trunk-to-trunk conversation can talk before the Long Conversation tone is heard.</p>	180	0-64800
20	25-07-08	Trunk Timer Class of Service	<p>Long Conversation Disconnect (Trunk to Trunk) This timer determines how long the UX5000 will wait before disconnecting a trunk-to-trunk conversation call after the Long Conversation tone is heard.</p>	10	0-64800
21	25-07-09	Trunk Timer Class of Service	<p>DISA Internal Paging Time This is the maximum length of an Internal Page placed by a DISA caller. If the Page continues longer than this interval, the UX5000 terminates the DISA call. Use for analog trunks only.</p>	30	0-64800
22	25-07-10	Trunk Timer Class of Service	<p>DISA External Paging Time This is the maximum length of an External Page placed by a DISA caller. If the Page continues longer than this interval, the UX5000 terminates the DISA call. Use for analog trunks only.</p>	30	0-64800
23	31-01-02	Extension Timer Class of Service and Trunk Timer Class of Service	<p>Page Announcement Duration This timer sets the maximum length of External Page announcements. <i>Not used for analog trunks (use item 22 above instead).</i></p>	1200	0-64800

Terminal Programming Instructions

To enter data for Program 20-31 (Timer Data):

1. Enter the programming mode.
2. 20 31

```
20-31-01  Timer Class1
nnnnn
back  ↑      ↓  select
```

3. Enter the number of the item you want to program.

```
20-31-nn  Timer Classx
nnnnn
←      -      +      →
```

4. Enter the Class of Service number to be defined or press FLASH to use the displayed entry.
5. Enter data for the item you selected + HOLD.
6. Enter data for the next item in the program.
OR
Press MIC once to enter a new item number.
OR
Press MIC until you've exited that series's programming section.

Program 20 : System Option Setup

20-34 : Remote Conference Group Setup

Level:

SA

Feature Availability

- Available.

Description

Use **Program 20-34 : Remote Conference Group Setup** to define the Remote Conference options.

Input Data

Item No.	Item	Input Data	Default
01	Conference Name Enter the name displayed at the time of a Remote Conference. This entry will display on the keyset LCD.	Up to 12 characters	Group 1 = Conf 1 Group 2 = Conf 2 Group 3 = Conf 3 Group 4 = Conf 4
02	Password Define the password of a Remote Conference.	4 (fixed) (0-9,@=wild character)	Group 1 = 1111 Group 2 = 2222 Group 3 = 3333 Group 4 = 4444
03	Max Participants Define the maximum number of participants of a Remote Conference.	0-32	8
04	Max Conference Duration Define the maximum duration of a Remote Conference. When this time passes, the conference is disconnected by the UX5000.	0-64800 seconds	7200
05	End Tone Alert Time Determine how long prior disconnecting a Remote Conference call (based on the maximum conference duration above) the UX5000 should send out a beep. This is used to warn the conference participants of the pending disconnect.	0-64800 seconds	300

Press MIC once to enter a new item number.
OR
Press MIC until you've exited that series's programming section.

Program 21 : Outgoing Call Setup

21-01 : System Options for Outgoing Calls

Level:

IN

Feature Availability

- Available.

Description

Use **Program 21-01 : System Options for Outgoing Calls** to set the UX5000 options for Outgoing Call Service.

Input Data

Item No.	Item	Input Data	Default	Related Program
01	Seizure Trunk Line Mode Determine if trunks are seized based on priority (set in Program 14-05/14-06) or if by next available (longest free).	0 = Priority route 1 = Circular route	0	14-05 14-06
02	Intercom Interdigit Time When placing Intercom calls, extension users must dial each digit within this interval.	0-64800 Seconds	10	20-31-04
03	Trunk Interdigit Time (External) The UX5000 waits for this timer to expire before placing the call in a talk state (Call Timer starts after timer expires, Voice Over and Barge-In are not allowed until after timer expires). If set to "0", Voice Over and Barge In will not work for external calls. This timer affects CO and PRI outdialing.	0 = Disabled 1-64800 Seconds	5	14-02-08 20-31-05
04	Dial Tone Detection Time If dial tone detection is enabled, the UX5000 will wait this interval for the Telco to return dial tone. When the interval expires, the UX5000 assumes dial tone is not present. To disable this timer (and have the UX5000 wait continuously), enter 0. This timer is also used to determine the time allowed between Account Code digit entry.	0-64800 Seconds	5	14-02-05 35-05-01
05	Disconnect Time The UX5000 waits for this timer to expire before disconnecting a call when dial tone is not detected.	0-64800 Seconds	3	
06	Dial Pause at First Digit Before outdialing the first digit, the UX5000 waits this interval before outdialing a user's first manually-dialed digit. Additional digits outdial without delay.	0-64800 Seconds	1	14-02-06

Program 21 : Outgoing Call Setup

21-01 : System Options for Outgoing Calls

Item No.	Item	Input Data	Default	Related Program
07	Toll Restriction Override Time After dialing the Toll Restriction Override codes, the UX5000 removes Toll Restriction from the extension for this interval.	0-64800 Seconds	10	20-08-06 21-07
08	Preset dial display hold time	0-64800 Seconds	10	20-08-09 21-11
09	Ringdown Extension Timer A Ringdown extension automatically calls its programmed destination after this interval.	0-64800 Seconds	5	20-08-09 20-31-06 21-11
10	Dial Digits for Toll Restriction Path If this option is programmed with an entry other than "0", a call will not have a talk path for the time defined in 21-01-11 unless the user dials at least the number of digits entered in this option when placing an outgoing call. This means that an entry of 4 or higher in this program will cause a problem when dialing 911. Since it is only a 3-digit number, the call will not have a talk path, preventing the emergency dispatcher from hearing the caller. It is recommended that this option be kept at its default setting of "0" to prevent any problems with dialing 911.	0-24	0	21-01-11
11	Inter-Digit Time for Toll Restriction Path Control For analog trunks only, if a user does not dial the minimum number of digits for an outgoing call (as defined in 21-01-10), determine how long the talk path will be delayed for the call. The transmit speech path is disconnected to prevent a user from placing a DTMF tone dialler to the mic and bypassing Toll Restriction and SMDR.	0-60	0	21-01-10
12	Dial 911 Routing Without Trunk Access If enabled (1), an extension user can dial 911 without first dialing a trunk access code or pressing a line key. If disabled (0), an extension user must dial a trunk access code (e.g., 9) or press a line key before dialing 911.	0 = Trunk Access Code Required 1 = Trunk Access Code Not Required	1	
13	Alarm Ring Timer (E911) Use this option to set the duration of the E911 Alarm Ring Time. If set for 0, the E911 Alarm will ring for 60 seconds.	0, 1-64800 Seconds (0 = 60 Seconds)	0	11-12-56 20-08-16
14	Forced Account Code Inter-digit Timer The UX5000 waits this interval for a user to enter a Forced Account code.	0-64800 Seconds	3	

Program 21 : Outgoing Call Setup

21-01 : System Options for Outgoing Calls

Item No.	Item	Input Data	Default	Related Program
15	Outgoing Disable on Incoming Line Enable or disable the Outgoing Disable on Incoming Line feature.	0 = Disable 1 = Enable	0	15-01-05 21-01-16 21-01-17 80-03-01
16	Supervise Dial Detection Timer With the Outgoing Disable on Incoming Line feature, if dial tone is not detected after the extension answers an incoming line, the UX5000 determines the call is unable to complete and releases the DTMF receiver.	0-64800 Seconds	20	15-01-05 21-01-15 21-01-17 80-03-01
17	Restriction Digit in Outgoing Disable on Incoming Line With the Outgoing Disable on Incoming Line feature, determine the number of digits to be dialed before the call should be disconnected.	Digits 0-9	4	15-01-05 21-01-15 21-01-16 80-03-01

Program 21 : Outgoing Call Setup

21-05 : Toll Restriction Class

Level:

IN

Feature Availability

- Available.

Description

Use **Program 21-05 : Toll Restriction Class** to set the UX5000's Toll Restriction classes (1-15).

Input Data

Toll Restriction Class Number	1-15
-------------------------------	------

Item No.	Item	Input Data	Description	Related Program
01	International call restriction table	0 = Unassigned 1 = Assigned	This option assigns/unassigns the International Call Restrict Table for the Toll Restriction Class you are programming. Enter International Call Restrict Table data in Program 21-06-01.	21-06-01
02	International call permit code table	0 = Unassigned 1 = Assigned	This option assigns/unassigns the International Call Permit Table for the Toll Restriction Class you are programming. Enter International Call Permit Table data in Program 21-06-02.	21-06-02
03	Not Used			
04	Maximum Number of Digits Table Assignment	1-4 = Table 0 = Disable	Select the table (defined in 21-06-03) to be used to determine the maximum number of digits allowed for outgoing calls.	21-06-03
05	Common permit code table	0 = Unassigned 1 = Assigned	It chooses whether the table set up by 21-06-04 is referred to, or not referred to.	21-06-04
06	Common restriction table	0 = Unassigned 1 = Assigned	It chooses whether the table set up by 21-06-05 is referred to, or not referred to.	21-06-05
07	Permit code table	1-4 = Table 0 = Disable	Set the tables 1-4 when referring to the table set up by 21-06-06.	21-06-06
08	Restriction table	1-4 = Table 0 = Disable	Set the tables 1-4 when referring to the table set up by 21-06-07.	21-06-07
09	Restriction for common abbreviated dials	0 = Does not restrict 1 = Following restriction check	Use this option to enable/disable Toll Restriction for Common Abbreviated Dialing numbers. If enabled, Common Abbreviated Dialing numbers have the same restrictions as manually dialed numbers.	
10	Restriction for group abbreviated dials	0 = Does not restrict 1 = Following restriction check	Use this option to enable/disable Toll Restriction for Group Abbreviated Dialing numbers. If enabled, Group Abbreviated Dialing numbers have the same restrictions as manually dialed numbers.	

Program 21 : Outgoing Call Setup

21-05 : Toll Restriction Class

Item No.	Item	Input Data	Description	Related Program
11	Intercom Call Restriction	0 = Disable 1 = Enable	This option determines whether an ICM incoming call is restricted.	
12	PBX Call Restriction	0 = Disable 1 = Enable	Use this option to set how the UX5000 Toll Restricts calls over PBX trunks. If you enable PBX Toll Restriction, the UX5000 begins Toll Restriction after the PBX access code. The user cannot dial a PBX extension. If you disable PBX Toll Restriction, the UX5000 only restricts calls that contain the PBX access code. The UX5000 does not restrict calls to PBX extensions. Refer to the PBX compatibility feature. Make sure Program 21-05-04 (Maximum Number of Digits Table Assignment) allows for PBX Toll Call Dialing (normally 12 digits).	
13	Restriction of Tie Line Calls	0 = Disable 1 = Enable	It chooses whether the toll restriction of the dial set up by 34-08 is enabled or disabled.	34-08
14	Restrict Trunk Transfer for Incomplete Dial	-	<i>- Not Used in U.S. -</i>	
15	Restrict Common Hold for Incomplete Dial	-	<i>- Not Used in U.S. -</i>

Program 21 : Outgoing Call Setup

21-06 : Toll Restriction Table Data Setup

Level:

IN

Feature Availability

- Available.

Description

Use **Program 21-06 : Toll Restriction Table Data Setup** to set the UX5000's Toll Restriction data. Dial 1-9, 0, *, # can be entered in each table.

Note: The item numbers indicated below are different when using PCPro/WebPro due to the window layout of the applications. Refer to the program within the PCPro/WebPro application to determine the correct item number.

Input Data

Item No.	Item	Table	Input Data	Default
01	International Call Restriction Table This option lets you program the Restrict Table for international calls. The UX5000 has 10 International Call Restrict Tables. Each entry can be up to four digits long.	1-10	Dial (Up to 4 digits)	Table 1-10 = No Setting
02	International Call Permit Code Table This option lets you program the Permit Table for international calls. The UX5000 has 20 International Call Permit Table. Each entry can be up to six digits long, using.	1-20	Dial (Up to 6 digits)	No Setting
03	Maximum Number Digits Table Assignment This option selects the maximum number of digits allowed in outgoing calls for each table.	1-4	4-30	Tables 1 - 4 = 30
04	Common Permit Code Table This option lets you program the Common Permit Code Table. This table contains up to 10 codes you commonly allow users to dial.	1-10	Dial (Up to 4 digits)	Table 1 = 911 Table 2 = 1800 Table 3 = 1888 Table 4 = 1822 Table 5 = 1833 Table 6 = 1844 Table 7 = 1855 Table 8 = 1866 Table 9 = 1877 Table 10 = No Setting
05	Common Restriction Table This option lets you program the Common Restrict Code Table. This table contains up to 10 codes you commonly prevent users from dialing.	1-10	Dial (Up to 12 digits)	Table 1 = 900 Table 2 = 1900 Table 3 = 976 Tables 4 = 10 = No Setting

Program 21 : Outgoing Call Setup

21-06 : Toll Restriction Table Data Setup

Item No.	Item	Table	Input Data	Default
06	<p>Permit Code Table</p> <p>This option lets you program the Permit Code Tables. If the UX5000 has Toll Restriction enabled, users can dial numbers only if permitted by these tables and the Common Permit Table (21-06-04). There are four Permit Code Tables, with up to 200 entries in each table. The UX5000 permits calls exactly as you enter the code.</p>	1-4 (table) 1-60 (Entry)	Dial (Up to 12 digits)	Table 1 - 4 = No Setting
07	<p>Restriction Table</p> <p>This option lets you program the Restrict Code Tables (21-06-05). If the UX5000 has Toll Restriction enabled, users cannot dial numbers listed in these tables. There are four Restrict Code Tables, with up to 200 entries in each table. The UX5000 restricts calls exactly as you enter the code.</p>	1-4 (table) 1-60 (Entry)	Dial (Up to 12 digits)	Table 1 - 4 = No Setting
08	<p>PBX Access Code</p> <p>Use this option to enter the PBX Access Code. When the UX5000 is behind a PBX, this is the code users dial to access a PBX trunk. Toll Restriction begins after the PBX access code. For PBX trunks (Program 14-04) the UX5000 only Toll Restricts calls that contain the access code. Always program this option when the UX5000 is behind a PBX, even if you don't want to use Toll Restriction. PBX Access Codes can be up to 2 digits, using 0-9, #, * and LINE KEY 1 (don't care). When using Account Codes, do not use an asterisk within a PBX access code. Otherwise, after the *, the trunk would stop sending digits to the central office. Entries 1-4 correspond to the 4 PBX Access Codes. Each code can have up to 2 digits.</p>	1-4	Dial (Up to 2 digits)	Table 1 - 4 = No Setting
09	<p>Specific Dial Outgoing Code</p> <p>This option can be used to exempt digits from toll restriction. The digits entered in this option will bypass the toll restriction programming. The digits to be exempt can be positioned before or after the entry in Program 21-06-10.</p>	1-20	Dial (Up to 8 digits)	No Setting
10	<p>Outgoing Call Code Setup</p> <p>This option can be used to exempt digits from toll restriction. The digits entered in this option will bypass the toll restriction programming. This is similar to Program 21-06-09, however, these digits must be first.</p> <p>For example, if a UX5000 restricts international dialing (011), it could be possible to allow the UX5000 to dial 1010XXX + 011 or *67 + 011. In order to dial *67 + 1010XXX + 011, *67 would be entered in Program 21-06-10 and 1010XXX would be entered in Program 21-06-09.</p>	1-20	Dial (Up to 4 digits)	No Setting

Program 21 : Outgoing Call Setup

21-08 : Repeat Dial Setup

Terminal Programming Instructions

To enter data for Program 21-08 (Repeat Dial Setup):

1. Enter the programming mode.
2. 21 08

```
21-08-01
Repeat_Times 3
back ↑ ↓ select
```

3. Enter the number of the item you want to program.

```
21-08-nn
nnnnn
← - + →
```

4. Enter data for the item you selected + HOLD.
5. Enter data for the next item in the program.
OR
Press MIC once to enter a new item number.
OR
Press MIC until you've exited that series's programming section.

Program 21 : Outgoing Call Setup

21-09 : Dial Block Setup

Level:

IN

Feature Availability

- Available.

Description

Use **Program 21-09 : Dial Block Setup** to define the Dial Blocking Toll Restriction Class and Dial Block Password to be used by the Supervisor extension.

Input Data

Item No.	Item	Input Data	Default
01	Toll Restriction Class With Dial Block Assign a Toll Restriction Class of Service when the Dial Block feature is used.	1-15	15
02	Supervisor Password Assign a 4-digit password to be used by the supervisor to enable or disable Dial Block for other extensions.	0-9, *, # (4-digit fixed)	No setting

Conditions

This function works by password and Class of Service control (the supervisor is not an assigned extension). If Dial Block is available for all Classes of Service, everyone may become a supervisor if they know the Dial Block password.

Feature Cross Reference

- Toll Restriction

Program 21 : Outgoing Call Setup

21-12 : ISDN Calling Party Number Setup for Trunks

Level:

IN

Feature Availability

- Available.

Description

Use **Program 21-12 : ISDN Calling Party Number Setup for Trunks** to assign Calling Party Numbers for each trunk (maximum 16 digits per entry). When a call is made by an extension which does not have an Extension Calling Number assigned (Program 21-13), the UX5000 sends the calling number for the ISDN trunk defined in 21-12.

Note: If the Calling Party Number is assigned in both Programs 21-12 and 21-13, the UX5000 sends the data in Program 21-13.

Input Data

Trunk Port Number	1-200
-------------------	-------

Item No.	Calling Party Number Data	Default
01	1-0, *, # (Max. 16 digits)	No setting

Conditions

None

Feature Cross Reference

OR
Press MIC until you've exited that series's programming section.

Program 21 : Outgoing Call Setup

21-21 : Toll Restriction Class for Trunks

Level:
IN

Feature Availability

- Available.

Description

Use **Program 21-21 : Toll Restriction Class for Trunks** to assign a Toll Restriction level to each trunk.

When both an extension (21-04-01) and a trunk (25-11-04 / 34-04-01) have a Toll Restriction level assigned, the higher class will apply for outgoing calls. For example:

- When a trunk is set to class 1 and an extension is class 02, Toll Restriction class 02 is applied to the outgoing call.
- When a trunk is set to class 15 and an extension is class 03, Toll Restriction class 15 is applied to the outgoing call.

This feature can be used for any type of extension (real or virtual) and using any type of terminal (keyset, SLT, etc.). When virtual extensions are to be used, Program 15-02-21 must be set to "1" to allow outgoing calls on a virtual/Call Coverage key.

The details of the trunk toll restriction are defined in Program 21-05 and 21-06.

Input Data

Trunk Port Number	001-200
Night Mode	1-9 Nine (Power failure mode at power failure mode)

Item	Description	Input Data	Default	Related Program
01	Toll Restriction Class For each trunk, assign a Toll Restriction Class (1-15) for each Day/Night Service mode. <i>When Program 14-01-08 is set to "0", the toll restriction class is not followed.</i>	01-15	1	14-01-08 21-05

Conditions

- For DISA and Tie Line Trunks are used, the restriction class for the incoming trunk is compared to the restriction class of the outgoing trunk.
When a trunk makes an outgoing call, the restriction class of the incoming trunk (Program 21-21-01) is compared to the restriction class of the outgoing trunk. The higher class will be used for outgoing calls.
DISA Trunk (22-02-01 is set to "2") - Program 25-11-01 is compared to 21-21-01.
Tie Line Trunk (22-02-01 is set to "5") - Program 34-04-01 is compared to 21-21-01.

21-21 : Toll Restriction Class for Trunks

- For Your Notes -

Program 22 : Incoming Call Setup

22-01 : System Options for Incoming Calls

Level:

IN

Feature Availability

- Available.

Description

Use **Program 22-01 : System Options for Incoming Calls** to define the UX5000 options for incoming calls.

Input Data

Item No.	Item	Input Data	Default	Description	Related Program
01	Incoming Call Priority	0 = Intercom Call Priority 1 = Trunk Call Priority	1	Use this option to determine if Intercom calls or trunk calls have answer priority when both are ringing simultaneously.	15-02-22
02	Incoming Call Ring No Answer Alarm	0 = Disable 1 = Enable	0	If enabled, an incoming call that rings longer than the Ring No Answer Alarm interval (22-01-03), will change to a unique ring cadence to indicate that the call has been ringing too long. If disabled, this will not occur.	22-01-03 22-01-04
03	Ring No Answer Alarm Time	0-64800 (Sec.)	60	If a trunk rings a key terminal longer than this interval, the UX5000 changes the ring cadence. This indicates to the user that the call has been ringing too long.	20-31-07 22-01-02
04	DIL No Answer Recall Time	0-64800 (Sec.)	0	A DIL that rings its programmed destination longer than this interval diverts to the DIL No Answer Ring Group (set in Program 22-08).	20-31-08
05	- Not Used -	-	-	-	
06	DID Ring-No-Answer Time	0-64800 (Sec.)	20	In UX5000s with DID Ring-No-Answer Intercept, this interval sets the Ring-No-Answer time. This interval is how long a DID call rings the destination extension before rerouting to the intercept ring group.	20-31-09 22-12
07	DID Incoming Ring Group no answer timer	0-64800 (Sec.)	20		
08	DID Pilot Call No answer timer	0-64800 (Sec.)	60		
09	DID to Trunk to Trunk no answer timer	0-64800 (Sec.)	20		

Program 22 : Incoming Call Setup

22-01 : System Options for Incoming Calls

Item No.	Item	Input Data	Default	Description	Related Program
10	VRS Waiting Message Operation	0=Automatic 1=Change by manual operation	0	This program sets up the operation mode for Auto Attendant and Queuing Message. If there is no response during the fixed time for a call, the waiting message is sent to the caller until a response is received.	15-07 20-15-11 22-01-04 22-04 22-08 22-14 22-15
11	VRS Waiting Message Interval Time	0-64800 (Sec.)	20	Setup the sending duration time of the Auto - Attendant & Queuing. The message is repeatedly sent out within the specified time. A ringback, internal tone or external holding tone is heard between the messages.	22-14-06 22-15-06 41-11-06

- Available.

Description

Use **Program 22-03 : Trunk Ring Tone Range** to select the ring tone range for the trunk. The trunk uses a ring tone within the range selected when it rings an extension. There are four ring tones available. Customize the Trunk Ring Tones in Program 82-01.

Input Data

Trunk Port Number	1-200
-------------------	-------

Item No.	Ring Tone Pattern	Default	Description	Related Program
01	0-8 (Ring Tone Pattern 1-4) (Melody 1 - Melody 5)	0	Use this program to select the ring tone range for the trunk. The trunk uses a ring tone within the range selected when it rings an extension. There are four ring tones available.	15-02 15-08 82-01

Incoming Signal Frequency Pattern	Type	Frequency 1	Frequency 2	Modulation
Pattern 1	High Middle Low	1100 660 520	1400 760 660	16Hz Modulation 16Hz Modulation 16Hz Modulation
Pattern 2	High Middle Low	1100 660 520	1400 760 660	8Hz Modulation 8Hz Modulation 8Hz Modulation
Pattern 3	High Middle Low	2000 1400 1100	760 660 540	16Hz Modulation 16Hz Modulation 16Hz Modulation
Pattern 4	High Middle Low	2000 1400 1100	760 660 540	8Hz Modulation 8Hz Modulation 8Hz Modulation

Conditions

None

Program 22 : Incoming Call Setup

22-03 : Trunk Ring Tone Range

Feature Cross Reference

- Selectable Ring Tones

Terminal Programming Instructions

To enter data for Program 22-03 (Trunk Ring Tone Range):

1. Enter the programming mode.
2. 22 03

```
22-03-01 Trunk1
TRK_Ring_Tone 0
back ↑ ↓ select
```

3. Enter the number of the item you want to program.

```
22-03-nn Trunknnn
nnnnn
← - + →
```

4. Enter the trunk number to be defined or press FLASH to use the displayed entry.
5. Enter data for the item you selected + HOLD.
6. Enter data for the next item in the program.
OR
Press MIC once to enter a new item number.
OR
Press MIC until you've exited that series's programming section.

Program 22 : Incoming Call Setup

22-04 : Incoming Extension Ring Group Assignment

Level:

SA

Feature Availability

- Available - 100 Ring Groups.

Description

Use **Program 22-04 : Incoming Extension Ring Group Assignment** to assign extensions to Ring Groups. Calls ring extensions according to Ring Group programming. Use Program 22-05 to assign trunks to Ring Groups and use Program 22-06 to set the ringing for the terminals. IRG can have up to 32 extension numbers assigned.

Input Data

Incoming Ring Group Number	1-100
----------------------------	-------

Item No.	Extension Number	Description	Related Program
01	Max. 8 digits	Use this program to assign extensions (up to 32) to Ring Groups. Calls ring extensions according to Ring Group programming.	22-02 22-05 22-06

Default

Extension 301rings for incoming Ring Group 1 calls. All other extensions do not ring for incoming Ring Group 1 calls.

Conditions

None

Feature Cross Reference

- Ring Groups

Program 22 : Incoming Call Setup

22-04 : Incoming Extension Ring Group Assignment

Terminal Programming Instructions

To enter data for Program 22-04 (Incoming Extension Ring Group Assignment):

1. Enter the programming mode.
2. 22 04

```
22-04-01  INC Group1
IRG 01=301
back ↑ ↓ select

Press MIC until you've exited that series's programming section.

Program 22 : Incoming Call Setup

22-07 : DIL Assignment

Level:

IN

Feature Availability

- Available.

Description

Use **Program 22-07 : DIL Assignment** to assign the destination extension or Department Calling Group pilot # (as assigned in Program 11-07) for each DIL Incoming trunk. A DIL rings an extension directly, without any other Access Map or Ring Group programming. If an extension has a line key, the DIL rings the line key. If the extension does not have a line key, the DIL rings loop keys (if programmed) or one of the CALL keys (CALL keys will always ring). Use Program 22-02 to designate a trunk as a DIL). You can make eight DIL assignments, one for each Night Service mode:

If trunks should be answered by the voice mail, enter the master/pilot number of the voice mail group defined in Program 11-07-01.

Input Data

Trunk Port Number	1-200
-------------------	-------

Item No.	Day/Night Mode	Number of Transferring Destination	Default
01	1-8	Extension number (Max. 8 digits) Pilot number	No setting

Conditions

Program 22-02 must be set to '4' for the trunk.

Feature Cross Reference

- Direct Inward Line (DIL)

Program 22 : Incoming Call Setup

22-07 : DIL Assignment

Terminal Programming Instructions

To enter data for Program 22-07 (DIL Assignment):

1. Enter the programming mode.
2. 22 07

```
22-07-01 Trunk1
Mode1 =
back ↑ ↓ select
```

3. Enter the number of the item you want to program.

```
22-07-nn Trunknnn
nnnnn
← - + →
```

4. Enter the trunk number to be defined or press FLASH to use the displayed entry.
5. Enter data for the item you selected + HOLD.
6. Enter data for the next item in the program.
OR
Press MIC once to enter a new item number.
OR
Press MIC until you've exited that series's programming section.

Program 22 : Incoming Call Setup

22-08 : DIL/IRG No Answer Destination

Level:

IN

Feature Availability

- Available.

Description

For DIL Delayed Ringing, use **Program 22-08 : DIL/IRG No Answer Destination** to assign the DIL No Answer Ring Group. An unanswered DIL rings this group after the DIL No Answer Time expires (Program 22-01-04). DIL Delayed Ringing can also reroute outside calls ringing a Ring Group.

You make eight assignments, one for each Night Service mode.

Input Data

Trunk Port Number	1-200
-------------------	-------

Item No.	Day/Night Mode	Incoming Group Number	Default
01	1-8	0 (No setting) 1-8 or 001-100 (Incoming Group) 102 (In-Skin/External Voice Mail) 103 (Centralized Voice Mail)	1

Conditions

None

Feature Cross Reference

- Direct Inward Line (DIL)

Program 22 : Incoming Call Setup

22-11 : DID Translation Number Conversion

Level:

SA

Feature Availability

- Available.

Description

Use **Program 22-11 : DID Translation Table Number Conversion** to specify for each Translation Table entry (2000):

- The digits received by the UX5000 (eight max.)
- The extension the UX5000 dials after translation (24 digits max.)
- The name that should show on the dialed extension's display when it rings (twelve characters max.)
- The Transfer Target-1 and 2
If the Transfer Targets are busy or receive no answer, those calls are transferred to the final transfer destination (Program 22-10).
- Operation mode

Use the following chart when entering and editing text for names. Press the key once for the first character, twice for the second character, etc. For example, to enter a C, press "2" three times.

Key for Entering Names	
When entering names in the procedures below, refer to this chart. Names can be up to 12 digits long.	
Use this keypad digit . . .	When you want to . . .
1	Enter characters: 1 @ [¥] ^ _ ` { } → ← Á À Â Ã Ä Ç È É Ê Ì Ó 0
2	Enter characters A-C, a-c, 2.
3	Enter characters D-F, d-f, 3.
4	Enter characters G-I, g-i, 4.
5	Enter characters J-L, j-l, 5.
6	Enter characters M-O, m-o, 6.
7	Enter characters P-S, p-s, 7.
8	Enter characters T-V, t-v, 8.
9	Enter characters W-Z, w-z, 9.
0	Enter characters: 0 ! “ # \$ % & ’ () ô o ú â ä ö ü α ε θ
*	Enter characters: * + , - . / : ; < = > ? π Σ σ Ω ∞ ϕ ε
#	# = Accepts an entry (only required if two letters on the same key are needed - ex: TOM). Pressing # again = Space. (In UX5000 programming mode, use the right arrow soft key instead to accept and/or add a space.)
CONF	Clear the character entry one character at a time.
CLEAR	Clear all the entries from the point of the flashing cursor and to the right.

Note: The item numbers indicated below are different when using PCPro/WebPro. Refer to the program within the PCPro/WebPro application to determine the correct item number.

Program 22 : Incoming Call Setup

22-11 : DID Translation Number Conversion

Input Data

Conversion Table Number	1-2000
-------------------------	--------

Item No.	Item	Input Data	Default
01	Received Number	Max. 8 digits	No setting
02	Target Number	Max. 24 digits	No setting
03	DID Name	Max. 12 characters	No setting

OR
Press MIC until you've exited that series's programming section.

Program 22 : Incoming Call Setup

22-12 : DID Intercept Ring Group

Level:
IN

Feature Availability

- Available.

Description

For each DID Translation Table, use **Program 22-12 : DID Intercept Ring Group** to define the first destination group for DID calls.

Depending on the entry in Program 22-09-02 and 22-11-04, the incoming calls will route to the first destination group by the following:

- Vacant number intercept (vacant number means that there is no terminal connected, no station card installed, or the extension number is not defined in Program 11-02)
- Busy intercept
- Ring-no-answer intercept

If the destination is '0', the calls will be forwarded to the trunk ring group defined in Program 22-11 based on the table assigned to the DID trunk.

Note: If Program 22-11-05 and 22-11-06 are set, the priority of transferring will be in this order: Program 22-11-05 ➡ Program 22-11-06 ➡ Program 22-12.

For busy and no-answer calls, if the first and third destinations are programmed but the second destination is not, the incoming call goes to the third destination after the first destination. If the first and second destinations are not defined, but the third destination is, the call goes directly to the third destination (as defined in Program 22-12).

Input Data

Conversion Table Area Number	01-20
------------------------------	-------

Item No.	Day/Night Mode	Incoming Group Number	Default

Program 23 : Answer Features Setup

23-03 : Universal Answer/Auto Answer

Level:

IN

Feature Availability

- Available.

Description

Use **Program 23-03 : Universal Answer/Auto Answer** to assign trunk routes (set in Program 14-06) to extensions for Universal Answer. If the call ringing the paging system is in an extension's assigned route, the user can dial the Universal Answer code (843) to pick up the call.

You can also use this program to let an extension user automatically answer trunk calls that ring other extensions (not their own). When the user lifts the handset, they automatically answer the ringing calls based on Trunk Group Routing programming (defined in Program 14-06). The extension user's own ringing calls, however, always have priority over calls ringing other co-worker's extensions. Refer to the Line Preference feature for more information.

You make one entry for each Night Service mode.

Input Data

Extension Number	Max. 8 digits
------------------	---------------

Item No.	Day/Night Mode	Route Table Number	Default	Description	Related Program
01	1-8	0-100	0	Use this program to let an extension user automatically answer trunk calls that ring other extensions. When the user lifts the handset, they automatically answer the ringing calls based on Trunk Group Routing programming (defined in Program 14-06).	14-06

Program 24 : Hold/Transfer Setup

24-01 : System Options for Hold

Level:

IN

Feature Availability

- Available.

Description

Use **Program 24-01 : System Options for Hold** to define the UX5000 options for the Hold feature.

Input Data

Item No.	Item	Input Data	Default	Related Program
01	Hold Recall Time A call on Hold recalls the extension that placed it on Hold after this interval. This timer works with the Hold Recall Callback Timer (Item 2).	0-64800 (Sec.)	90	20-31-10
02	Hold Recall Callback Time A trunk recalling from Hold or Park rings an extension for this interval. This timer works with timer 01 (Hold Recall Time) or timer 06 and 07 (Park Recall Time). After this interval, the UX5000 invokes the Hold recall time again. Cycling between timer 01 and 02 and 06 and 07 continues until a user answers the call.	0-64800 (Sec.)	30	20-31-11
03	Exclusive Hold Recall Time A call left on Exclusive Hold recalls the extension that placed it on Hold after this interval.	0-64800 (Sec.)	90	20-31-12
04	Exclusive Hold Recall Callback Time An Exclusive Hold Recall rings an extension for this interval. If not picked up, the call goes back on System Hold.	0-64800 (Sec.)	30	20-31-13
05	Forced Release of Held Call Depending on the setting of Program 14-01-16, the UX5000 disconnects calls on Hold longer than this interval.	0-64800 (Sec.)	1800	14-01-16
06	Park Hold Time - Normal A call left parked longer than this interval recalls the extension that initially parked it.	0-64800 (Sec.)	90	20-11-19 20-31-14
07	Park Hold Time - Extended A call left parked longer than this interval recalls the extension that initially parked it.	0-64800 (Sec.)	300	20-11-19

Program 24 : Hold/Transfer Setup

24-02 : System Options for Transfer

Level:

IN

Feature Availability

- Available.

Description

Use **Program 24-02 : System Options for Transfer** to define the UX5000 options for Transfer feature.

Input Data

Item No.	Item	Input Data	Default	Related Program
01	Busy Transfer Use this option to prevent or allow extensions to Transfer calls to busy extensions.	0 = Disable 1 = Enable	1	
02	MOH or Ringback on Transferred Calls Use this option to enable or disable MOH on Transfer. If enabled (0), a transferred caller hears MOH while their call rings the destination extension. If disabled (1), a transferred caller hears ringback while their call rings the destination extension.	0 = Hold Tone 1 = Ring Back Tone	0	20-03-02
03	Delayed Call Forwarding Time If activated at an extension, Delayed Call Forwarding occurs after this interval. This also sets how long a Transferred call waits at an extension forwarded to Voice Mail before routing to the called extension's mailbox.	0-64800 (Seconds)	10	20-31-15
04	Transfer Recall Time An unanswered transferred call recalls to the extension that initially transferred it after this interval.	0-64800 (Seconds)	30	20-31-16
05	Transfer to Busy Department Group Recall Timer After a trunk is unscreen transferred to a busy Department Group, this timer will start. If the call is not answered, it will recall the originator.	0-64800 (Seconds)	30	
07	Forced Release for Trunk-to-Trunk Transfer This timer will start when a trunk begins talking with another trunk (for example: trunk-to-trunk transfer, outgoing from trunk, Tandem Trunking). When this timer expires, a warning tone is heard. If Program 24-02-10 is set, the conversation disconnects after that timer expires. This timer is set again when the external digit timer expires. One of the trunks used must be an analog trunk (or leased line)	0-64800 (Seconds) (0=disabled)	1800	14-01-25 20-28-01 20-28-02 20-28-03 24-02-10
08	Delayed Transfer Timer for All Department Groups This timer determines how long a call will ring the Department Groups before transferring a call.	0-64800 (Seconds)	10	11-11-28 11-11-29 15-07-01, Key 59

Program 24 : Hold/Transfer Setup

24-02 : System Options for Transfer

09	ISDN Transfer Resend Timer Determine how long the UX5000 should resend a Facility Message to the currently active PRI trunk when the 2 B-Channel Transfer feature is used. The UX5000 will resend the Facility timer based on this timer. If there is no response after the 3rd resend, the UX5000 considers the transfer as failed and stops resending.	1-30 seconds	10	10-03-16 (PRI)
10	Trunk-to-Trunk Transfer Disconnect Timer Determine how long a conversation will continue once the timer in Program 24-02-07 expires. If this option is set to "0", the conversation will be disconnected immediately. This program has no affect if Program 24-02-07 is set to "0". One of the trunks used must be an analog trunk (or leased line).	0 - 64800 seconds	0	14-01-25 20-28-01 20-28-02 20-28-03 24-02-07
11	No Answer Timer for Step Transfer Define the length of time the UX5000 will wait before Step Transferring a no-answer call to the next destination.	0 - 64800 seconds	10	14-01-26 24-04-01
12	No Answer Timer for Automatic Trunk-to-Trunk Transfer Define the length of time the UX5000 will wait before Automatic Trunk-to-Trunk Transfer occurs for a no-answer call.	0 - 64800 seconds	0	14-01-26 24-04-01

Terminal Programming Instructions

To enter data for Program 24-07 (Fixed Call Forwarding Off-Premise):

1. Enter the programming mode.
2. 24 07

```
24-07-01 TEL301
Dial =
back ↑ ↓ select
```

3. Enter the number of the item you want to program.

```
24-07-nn TELnnn
nnnnn
← - + →
```

4. Enter the terminal number to be defined or press FLASH to use the displayed entry.
5. Enter data for the item you selected + HOLD.
6. Enter data for the next item in the program.
OR
Press MIC once to enter a new item number.
OR
Press MIC until you've exited that series's programming section.

Program 24 : Hold/Transfer Setup

24-08 : Call Forwarding with Centrex

Level:

IN

Feature Availability

- Available.

Description

Use **Program 24-08 : Call Forwarding with Centrex** to set the options for the feature.

Input Data

Extension Number	Max. 8 digits
------------------	---------------

Item No.	Off-Premise Destination Number	Input Data	Default
01	Forwarding Type Use this program to define the type of Call Forwarding for Centrex for each extension required.	0 = Call Forward off 1 = Call Forward No Answer 2 = Call Forward Immediate 3 = Call Forward Busy / No Answer 4 = Call Forward Busy	0
02	Immediate/No Answer Destination When Call Forward Immediate or No Answer is set, this program is used to store the destination number using the Centrex line. This program can also be used to set a Call Forward destination using a Centrex line for virtual extensions. A number can be entered in programming or a user can use the service code in Program 11-11-61 to enter a destination number.	1-9, 0, *, #, Pause (Press line key 1), Recall/Flash (Press line key 2), @ (Press line key 3) (max. 24 digits)	No Setting
03	Busy Destination When Call Forward Busy is set, this program is used to store the destination number using the Centrex line. This program can also be used to set a Call Forward destination using a Centrex line for virtual extensions. To set Call Forwarding with Centrex, a number can be entered in programming or, for non-virtual extensions, a user can set up forwarding using the service code in Program 11-11-61.	1-9, 0, *, #, Pause (Press line key 1), Recall/Flash (Press line key 2), @ (Press line key 3) (max. 24 digits)	No Setting

Conditions

None

Feature Cross Reference

- Call Forwarding, Centrex

Press MIC until you've exited that series's programming section.

Program 25 : VRS/DISA Setup

25-05 : VRS/DISA Error Message Assignment

Level:

IN

Feature Availability

- Available.

Description

Use **Program 25-05 : VRS/DISA Error Message Assignment** to assign the VRS message number to be used as the Automated Attendant error message. For each VRS/DISA trunk that the VRS will answer, enter the VRS message (1-100) the outside caller hears if they dial incorrectly. If you enter 0 (i.e., no error message), the call reroutes according to Program 25-03 and 25-04.

For each trunk, you make a separate entry for each Night Service mode.

Input Data

Trunk Port Number	1-200
-------------------	-------

Item No.	Day/Night Mode	VRS Message Number	Default
01	1-8	0-100 (0 = no setting)	0

Conditions

None

Feature Cross Reference

- Direct Inward System Access (DISA)

Program 25 : VRS/DISA Setup

25-05 : VRS/DISA Error Message Assignment

```

4. Enter the trunk port number to be defined or press FLASH to use the displayed entry.
5. Enter data for the item you selected + HOLD.
6. Enter data for the next item in the program.
OR
Press MIC once to enter a new item number.
OR
Press MIC until you've exited that series's programming section.

Program 25 : VRS/DISA Setup

25-06 : VRS/DISA One-Digit Code Attendant Setup

Level:	Feature Availability
IN	<ul style="list-style-type: none"> Available.

Description

Use **Program 25-06 : VRS/DISA One-Digit Code Attendant Setup** to set up single digit dialing through the VRS. This gives VRS callers single key access to extensions, the company operator, Department Calling Groups and Voice Mail. For each VRS message set to answer outside calls (see Program 25-04 and 25-05), you specify:

- The digit the VRS caller dials (0-9, *, #). (Keep in mind that if you assign destinations to digits 1-7, outside callers may not be able to dial extensions.
- The destination reached (eight digits max.) when the caller dials the specified digit.

The destination can be an extension, a Department Calling pilot number or the Voice Mail master number. A one-digit code can be assigned for each Automated Attendant message.

Example:

Message Number=01, Destination=2, Next Message Number=0, Dial=399

In this example, when “2” is dialed by an outside caller, the UX5000 transfers the call to “399”. This means that ext 200-299 cannot receive calls from VRS/DISA users during/after VRS Message 01.

Input Data

Attendant message number	01-100
--------------------------	--------

Received dial	1-9,0,*,#
---------------	-----------

Item No.	Item	Input Data	Default
01	<p>Next Attendant Message Number A message number does not have to be entered - you can just define a destination number to ring.</p> <p>With the VRS Call Attendant feature, this option is enhanced to add additional destinations. <i>Entries 101, 104, and 105 can only be used with the Call Attendant feature.</i> These options should be entered as the "MSG" number and no "Destination" entry is required.</p>	<p>0-100 (0 = no setting)</p> <ul style="list-style-type: none"> - 101 = Voice Mail - 104 = Transfer to Ring Group (destination defined in Program 25-04-01) - 105 = Dial Another Extension 	0
02	Destination Number	Up to 8 digits	No setting

Program 25 : VRS/DISA Setup

25-06 : VRS/DISA One-Digit Code Attendant Setup

Conditions

Outside caller may not be able to dial individual extensions or lines if the same first digit is defined here.

Feature Cross Reference

- Direct Inward System Access (DISA)
- Voice Response System (VRS)

Terminal Programming Instructions

To enter data for Program 25-06 (VRS/DISA One-Digit Code Attendant Setup):

1. Enter the programming mode.
2. 25 06

```
25-06-01  Guidance1
Rcv'd 1   MSG 1
back  ↑   ↓  select
```

3. Enter the number of the item you want to program.

```
25-06-nn  Guidancenn
nnnnnn
←   -   +   →
```

4. Enter the Guidance/Attendant number to be defined or press FLASH to use the displayed entry.
5. Enter data for the item you selected + HOLD.
6. Enter data for the next item in the program.
OR
Press MIC once to enter a new item number.
OR
Press MIC until you've exited that series's programming section.

Program 25 : VRS/DISA Setup

25-07 : System Timers for VRS/DISA

Level:

IN

Feature Availability

- Available.

Description

Use **Program 25-07 : System Timers for VRS/DISA** to set the value for the UX5000 timers which affect VRS, DID and DISA. Refer to the following chart for a description of each option, its range and default setting.

Input Data

Item No.	Item	Input Data	Default	Related Program
01	<p>DISA Dial Tone Time After answering a DISA trunk, the UX5000 waits this interval for the caller to dial the first digit of the DISA password. If the caller fails to dial within this interval, the call follows the programmed Ring No Answer routing (set in Program 25-04).</p>	0-64800 seconds	10	25-04
02	<p>VRS/DISA No Answer Time A VRS/DISA caller can ring an extension for this interval before the UX5000 sets the call as a Ring No Answer. After this interval expires, the call follows the programmed Ring No Answer routing (set in Program 25-03 and 25-04).</p>	0-64800 seconds	30	20-31-17 25-04
03	Disconnect after VRS/DISA re-transfer to IRG	0-64800 seconds	60	20-31-18
04	<p>Calling Time to Automatic Answering Terminal Set the answering waiting time of the automatic answering extension when an incoming DID trunk call is received.</p>	0-64800 seconds	10	
05	<p>Duration Time for Guidance Message by Automatic Answering Terminal Set the announcement time of the automatic answering extension after which in incoming DID trunk caller is disconnected.</p>	0-64800 seconds	10	
06	<p>Duration Time for Guidance Message by ACI Set the announcement time by the ACI after which an incoming DID trunk caller is disconnected.</p>	0-64800 seconds	10	
07	<p>Long Conversation Warning Tone Time Determine the length of time a DISA caller or any trunk-to-trunk (such as Tandem Trunking) conversation can talk before the Long Conversation tone is heard.</p> <p>With software 4.0E+, if Program 25-07-08 is set to "0", the call is disconnected once the timer expires. This timer is set again when the external digit timer expires. Note: If this option is set to "0", the settings in Program 24-02-07 and 24-07-10 are followed - not 25-07-07 and 25-07-08.</p>	0-64800 seconds	180	14-01-25 20-28-01 20-28-02 20-28-03 20-31-19 24-02-07 24-07-10 25-07-08

Program 25 : VRS/DISA Setup

25-07 : System Timers for VRS/DISA

Item No.	Item	Input Data	Default	Related Program
08	<p>Long Conversation Disconnect This timer determines how long the UX5000 will wait before disconnecting a DISA caller or any trunk-to-trunk (such as Tandem Trunking) conversation call after the Long Conversation tone is heard.</p> <p>This program has no affect if Program 25-07-07 is set to "0".</p>	0-64800 seconds	10	14-01-25 20-28-01 20-28-02 20-28-03 20-31-20 25-07-07
09	<p>DISA Internal Paging Time This is the maximum length of an Internal Page placed by a DISA caller. If the Page continues longer than this interval, the UX5000 terminates the DISA call.</p>	0-64800 seconds	30	20-31-21
10	<p>DISA External Paging Time This is the maximum length of an External Page placed by a DISA caller. If the Page continues longer than this interval, the UX5000 terminates the DISA call.</p>	0-64800 seconds	30	20-31-22
11	<p>VRS/DISA Answer Delay Timer Set up the interval time the UX5000 will wait after receiving an incoming VRS/DISA call until the UX5000 will automatically answer the call.</p>	0-64800 seconds	0	
13	<p>VRS/DISA Busy Tone Interval If a DISA caller dials a busy extension (and Program 25-04 = 0), the UX5000 plays busy tone for this interval before disconnecting.</p>	0-64800 seconds	5	
14	<p>Delayed DID Answer Timer Assign the delay time from switching from a normal incoming status to DID mode. If this time is set to '0', the call will switch to DID mode immediately.</p>	0-64800 seconds	10	

Conditions

None

Program 25 : VRS/DISA Setup

25-09 : Class of Service for DISA Users

Level:

IN

Feature Availability

- Available.

Description

Use **Program 25-09 : Class of Service for DISA Users** to set the DISA Class of Service for each user. When a DISA caller enters a password (defined in Program 25-08), the UX5000 identifies the user and associates the appropriate DISA Class of Service with the call. Assign the DISA Class of Service options in Program 20-14. When programming DISA Class of Service, you make one entry for each Night Service mode.

Input Data

DISA User Number	1-15
------------------	------

Item No.	Day/Night Mode	Function Class	Default
01	1-8	1-15	1

Conditions

- The DISA Class of Service cannot be 0.
- You cannot use Program 20-06 to assign Class of Service to DISA trunks.

Feature Cross Reference

- Direct Inward System Access (DISA)

Program 25 : VRS/DISA Setup

25-09 : Class of Service for DISA Users

Terminal Programming Instructions

To enter data for Program 25-09 (Class of Service for DISA Users):

1. Enter the programming mode.
2. 25 09

```
25-09-01  DISA User1

Program 25 : VRS/DISA Setup

25-10 : Trunk Group Routing for DISA

Level:

IN

Feature Availability

- Available.

Description

Use **Program 25-10 : Trunk Group Routing for DISA** to assign the Trunk Group route chosen when a user places a DISA call into the UX5000 and dials 9. Set Trunk Group Routing in Program 14-06. Enable or disable the DISA caller's ability to dial 9 in Program 20-14-02. You assign a route to each DISA Class of Service (1-15). The UX5000 assigns a DISA Class of Service to a call based on the password the DISA caller dials.

When programming, you make a separate entry for each Night Service Mode.

Input Data

DISA User Number	1-15
------------------	------

Item No.	Day/Night Mode	Route Table Number	Default
01	1-8	0-100 (0 = no setting)	1

Conditions

None

Feature Cross Reference

- Direct Inward System Access (DISA)

Program 25 : VRS/DISA Setup

25-10 : Trunk Group Routing for DISA

Terminal Programming Instructions

To enter data for Program 25-10 (Trunk Group Routing for DISA):

1. Enter the programming mode.
2. 25 10

```
25-10-01  DISA User1
Mode1    DISA_Route No.1
back  ↑      ↓      select
```

Program 25 : VRS/DISA Setup

25-11 : DISA Toll Restriction Class

Level:

IN

Feature Availability

- Available.

Description

For UX5000s that use Toll Restriction, use **Program 25-11 : DISA Toll Restriction Class** to assign a Toll Restriction Class (1-15) to each DISA user (1-15). The UX5000 uses the Toll Restriction Class you enter in Program 21-05 and 21-06. The Toll Restriction Class assigned to a DISA call is based on the DISA Class of Service and user, which is determined by the password the caller dials.

When programming, you make a separate entry for each Night Service mode.

Input Data

DISA User Number	1-15
------------------	------

Item No.	Day/Night Mode	Toll Restriction Class	Default
01	1-8	1-15	2

Conditions

You cannot use Program 21-05 to assign Toll Restriction to DISA trunks.

Feature Cross Reference

- Direct Inward System Access (DISA)
- Toll Restriction

Program 25 : VRS/DISA Setup

- Available.

Description

Use **Program 25-12 : Alternate Trunk Group Routing for DISA** to define the trunk route selected when a DISA caller dials the Alternate Trunk Access Code. The route selected is based on the DISA caller's Class of Service, which is in turn determined by the password the caller dials. When programming, you make a separate entry for each Night Service Mode.

Use Program 11-09-02 to set the Alternate Trunk Access Code. Use Program 14-06 to set trunk routes.

Input Data

DISA User Number	1-15
------------------	------

Item No.	Day/Night Mode	Route Table Number	Default
01	1-8	0-100 (0 = no setting)	1

Conditions

You cannot use Program 21-15 to assign alternate trunk routing to DISA trunks.

Feature Cross Reference

- Direct Inward System Access (DISA)
- Trunk Group Routing

Program 25 : VRS/DISA Setup

25-12 : Alternate Trunk Group Routing for DISA

Terminal Programming Instructions

To enter data for Program 25-12 (Individual Trunk Group Routing for DISA):

1. Enter the programming mode.
2. 25 12

```
25-12-01  DISA User1
Mode1 DISA_Route_No.1
back  ↑      ↓      select
```

3. Enter the number of the item you want to program.

```
25-12-nn  DISA Usernn
nnnnn
←      -      +      →
```

4. Enter the DISA user number to be defined or press FLASH to use the displayed entry.
5. Enter data for the item you selected + HOLD.
6. Enter data for the next item in the program.
OR
Press MIC once to enter a new item number.
OR
Press MIC until you've exited that series's programming section.

Program 25 : VRS/DISA Setup

25-13 : System Option for DISA

Level:

IN

Feature Availability

- Available.

Description

Use **Program 25-13 : System Option for DISA** to enter the password DISA callers must dial before the UX5000 will allow them to record, listen to and or erase the VRS messages. This program also is used to define additional DISA call options.

Input Data

Item No.	Item	Input Data	Default
01	VRS Password Enter the password DISA callers must dial before the UX5000 will allow them to record, listen to and or erase the VAU messages.	1-9, 0, *, # 6 digits fixed	No setting

Conditions

None

Feature Cross Reference

- Direct Inward System Access (DISA)
- Voice Response System (VRS)

Program 25 : VRS/DISA Setup

25-13 : System Option for DISA

Terminal Programming Instructions

To enter data for Program 25-13 (System Option for DISA):

1. Enter the programming mode.
2. 25 13

```
25-13-01
VRS_MSG_Access_ID
back  ↑   ↓  select
```

3. Enter the number of the item you want to program.

```
25-13-nn
nnnnn
←           →
```

4. Enter data for the item you selected + HOLD.
5. Enter data for the next item in the program.
OR
Press MIC once to enter a new item number.
OR
Press MIC until you've exited that series's programming section.

Program 26 : ARS Service

26-01 : Automatic Route Selection Service

Level:

IN

Feature Availability

- Available.

Description

Use **Program 26-01 : Automatic Route Selection Service** to define the UX5000 options for Automatic Route Selection (ARS).

Input Data

Item No.	Item	Input Data	Default	Related Programs
01	ARS Service Enable or disable ARS.	0 = Disable 1 = Enable	0	26-02 26-03 26-04
02	Network Outgoing Inter-Digit ARS Timer With CygniLink, this timer replaces 20-03-04 when determining if all network protocol digits have been received. If ARS is enabled at Site B, this timer can be programmed for 5 (500 msec) at Site A. If ARS is disabled and Site B is using F-Route for outbound dialing, this timer should be programmed for 30 (3 seconds) at Site A.	0-64800 (msec.)	30	20-03-04
03	ARS Misdialed Number Handling If a user dials a number not programmed in ARS Dial Analysis Table (Program 26-02), this option determines if the UX5000 should route over trunk group 1 or play error tone.	0 = Route to Trunk Group 1 1 = Play Warning Tone to Dialer	0	21-02 26-02
04	LCR Mode - Not Used in the U.S.		0	
05	- Not Used -			
06	ARS COS Match Access With the ARS Class of Service Match Access feature, you can determine whether the UX5000 should allow a call based on the COS assigned to the Dial Analysis Table (Program 26-02). This change can be used to create a tenant-like application. It will then use the trunk group defined in the Additional Entry in Program 26-02-03 to place the outgoing call. When this feature is enabled, the calls will be routed in sequential order, and will forward provided the Class of Service for the trunk groups match.	0 = Disabled (COS not compared) 1 = Enabled (COS Match Access)	0	26-02

Program 26 : ARS Service

26-01 : Automatic Route Selection Service

Conditions

None

Feature Cross Reference

Program 26 : ARS Service

26-02 : Dial Analysis Table for ARS/LCR

Level:
IN

Feature Availability

- Available.

Description

Use **Program 26-02 : Dial Analysis Table for ARS/LCR** to set pre-transaction tables for selecting Automatic Route Selection (ARS).

- Service Type 1 (Route to Trunk Group Number) - The number routes to a trunk group.
- Service Type 2 (F-Route Selected) - The number is controlled by the F-Route table.

Input Data

Dial Analysis Table Number	1-400
----------------------------	-------

Item No.	Item	Input Data	Default	Related PRG
01	Dial	Dial Digits (16 digits maximum) 1-9, 0, *, #, or @ for wild character (Press line key 1)	No Setting	
02	Service Type	0 = No ARS 1 = Route to Trunk Group 2 = Select F-Route Access	0	
03	Additional Data / Service Number	In Service Type 1: Select Trunk Group Number (0-100, 0=no route) In Service Type 2: F-Route Time Schedule Not Used = 0-500 (F-Route Table Number). Refer to Program 44-05. F-Route Time Schedule Used = 0-500 (F-Route Selection Number). Refer to Program 44-04.	0	44-04 44-05
04	ARS Class of Service	0-16	10	
05	Dial Treatment	0-15	0	
06	LCR Carrier Table Select the Carrier Table to be used for dial edit. Table 1 is a special table - this table will be automatically used for all numbers that begin with "0" and which do not correspond with the entry in Program 26-02-01.	0-25	0	

Program 26 : ARS Service

26-02 : Dial Analysis Table for ARS/LCR

Conditions

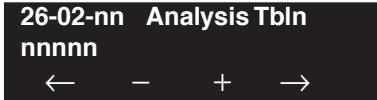

None

Feature Cross Reference

- Automatic Route Selection

Terminal Programming Instructions

To enter data for Program 26-02 (Dial Analysis Table for ARS/LCR):

1. Enter the programming mode.
2. 26 02

3. Enter the number of the item you want to program.

4. Enter data for the item you selected + HOLD.
5. Enter data for the next item in the program.

Press MIC once to enter a new item number.
OR
Press MIC until you've exited that series's programming section.

Program 26 : ARS Service

26-03 : ARS Dial Treatments

Level:

IN

Feature Availability

- Available.

Description

Use **Program 26-03 : ARS Dial Treatments** to assign the 15 Dial Treatments for automatic ARS dialing translation. Assign Dial Treatments to Service Numbers (Trunk Groups) in Program 26-02. The ARS Dial Treatment options are:

- **3** - Delete the NPA if dialed as part of the initial call.
Requires at least 8 digits in the ARS table (Program 26-02-01).
- **2** - Delete the leading “1” if dialed as part of the initial call.
Requires at least 8 digits in the ARS table (Program 26-02-01).
- **1** - Add a leading 1 if not dialed as part of the initial call.
Requires at least 8 digits in the ARS table (Program 26-02-01).
- **INPA** - Insert the NPA specified by NPA.
- **DNN** - Outdial the NN number of digits or execute the code that follows. For example, D041234 out-dials 1234. Valid entries are 0-9, #, *, Wnn (wait nn seconds) and P (pause). Each digit code counts as a digit. So for example, if a P was added for a pause, the entry would look like: D05P1234. This Dial Treatment can only be added from terminal programming.
- **Wnn** - Wait nn seconds.
- **P** - Pause in analog trunk.
- **R** - Redial the initially dialed number, including any modifications
- **E** - End of Dial Treatment. All Dial Treatments must end with the E code.
- **X** - When ARS is enabled, X must be entered in the Dial Treatment in order for the UX5000 to output the extension number of the call’s originator to the black box for the E911 feature.
- **An** - For Alternate Carrier Access (n = 1 ~ 4). The numeric digit instructs the UX5000 to insert a Transit Network Selection information element in the SETUP message and also identifies which code in Program 26-11 will be included in the information element. This function is valid only for outbound calls by ISDN trunks.

Input Data

Dial Treatment Table Number	1-15
-----------------------------	------

Item No.	Input Data	Default
01	24 characters maximum	No Setting

Conditions

None

Program 30 : DSS/DLS Console Setup

30-01 : DSS Console Operating Mode

Level:

IN

Feature Availability

- Available.

Description

Use **Program 30-01 : DSS Console Operating Mode** to set the mode of the UX5000's DSS Consoles. The entry you make in this option applies to all the UX5000's DSS Consoles. The available options are:

- Regular (Business) Mode (0)
This option indicates the status of normal keysets (not ACD agents).
- Hotel Mode (1)
- ACD Monitor Mode (2)
This option indicates the status of ACD agents (non-ACD agents are not included).
- Business/ACD Monitor Mode (3)
This option allows a non-ACD DSS console to lamp indicating the status of both non-ACD agents as well as ACD agents.

Input Data

DSS Console Number	01-32
--------------------	-------

Item No.	DSS Operation Mode	Default
01	0 = Business mode 1 = Hotel mode 2 = ACD monitor mode 3 = Business/ACD mode	0

The UX5000 60-Button DSS Console keys are defined as follows, by default, based on the operation mode selected in Program 30-01-01.

Operation Mode (Program 30-01)	Key Number	Function Indication	LED
Business Mode	1-60	ICM	Red
Hotel Motel	1-60	ICM	Red
ACD Mode	1-60	ACD Status	Red
Business/ACD Mode	1-60	ACD Status / ICM	Red

Conditions

None

Program 30 : DSS/DLS Console Setup

Program 30 : DSS/DLS Console Setup

30-02 : DSS Console Extension Assignment

Level:

IN

Feature Availability

- Available.

Description

Use **Program 30-02 : DSS Console Extension Assignment** to identify which extensions have DSS Consoles connected.

- You can have up to 32 different extensions with DSS Consoles. A single extension can have any number of 60-Button DSS Consoles (32 is the maximum allowed per system). Aspire 110-Button DSS Consoles can also be used staying within this system maximum.

When programming, each extension/DSS Console(s) combination is called a Console Number. There are 32 Console Numbers (1-32). You assign Console Numbers to extensions. When entering data, you normally make the assignment for Console Number 1 first.

Input Data

60-Button DSS Console Number or Aspire 110-Button DSS Console Number	01-32
---	-------

Item No.	Description	Default
01	The extension number for Key Terminal connected with the DSS console (Up to 8 digits)	No setting

Conditions

None

Feature Cross Reference

- Direct Station Selection (DSS) Console

Program 30 : DSS/DLS Console Setup

30-02 : DSS Console Extension Assignment

Terminal Programming Instructions

To enter data for Program 30-02 (DSS Console Extension Assignment):

1. Enter the programming mode.
2. 30 02

```
30-02-01  DSS1
Ext.Number
back  ↑    ↓  select
```

3. Enter the number of the item you want to program.

```
30-02-nn  DSSnn
nnnnn
←    -    +    →
```

4. Enter the DSS number to be defined or press FLASH to use the displayed entry.
5. Enter data for the item you selected + HOLD.
6. Enter data for the next item in the program.
OR
Press MIC once to enter a new item number.
OR
Press MIC until you've exited that series's programming section.

Program 30 : DSS/DLS Console Setup

30-03 : DSS Console Key Assignment

Level:
SA

Feature Availability

- Available.

Description

Use **Program 30-03 : DSS Console Key Assignments** to customize the key assignments for 60-Button DSS Consoles. This program is also used to define Aspire 110-Button DSS Consoles if used on the UX5000. The DSS Console keys can be programmed using any of the function codes listed below. In addition, the key (when defined as a DSS/One-Touch key [code 01] can have any function up to four digits long (e.g., extension number or Service Code). The function information (such as extension number or Service Code) would then be entered as the additional data.

To prevent lamping problems when reassigning DSS Console keys, it is recommended that you clear an extension's programmed key before reassigning it (Enter key to be cleared + 00 or *00 [If using Web or PC Programming, delete the key assignments and upload the change to the UX5000 before proceeding]). Without clearing an extension's key first, your DSS Console may not show the correct lamping, although the DSS function will work correctly.

If you are programming the UX5000 from the extension to which the DSS Console is connected, either by terminal or using the Web or PC Program, you may need to unplug the DSS and plug it back in to reset the console's lamping.

Input Data

30-10 : DSS Console IP Terminal Setup

- For Your Notes -

Program 31 : Paging Setup

31-01 : System Options for Internal/External Paging

Level:

IN

Feature Availability

- Available.

Description

Use **Program 31-01 : System Options for Internal/External Paging** to define the UX5000 options for Internal/External Paging.

The UX5000 shows the names you program on the terminal displays. Use the following chart when entering and editing text. When using the keypad digits, press the key once for the first character, twice for the second character, etc. For example, to enter a C, press key “2” three times. Press the key six times display the lower case letter.

Key for Entering Names	
When entering names in the procedures below, refer to this chart. Names can be up to 12 digits long.	
Use this keypad digit . . .	When you want to . . .
1	Enter characters: 1 @ [¥] ^ _ ` { } → ← Á À Â Ã Ä Ç È É Ê Ì Í Æ Ò
2	Enter characters A-C, a-c, 2.
3	Enter characters D-F, d-f, 3.
4	Enter characters G-I, g-i, 4.
5	Enter characters J-L, j-l, 5.
6	Enter characters M-O, m-o, 6.
7	Enter characters P-S, p-s, 7.
8	Enter characters T-V, t-v, 8.
9	Enter characters W-Z, w-z, 9.
0	Enter characters: 0 ! “ # \$ % & ’ () ô o ú å ä ö ü α ε θ
*	Enter characters: * + , - . / : ; < = > ? π Σ σ Ω ∞ ϕ £
#	# = Accepts an entry (only required if two letters on the same key are needed - ex: TOM). Pressing # again = Space. (In UX5000 programming mode, use the right arrow soft key instead to accept and/or add a space.)
CONF	Clear the character entry one character at a time.
CLEAR	Clear all the entries from the point of the flashing cursor and to the right.

Program 31 : Paging Setup

31-01 : System Options for Internal/External Paging

Input Data

Item No.	Item	Input Data	Default	Description	Related Program
01	All Call Paging Zone Name	Up to 12 Characters	Group all	Assign a name to each All Call Internal Paging zone. The name shows on the display of the terminal making the announcement.	11-12-19 31-02-02
02	Page Announcement Duration	0-64800 (Sec.)	1200	This timer sets the maximum length of Page announcements.	20-31-23
04	Privacy Release Time	0-64800 (Sec.)	90	Once the user initiates a Meet Me Conference or Voice Call Conference, the UX5000 waits this interval for the Paged party to join the call.

Program 31 : Paging Setup

31-02 : Internal Paging Group Assignment

Level:

IN

Feature Availability

- Available.

Description

Use **Program 31-02 : Internal Paging Group Assignment** to assign extensions to Internal Paging Groups (i.e., Page Zones). The setting in this program also determines if the Internal Page Group can receive Internal All Call Paging. The UX5000 can have up to 64 paging groups. An extension can be in only one Internal Paging Group.

Input Data

Extension Number	Max. 8 digits
------------------	---------------

Item No.	Item	Input Data	Default
01	Internal Paging Group Number Assign extensions to Internal Paging Groups (i.e., Page Zones). The UX5000 allows up to 64 Internal Paging Groups. An extension can be in only one Internal Paging Group.	0-64 (0 = no setting)	Extension 301-316 = Group 1 All Remaining Extensions = 0
02	Internal All Call Paging Receiving Allow or prevent All Call Internal Paging for each extension. If allowed, extension can place and receive All Call Internal Paging announcements. If prevented, extensions can only make (not receive) All Call Internal Paging announcements. If Combined Paging zones should be restricted as well, change the internal page zone group in Program 31-07-01 to "0".	0 = off 1 = on	0

Program 31 : Paging Setup

31-04 : External Paging Zone Group

Level:
IN

Feature Availability	
<ul style="list-style-type: none"> Available. 	

Description

Use **Program 31-04 : External Paging Zone Group** to assign each External Paging zone to an External Paging group. Users call the External Paging group when broadcasting announcements to the external zone. When programming, the zones on the PGDAD adapter are numbers 1-8. On the UX5000, the CCPU's zone is number 9.

To simplify programming and troubleshooting, always make the External Paging Zone Group the same number as the External Paging zone (i.e., 1 = 1, 2 = 2, etc.).

Input Data

External Speaker Number	1-9
-------------------------	-----

Item No.	Paging Group Number	Default
01	0-8 (0 = no setting)	Speaker 1 (PGDAD) = 1 (Group 1) Speaker 2 (PGDAD) = 2 (Group 2) Speaker 3 (PGDAD) = 3 (Group 3) Speaker 4 (PGDAD) = 4 (Group 4) Speaker 5 (PGDAD) = 5 (Group 5) Speaker 6 (PGDAD) = 6 (Group 6) Speaker 7 (PGDAD) = 7 (Group 7) Speaker 8 (PGDAD) = 8 (Group 8) Speaker 9 (CCPU) = 1 (Group 1)

OR
Press MIC once to enter a new item number.
OR
Press MIC until you've exited that series's programming section.

Program 31 : Paging Setup

31-05 : Universal Night Answer/Ring Over Page

Level:
IN

Feature Availability

- Available.

Description

Use **Program 31-05 : Universal Night Answer** to assign Universal Night Answer ringing to each External Paging zone. For each trunk port, you make a separate entry for each External Paging zone. When programming, the zones on the PGDAD adapter are numbers 1-8. The CCPU's zone is number 9. For UNA ringing, you make a separate entry for each Night Service mode.

This program is also used for an external ringer connected to a 2PGDAD module.

Input Data

Trunk Port Number	1-200
-------------------	-------

External Speaker Number	1-9
-------------------------	-----

Item No.	Day/Night Mode	Input Data	Default
01	1-8	0 = No Ringing 1 = Ringing	0

Conditions

None

Feature Cross Reference

- Night Service
- Paging, External

Feature Availability

- Available.

Description

Use **Program 31-08 : BGM on External Paging** to set the Background Music option for each External Paging zone. If enabled, the UX5000 will play Background Music over the zone when it is idle.

When programming, the zones on the PGDAD adapter are numbers 1-8. For the UX5000, the CCPU's zone is number 9.

Input Data

External Speaker Number	1-9
-------------------------	-----

Item No.	Description	Input Data	Default
01	Use this option to allow or prevent the External Paging zone you select from broadcasting Background Music when it is idle.	0 = Disable 1 = Enable	0

Conditions

None

Feature Cross Reference

- Background Music
- Paging, External

Program 31 : Paging Setup

31-08 : BGM on External Paging

Terminal Programming Instructions

To enter data for Program 31-08 (BGM on External Paging):

1. Enter the programming mode.
2. 31 08

```
31-08-01  SPK 1
BGM      0:No
back  ↑      ↓  select
```

3. Enter the number of the item you want to program.

```
31-08-nn  SPK n
nnnnn
←      -      +      →
```

4. Enter the External Speaker number to be defined or press FLASH to use the displayed entry.
5. Enter data for the item you selected + HOLD.
6. Enter data for the next item in the program.
OR
Press MIC once to enter a new item number.
OR
Press MIC until you've exited that series's programming section.

Program 32 : Door Box and Sensor Setup

32-01 : Door Box Timers

Level:

IN

Feature Availability

- Available.

Description

Use **Program 32-01 : Door Box Timers** to assign the timers used for the Door Box.

Input Data

Item No.	Item	Input Data	Default
01	Door Box Answer Time A keyset user must answer Door Box chimes within this interval.	0-64800	30
02	Door Lock Cancel Time When a single line (2500 type) terminal user hook flashes or a keyset user presses the FLASH key while talking to a Door Box, the strike stays open for this interval.	0-64800	10
03	Off-Premise Call Forward by Door Box Disconnect Timer Define the conversation period for an Off-Premise Call Forward by Door Box call. When this timer expires, the caller will hear busy tone for 3 seconds (fixed timer) and the call will then be disconnected.	0-64800	60

Program 34 : Tie Line Setup

34-06 : Add / Delete Digit for E&M Tie Line

Level:

IN

Feature Availability

- Available.

Description

Use **Program 34-06 : Add / Delete Digit for E&M Tie Line** to set digits that the UX5000 should add or delete for tie lines.

- **Delete Digit**

Some tie line networks pass the location number and extension number to the remote side. This program allows the UX5000 to ignore such numbers for a call.

If individual extensions do not want to receive an incoming call, you could delete all of the digits including the extension number.

- **Add Digit**

If a tie line network requires additional digits to reroute the call to a location, the digits for the location can be added to the received digits.

Input Data

Incoming Trunk Group Number	001-100
-----------------------------	---------

Item No.	Item	Input Data	Default
01	Delete Digit	0-255 (255 = delete all digits)	0
02	Additional Dial Digits	Up to 4 digits	No setting

Conditions

None

Item No.	Name	Input Data	Default		Related Program
			COS 01-14	COS 15	
04	<p>Route Table Setup of Target Dial The option sets how the UX5000 uses the route data (gathered in Item 3) to route incoming ANI/DNIS calls).</p> <p>If option '2' is selected and the call is to be routed using the DID table (1), up to 8 digits can be matched. The number of expected digits set in Program 22-09-01 must match the ANI digits defined in Program 22-11-01. For example, if an ANI/DNIS number received was *2035551234*3001* and Program 22-09-01=4, then the entry in 22-11-01 must be 1234 with the defined target extension.</p> <p>If the call is to be routed using the ABB table (0), up to 24 digits can be matched. Define the range of the ABB table to be used in Program 34-09-06. The data is then compared to the entries in Program 13-04-01 and then routed according to Program 13-04-03.</p>	<p>0 = ABB Table (Program 13-03) 1 = DID Table (Program 22-11)</p>	0	0	13-04-01 13-04-03 22-09-01 22-11 34-09-05 34-09-06
05	<p>ANI/DNIS Display as Target Dial Name Use this option to set if ANI data should appear on terminal displays as part of Caller ID display.</p>	<p>0 = Display Off 1 = Display On</p>	1	0	13-04 20-09-02 22-11-03 23-09-04
06	<p>Routing ABB Table Setup Use this option to define which part of the ABB Table set up in Program 13-04 the UX5000 will use for ANI/DNIS Caller ID look-ups and ANI/DNIS routing. This is required if Items 4 and 5 above are 1 (Caller ID on). When you specify a starting and end address, the UX5000 uses the part of the table for look-ups. When you specify a starting address and length, the UX5000 uses that part of the table for routing. If the incoming ANI/DNIS number data matches the Number entry in the table, the UX5000 routes according to the associated Name data. That data can be an extension, Department Group pilot number, the voice mail master number or a trunk ring group.</p>	<p>Start = 0, 100-1900 End = 0, 99-1999</p>	<p>Start = 1000 End = 1199</p>	<p>Start = 0 End = 0</p>	13-04
07	<p>Routing on ANI/DNIS Error This option lets you determine how the UX5000 will handle an ANI/DNIS call if a data error is detected in the incoming data string.</p>	<p>0 = Play busy tone to caller 1 = Route the caller to the ring group specified in Program 25-03</p>	1	0	25-03

Program 35 : SMDR and Account Code Setup

35-01 : SMDR Options

Level:

IN

Feature Availability

- Available.

Description

Use **Program 35-01 : SMDR Options** to set the SMDR (Station Message Detail Recording) options for each of the 8 SMDR ports. Refer to the following chart for a description of each option, its range and default setting.

Input Data

SMDR Port Number	1-8
------------------	-----

Item No.	Item	Input Data	Default
01	Output Port Type This option specifies the type of connection used for SMDR. The baud rate for the COM port should be set in Program 10-21-02 or 15-02-19.	0 = No setting 3 = LAN	0
02	Output Destination Number This option specifies the SMDR printer output extension (CTA/CTU extension number).	Up to 8 digit	No setting
03	Header Language Specify the language in which the SMDR header should be printed.	0 = English 1 = German 2 = French 3 = Italian 4 = Spanish	0
04	Omit Digits The number of digits entered in this option do not print on the SMDR report. For example, if the entry is 10, the first 10 digits a user dials do not appear on the SMDR report.	0-24 (0 = Not applied)	0
05	Min. Digits Outgoing calls must be at least this number of digits for inclusion in the SMDR report.	0-24 (0 = Not applied)	0
06	Min. Call Duration The duration of a call must be at least this interval to be included on the SMDR report.	0-65535 seconds (0 = All)	0
07	Min. Ring Time A call must ring for at least this interval to be included on the SMDR report.	0-65535 seconds (0 = All)	0

Program 35 : SMDR and Account Code Setup

35-01 : SMDR Options

Item No.	Item	Input Data	Default
08	SMDR Format <i>Do not change:</i> This option is added to allow an increased account code field from 8 to 16 when used in the U.K. This allows 16 characters of the Caller ID name to be displayed. For the U.S., this option is set to "0" and should remain at this setting as 16 characters are already provided for the account code field.	0: FORMAT 1 (Format for NA) 1: FORMAT 2 (Format for UK)	0

Program 35 : SMDR and Account Code Setup

35-02 : SMDR Output Options

Level:

IN

Feature Availability

- Available.

Description

Use **Program 35-02 : SMDR Output Options** to set the SMDR (Station Message Detail Recording) output options for each of the 8 SMDR ports. Refer to the following chart for a description of each option, its range and default setting.

Input Data

SMDR Port Number	1-8
------------------	-----

Item No.	Item	Input Data	Default
01	Toll Restricted Call SMDR can include or exclude calls blocked by Toll Restriction.	0=Not Displayed 1=Displayed	1
02	PBX Calls When the UX5000 is behind a PBX, SMDR can include all calls or just calls dialed using the PBX trunk access code.	0=Not Displayed 1=Displayed	1
03	Trunk Number or Name Select whether the UX5000 should display the trunk name (0) or the number (1) on SMDR reports. <i>If this option is set to "0", Program 35-02-14 must be set to "0".</i>	0=Name 1=Number	1
04	Summary (Daily) Set this option to (1) to have the SMDR report provide a daily summary (at midnight every night).	0=Not Displayed 1=Displayed	1
05	Summary (Weekly) Set this option to (1) to have the SMDR report provide a weekly summary (every Saturday at midnight).	0=Not Displayed 1=Displayed	1
06	Summary (Monthly) Set this option to (1) to have the SMDR report provide a monthly summary (at midnight on the last day of the month).	0=Not Displayed 1=Displayed	1
07	Toll Charge Cost Set this option to (1) have the SMDR report include toll charges.	0=Not Displayed 1=Displayed	1
08	Incoming Call Enable this option (1) to have the SMDR report include incoming calls. If you disable this option (0), incoming calls will not print.	0=Not Displayed 1=Displayed	1
09	Extension Number or Name Set this option (1) to have the SMDR report include extension numbers. Set this option (0) to have the SMDR report include extension names.	0=Name 1=Number	1
10	All Lines Busy (ALB) Output Determine if the All Lines Busy (ALB) indication should be displayed.	0=Not Displayed 1=Displayed	0

Program 35 : SMDR and Account Code Setup

35-02 : SMDR Output Options

Item No.	Item	Input Data	Default
11	Walking Toll Restriction Table Number - Not Used -	0=Not Displayed 1=Displayed	1
12	DID Table Name Output Determine if the DID table name should be displayed.	0=Not Displayed 1=Displayed	0
13	CLI Output When DID to Trunk Determine if the CLI output should be displayed for DID.	0=Not Displayed 1=Displayed	
14	Date Determine whether the date should be displayed on SMDR reports. <i>This option must be set to "0" if the trunk name is set to be displayed in Program 35-02-03.</i>	0=Not Displayed 1=Displayed	0
15	CLI / DID Number Determine if the CLI/DID Number should be displayed. <i>Caller ID Name (2) requires software 4.0E+.</i>	0=Caller ID Number 1=DID Calling Number 2=Caller ID Name	0
16	Trunk Name or Received Dialed Number Determine which should be displayed for an incoming call - the trunk name as assigned in Program 14-01-01 (0), the received dialed number (1), or both (2). If set to (1), ANI/DNIS trunks can print DNIS digits. For DID trunks, if the received number is not defined in Program 22-11-01, then no number will be printed. If both (2) is selected, the SMDR detail will show the 3 characters of the trunk name, followed by the last 6 digits of the received dialed number.	0=Trunk port name 1=Received dialed number 2=Both	0
17	Print Account Code or Caller ID Name Determine whether the Account Code or Caller ID name should appear in the SMDR record. Note: Program 35-01-08 must be set to "0" for this entry to be followed.	0=Account Code 1=Caller ID Name	0
18	Caller ID Name Output Method Select whether to display up to 16 characters of the Caller ID Name on the same line as the call record or if a line feed should be added and up to 24 characters of the Caller ID Name will be displayed on the following line. If the line feed option is selected, the Caller ID Name will be displayed on the next line as : NEXT "Caller ID Name". This setting will work regardless of the setting in Program 35-02-15. Note: With this option set to "1", if your communications program (such as HyperTerminal) has the line wrap option enabled in the ASCII setup, an additional line break may appear above the Caller ID name line.	0=Same Line 1=Line Feed Prior to Caller ID	0
19	Dialed Number Output Format Determine if the dialed number should display the first 20 digits or the last 20 digits. This option is only available for outgoing calls.	0=First 20 Digits 1=Last 20 Digits	0

Program 35 : SMDR and Account Code Setup

35-02 : SMDR Output Options

Item No.	Item	Input Data	Default
20	<p>External Information CFW Mode Determine which information is displayed in the "STATION" area for a transferred call when the extension has Call Forward set with an Abbreviated Dial number as the destination. Selecting "0" (Transfer Info) will display the extension number which called the extension with external Call Forward set. Selecting "1" (Incoming Info) will display the extension number which has the external Call Forward set.</p> <p>This option only applies when Call Forward is set using a service code (Program 11-11-01~11-11-07) and the destination uses an Abbreviated Dial bin. It does not include Off-Premise or Centrex transfers.</p>	0 = Transfer Information 1 = Incoming Information	0

Level:

IN

Feature Availability

- Available.

Description

In **Program 40-10 : Voice Announcement Service Option** define the UX5000 options for the Voice Announcement feature with the VRS.

Input Data

Item No.	Item	Input Data	Default	Related Program
01	VRS Fixed Message Enable (1) or disable (0) the UX5000's ability to play the fixed VRS messages (such as "You have a message.").	0 = Not Used 1 = Used	1	
02	General Message Number This item assigns the VRS message number to be used as the General Message.	0-100 (0=No General Message Service)	0	
03	VRS No Answer Destination This item assigns the transferred Ring Group when the VRS is unanswered after Call Forwarding with Personal Greeting Message.	0-100 (Incoming Ring Group Number)	0 (No Setting)	
04	VRS No Answer Time If an extension has Personal Greeting enabled and all VRS ports are busy, a DIL or DISA call to the extension will wait this interval for a VRS port to become free.	0-64800	0	
05	Park and Page Repeat Timer If a Park and Page is not picked up within this interval, the Paging announcement repeats.	0-64800	0	
06	Set VRS Message for Private Call Refuse Use this option to assign the VRS message number to be played when Private Call Refuse is enabled for a call with "Private" Caller ID information. When the Fixed message is set, the VRS message is "Service finished. Disconnect the line please".	0 = Does not play message 1-100 = VRS message number to play, 101 = Fixed message)	0	14-01-27
07	Set VRS Message for Caller ID Refuse This item assigns the VRS message number to be used as the Caller ID Refuse message when the Caller ID number matches the entry in Program 22-16. When the Fixed message is set, the VRS message is "Service finished. Disconnect the line please".	0 = Does not play message 1-100 = VRS message number to play, 101 = Fixed message)	0	14-01-27

Program 40 : Voice Mail Setup

40-10 : Voice Announcement Service Option

08	Busy Call Attendant Message Define the Call Attendant message number to be heard when a called extension is busy. This is used when setting the option system-wide. (Program 15-01-08 is not used.)	0=no message 001-100= message number	0	15-01-08
09	No Answer Call Attendant Message Define the Call Attendant message number to be heard when a called extension does not answer. This is used when setting the option system-wide. (Program 15-01-09 is not used.)	0=no message 001-100= message number	0	15-01-08

Program 41 : ACD Setup

41-02 : ACD Group and Agent Assignments

Level:

SA

Feature Availability

- Available.

Description

In **Program 41-02 : ACD Group and Agent Assignments**, for each ACD extension number, assign an ACD Group (1-64). An ACD Group number is assigned to each Work Period number (1-8).

The assigned extension will work as an ACD agent extension in the following cases;

- The trunk belonging to an ACD group receives an incoming call while an ACD agent is logged in.
- An extension calls or transfers a call to an ACD group using the ACD group pilot number.
- An incoming call is received with a DID/DISA number which is assigned as an ACD pilot number.

Input Data

Extension Number	Up to 8 digits
------------------	----------------

Item No.	ACD Work Period Mode Number	ACD Group No	Default
01	1-8	0-64	0

Conditions

None

Feature Cross Reference

- Automatic Call Distribution (ACD)

Program 41 : ACD Setup

Program 41 : ACD Setup

41-03 : Incoming Ring Group Assignment for ACD Group

Level:

SA

Feature Availability

- Available.

Description

In **Program 41-03 : Incoming Ring Group Assignments for ACD Group**, for each incoming trunk group set up in Program 22-05, designate into which ACD Group (1-64) the trunks should ring for each of the eight Work Periods. Also use this program to assign an Incoming Trunk Ring Group as priority or normal. Use Program 41-05 and 41-06 to set up the Work Schedules and Work Periods for trunks. Use Program 41-07 to assign the Work Schedules to the days of the week.

Input Data

Incoming Ring Group Number	1-100
----------------------------	-------

ACD Work Period Mode Number	1-8
-----------------------------	-----

Item No.	Item	Input Data	Default
01	ACD Group Number	0-64	0
02	Night Announcement Service	0 = No 1 = Yes	0
03	Priority Determine whether an incoming call to a trunk ring group should follow a priority assignment (0=normal, 1-7 [1=highest priority, 7=lowest priority]).	0, 1-7 (0 = No priority)	0

Conditions

None

Feature Cross Reference

Program 41 : ACD Setup

41-04 : ACD Group Supervisor

Level:

SA

Feature Availability

- Available.

Description

For each ACD Group (1-64), use **Program 41-04 : ACD Group Supervisor** to assign the group's supervisor extension and operating mode. A supervisor's extension receives ACD Group calls just like all other agents. Operating modes are:

- 0 = Supervisor's extension does not receive ACD Group calls.
- 1 = Supervisor's extension receives ACD Group overflow calls only.
- 2 = Supervisor's extension receives ACD Group calls just like all other agents.

An ACD Group can have only one supervisor. In addition, an extension can be a supervisor for only one ACD Group.

Input Data

ACD Group No	01-64
--------------	-------

Item No.	Item	Input Data	Default
01	Group Supervisor Extension	Extension Number (Up to 8 digits) (0-9, *, #)	No setting
02	Operation Type	0 = Not receive any ACD incoming calls 1 = Receive ACD incoming calls in case of overflow 2 = Receive ACD incoming calls all the time	0

Conditions

If you assign an extension as a ACD Group Supervisor in this program, you cannot program the same extension as a System Supervisor in Program 41-01-01.

Feature Cross Reference

- Automatic Call Distribution (ACD)

Program 41 : ACD Setup

41-04 : ACD Group Supervisor

Terminal Programming Instructions

To enter data for Program 41-04 (ACD Group Supervisor):

6. Enter data for the next item in the program.
OR
Press MIC once to enter a new item number.
OR
Press MIC until you've exited that series's programming section.

Program 41 : ACD Setup

41-05 : ACD Agent Work Schedules

Level:

SA

Feature Availability

- Available.

Description

Use **Program 41-05 : ACD Agent Work Schedules** to set up the Work Schedules for ACD Agents and Groups. For each ACD Work Schedule (1-4), designate the start and stop times for each of the eight Work Periods. Once you set up the schedules in this program, assign them to days of the week in Program 41-07. (This is the same program used by the Trunk Work Schedules.)

ACD extensions can log in only during their work period. ACD extensions will receive the following types of calls when they are logged in;

- ACD Call on a Trunk
If the incoming ring group is assigned in the operating time (Program 41-03 and 41-06).
- ACD Pilot Number Call
Any time if ACD extensions are available.

Input Data

ACD Work Schedule Time Pattern	1-4
--------------------------------	-----

Item No.	Work Period Mode Number	Start Time	End Time	Default
01	1-8	0000-2359	0000-2359	(Start) 0000 (End) 0000

Conditions

None

Program 41 : ACD Setup

41-08 : ACD Overflow Options

Level:	Feature Availability
SA	<ul style="list-style-type: none"> Available.

Description

For each ACD Group (1-64), use **Program 41-08 : ACD Overflow Options** to assign the overflow mode (0-9), destination and announcement message types. Delay announcement functions are not available for ACD pilot number call. Each ACD Group can have unique overflow options. The table below outlines the entry options.

Input Data

ACD Group No	01-64
--------------	-------

Item No.	Item	Input Data	Default
01	Overflow Operation Mode Select the type of overflow, if any, for an ACD group.	0 = No overflow 1 = Overflow with No Announcement 2 = No Overflow with First Announcement Only 3 = No Overflow with First & Second Announcements 4 = Overflow with First Announcement Only 5 = Overflow with First & Second Announcement 6 = -- Not used -- 7 = -- Not used -- 8 = No Overflow with Second Announcement Only 9 = Overflow with Second Announcement Only	0
02	ACD Overflow Destination Specify the destination option to which ACD Overflow calls should be transferred	0 = No Setting 1-64 = ACD Group 65 = Overflow Table (Program 41-09) 66 = Voice Mail Integration 67 = Off-Premise via ABB Dial Bin (Program 41-08-05) 68 = Incoming Ring Group (Program 41-08-06)	0
03	Delay Announcement Source Type For each ACD Group (1-64), assign the announcement message types. Delay announcement functions are not available for ACD pilot number call. Each ACD Group can have unique overflow options. If multiple sources are required, an entry of "4" (Flexible) is required. the UX5000 will then refer to Programs 41-08-08 and 41-08-09.	0 = ACI 1 = VRS (DSPDB) 2 = VMI (Local Voice Mail Integration, in-skin) 3 = CVM (Centralized Voice Mail) 4 = Flexible (Program 41-08-08, 41-08-09)	0

Program 41 : ACD Setup

41-08 : ACD Overflow Options

04	ACD Overflow Transfer Time Overflow out of the ACD queue (mode 4 only) occurs after this timer expires. The UX5000 starts this timer as soon as a call goes into queue. Disable this timer (0) if you want queued callers to stay in queue until they are answered or they hang up. If you want queued callers to eventually overflow, consider setting this value at 180 seconds. When it times out, the UX5000 overflows the caller to the destination defined in Program 41-09-01.	0-64800 (Seconds)	30
05	Abbreviated Dial Area When Overflow This program defines which Abbreviated Dial dial to use when Program 41-08-02 is programmed with an entry of '67'.	0 – 1999 (Abbreviated dial areas)	1999
06	Incoming Ring Group When Overflow This program defines which incoming Ring Group to use when Program 41-08-02 is programmed with an entry of '68'.	1 – 100 (Incoming Ring Group)	1
07	DSPDB-VM Message Box No With Overflow <i>- Not Used in the U.S. -</i>	0-500	0
08	First Delay Announcement Source Type If Program 41-08-03 is defined as "4" (Flexible), select the source for the first delay announcement. When using the ACI, define the delay announcement items in Program 41-10. With the VRS, use Program 41-11, and if either local voice mail or centralized voice mail is selected, define the voice mail delay announcement items in Program 41-19. This entry is ignored unless Program 41-08-03 is set to "4".	0 = ACI 1 = VRS (DSPDB) 2 = LVM (Local Voice Mail) 3 = CVM (Centralized Voice Mail)	0
09	Second Delay Announcement Source Type If Program 41-08-03 is defined as "4" (Flexible), select the source for the second delay announcement. When using the ACI, define the delay announcement items in Program 41-10. With the VRS, use Program 41-11, and if either local voice mail or centralized voice mail is selected, define the voice mail delay announcement items in Program 41-19. This entry is ignored unless Program 41-08-03 is set to "4".	0 = ACI 1 = VRS (DSPDB) 2 = LVM (Local Voice Mail) 3 = CVM (Centralized Voice Mail)	0

Conditions

Delay announcement functions are not available for ACD pilot number call.

Feature Cross Reference

- Automatic Call Distribution (ACD)

Program 41 : ACD Setup

41-12 : Night Announcement Setup

Level:

IN

Feature Availability

- Available.

Description

Use **Program 41-12 : Night Announcement Setup** to define the night announce voice resource and sending time for each ACD group. Night announcement availability depends on the setting in Program 41-03-02. The night announcement function is not available for ACD pilot number calls.

Input Data

ACD Group Number	01-64
------------------	-------

Item No.	Item	Input Data	Default
01	Night Announcement Source Type	0 = ACI 1 = VRS (DSPDB)	0
02	Night Announcement ACI Port Number	0-96 (0 = No setting)	0
03	ACD Night Announce Sending Time	0-64800	30

Conditions

The night announcement function is not available for ACD pilot number call.

Feature Cross Reference

- Automatic Call Distribution (ACD)

Program 41 : ACD Setup

41-12 : Night Announcement Setup

Terminal Programming Instructions

To enter data for Program 41-12 (Night Announcement Setup):

1. Enter the programming mode.
2. 41 12

```
41-12-01  ACD Group1
NT Source  0:ACI
back ↑      ↓ select
```

3. Enter the number of the item you want to program.

```
41-12-nn  ACD Groupnn
nnnnn
← - + →
```

4. Enter the ACD Group number to be defined or press FLASH to use the displayed entry.
5. Enter data for the item you selected + HOLD.
6. Enter data for the next item in the program.
OR
Press MIC once to enter a new item number.
OR
Press MIC until you've exited that series's programming section.

Program 41 : ACD Setup

41-13 : VRS Message Number for Night Announcement

Level:

IN

Feature Availability

- Available.

Description

Use **Program 41-13 : VRS Night Announcement** to define the VRS message number to be used as the night announcement. This program is activated when the night announcement source is assigned as VRS in Program 41-12.

Input Data

ACD Group No	01-64
--------------	-------

Item No.	Item	Input Data	Default
01	VRS Message Number	0-100 (0 = No message)	0
02	Tone Kind at Message Interval	0 = Ring Back Tone 1 = MOH Tone 2 = BGM Source	0

Conditions

None

Feature Cross Reference

- Automatic Call Distribution (ACD)

Program 41 : ACD Setup

41-13 : VRS Message Number for Night Announcement

Terminal Programming Instructions

To enter data for Program 41-13 (VRS Night Announcement):

1. Enter the programming mode.
2. 41 13

```
41-13-01  ACD Group1
VRS Msg No  0
back  ↑      ↓  select
```

3. Enter the number of the item you want to program.

```
41-13-nn  ACD Groupnn
nnnnn
←      -      +      →
```

4. Enter the ACD Group number to be defined or press FLASH to use the displayed entry.
5. Enter data for the item you selected + HOLD.
6. Enter data for the next item in the program.
OR
Press MIC once to enter a new item number.
OR
Press MIC until you've exited that series's programming section.

Program 41 : ACD Setup

41-14 : ACD Options

Level:

SA

Feature Availability

- Available.

Description

Use **Program 41-14 : ACD Options** to set various options for ACD Groups. When you set an option for an ACD Group, the setting is in force (if applicable) for all agents within the group. The chart below shows each of the ACD options, the entries available, and the default entry.

Input Data

ACD Group No	01-64
--------------	-------

Item No.	Item	Input Data	Default	Related Programs
01	Emergency Call Operation Mode The supervisor must be logged in and have an Emergency Key programmed for this feature. By pressing the key once, the supervisor monitors the call - pressing twice barges in on the call.	0=Call to system supervisory extension when group supervisory extension is busy. 1=No calls to system supervisory extension when group supervisory extension is busy.	0	
02	Automatic Wrap Up Mode Enable/disable Automatic Wrap Up mode.	0=After wrap up mode key is pressed. 1=After call is finished automatically.	0	
03	ACD Priority for Overflow Calls Determine whether the ACD group should use its own priority assignment or if it should follow the priority assigned in Program 41-03-03.	0=Own group's priority 1=Priority order by Program 41-03-03	0	41-03-03
04	Automatic Answer Enable/disable Automatic Answer for agents using headsets.	0=Off 1=On	0	
05	-- Not used --			
06	Call Queuing after 2nd Announcement Use this option to determine whether an outside caller should hear a final announcement [ex: the company is closed] (1) or whether the caller should be placed back into queue for the ACD group (0).	0=Enable 1=Disable	0	
07	Automatic Off Duty for SLT Enable/disable Automatic Off Duty (rest) mode for agents with SLT terminals.	0=No change to off duty mode 1=Change to off duty mode automatically	0	
08	ACD off duty mode	0=Can not receive internal call 1=Can receive internal call	0	

Program 41 : ACD Setup

41-14 : ACD Options

09	Automatic Wrap Up End Time	0-64800 (Seconds)	0	
10	ACD No Answer Skip Time Set how long a call into the ACD Group will ring an idle extension before routing to the next agent. This timer must be greater than Program 20-04-03 : Delay Ring Timer for the ACD Call Coverage Key with delayed ringing to work.	0-64800 (Seconds)	10	20-04-03
11	-- Not used --			
12	Start Headset Ear Piece Ringing (for SLT)	0-64800 (Seconds)	0	
13	ACD Queue 1-Digit Assignment When the VRS provides the announcements for an ACD queue, a caller waiting in the ACD queue for an available agent, can dial a single digit code to exit the queue and be transferred to a defined destination. This option can be set to allow the user to dial out during the delay announcement or within a set time after the announcement finishes. In order for this option to work, a VRS must be installed in the UX5000 and it must be providing the ACD announcements. Define the options for escaping from queue:			41-14-14 41-14-15
	• ACD Group Number	01-64	-	
	• Single Digit Code	1-9, 0, *, #	No Entry	
	• Destination Type If the Destination Type is set to call an extension, if the extension is busy at the time the caller presses the single digit code, the call will stay in queue. If the Destination Type is set to call an Abbreviated Dial number and all trunks are busy, the UX5000 will automatically retry every 5 seconds. This is a fixed timer and can not be changed. If a trunk becomes available within the 5 seconds, the UX5000 waits until the timer expires before seizing the trunk. If the Destination Type is set to transfer to an extension number, if the destination extension is set for Call Forwarding, the Call Forwarding will be ignored. If the Destination Type is set to transfer to the voice mail, create a separate voice mail box for each ACD pilot number (Program 11-17). The caller will be transferred to the voice mail box for that group.	0 = None 1 = Extension or Voice Mail 2 = Incoming Ring Group 3 = Abbreviated Dial Bin 4 = ACD Group	0 (None)	11-17

Program 41 : ACD Setup

41-14 : ACD Options

13 (cont.)	<ul style="list-style-type: none"> Destination Number 	<p><i>If 1 selected as type:</i> extension number or voice mail pilot number (8 digits max.), (entering the voice mail pilot number allows for integration into the Queue's pilot number voice mailbox).</p> <p><i>If 2 selected as type:</i> Incoming Ring Group Number (001-100)</p> <p><i>If 3 selected as type:</i> Abbreviated Dial Bin (abbreviated dial destination must be outgoing trunk call only - no intercom calls) (0-1999)</p> <p><i>If 4 is selected as type:</i> ACD Group Number (01-64)</p>	No Entry	
14	<p>DTMF Detector Assignment For each ACD Group, determine whether the DTMF should be detected during the Delay Announcement or after the Delay Announcement has finished.</p> <p>If this program and Program 41-14-15 are both set to "0", the Escape From Queue feature is disabled.</p> <p>If this program is set to "1", Program 41-14-15 is ignored. The DTMF tone will only be detected while the Delay Announcement is playing.</p>	<p>0 = Detect DTMF After Delay Announcement</p> <p>1 = Detect DTMF During Delay Announcement</p>	1	41-14-15
15	<p>DTMF Detect Time After Delay Announcement For each ACD Group (01-64), determine how long the UX5000 allows the user to dial the Escape From Queue code defined in 41-14-13 after the Delay Announcement. Once this timer expires, the user will not be able escape from queue until the next announcement plays. This program is used when Program 41-14-14 is set to "0" and applies to both 1st and 2nd Delay Announcements. If this program and Program 41-14-14 are both set to "0", the feature is disabled.</p>	0-64800 (Seconds)	0	41-14-13 41-14-14

Conditions

None

Feature Cross Reference

Program 41 : ACD Setup

41-15 : ACD Queue Alarm Information

Level:

SA

Feature Availability

- Available.

Description

Use **Program 41-15 : ACD Queue Alarm Information** to assign the options for “Audible Indication” for Log Out / Off Duty mode for each ACD group.

These program settings will provide an alarm to the agents, but no Queue Status Display is indicated. *Do not use these programs* if the alarm options are defined in Program 41-20-01 through 41-20-05.

Feature	Available in Program 41-15	Available in Program 41-20
Queue Status Display	---	Yes
Queue Status Display Time	---	Yes
Alarm	Yes	Yes
Alarm Send Time	Program 41-15-02 determines the length/interval of the alarm.	Yes
Interval Time of Queue Status Display		Yes
Class of Service	---	Yes
Timing of alarm and display queue status	Alarm triggered after the number of calls in Program 41-15-01 is exceeded.	Alarm triggered after the number of calls in Program 41-20-01 is exceeded. Then follows Program 41-20-03 timing for displaying status.

Input Data

ACD Group No.	01-64
---------------	-------

Item No.	Item	Input Data	Default
01	The number of calls in ACD Queue to activate Alarm information	0-200 (0 = No Alarm)	0
02	The interval time of Alarm information	0-64800 (Sec.)	0

Conditions

None

Feature Cross Reference

Program 41 : ACD Setup

41-19 : Voice Mail Delay Announcement

Level:

SA

Feature Availability

- Available.

Description

Use **Program 41-19 : Voice Mail Delay Announcement** to assign voice mail ACD Announcement Mailboxes as the message source for the 1st and 2nd Announcement Messages. This option is only applicable to ACD Overflow Modes 1, 4, 5 and 9 with announcement type 2 [Program 41-08-03]. This can also work with modes 2, 3, and 8, but Program 41-08-03 must be set to "0". Refer to Program 41-08 for more on setting up the ACD overflow options.

Input Data

ACD Group No	01-64
--------------	-------

Item No.	Item	Input Data	Default
01	Delay Message Start Timer Determine how long the UX5000 waits before playing the Delay Message.	0-64800	0
02	Mailbox Number for 1st Announcement Message Assign voice mail ACD Announcement Mailbox as the message source for the 1st Announcement Message. This option is only applicable to ACD Overflow Modes 1, 4, 5 and 9 (source 0/type2). Use Program 41-08 to set up the ACD overflow options.	Dial (Up to 8 digits)	No Setting
03	1st Delay Message Sending Count Determine the 1st Delay Message Sending Count. This entry must be set to 1 or higher in order for the message to play.	0 = No Message Played, 1-255	0
04	Mailbox Number for 2nd Announcement Message Assign voice mail ACD Announcement Mailboxes as the message source for the 2nd Announcement Message. This option is only applicable to ACD Overflow Modes 1, 4, 5 and 9 (source 0/type2). Use Program 41-08 to set up the ACD overflow options.	Dial (Up to 8 digits)	No Setting
05	2nd Delay Message Sending Count Determine the 2nd Delay Message Sending Count. This entry must be set to 1 or higher in order for the message to play.	0 = No Message Played, 1-255	0
06	Wait Tone Type at Message Interval Define the what the caller will hear between the messages.	0 = Ring Back Tone 1 = MOH Tone 2 = BGM Source	0
07	ACD Forced Disconnect Time After 2nd Announcement Assign how long the UX5000 should wait after the end of the ACD delay message before disconnecting.	0-64800	60
08	Delayed Message Interval Time Set the timer for the interval between the Delayed Messages.	0-64800	20

Program 41 : ACD Setup

41-20 : ACD Queue Display Settings

Level:
SA

Feature Availability

- Available.

Description

Use **Program 41-20 : ACD Queue Display Settings** to assign the options for the ACD Queue Status Display feature. This program allows the Queue Status Display, as well as an alarm to sound, when the parameters in this program are met.

Program 41-15 can also provide a queue alarm to the agents. The options in Program 41-20 should not be used if 41-15 is set.

Feature	Available in Program 41-15	Available in Program 41-20
Queue Status Display	---	Yes
Queue Status Display Time	---	Yes
Alarm	Yes	Yes
Alarm Send Time	Program 41-15-02 determines the length/interval of the alarm.	Yes
Interval Time of Queue Status Display		Yes
Class of Service	---	Yes
Timing of alarm and display queue status	Alarm triggered after the number of calls in Program 41-15-01 is exceeded.	Alarm triggered after the number of calls in Program 41-20-01 is exceeded. Then follows Program 41-20-03 timing for displaying status.

Input Data

ACD Group No	01-64
--------------	-------

Item No.	Item	Input Data	Default
01	Number of Calls in Queue Set the number of calls that can accumulate in the ACD queue before the Queue Status Display (and optional queue alarm) occurs.	0=no display, 1-200	0
02	Queue Status Display Time Set how long the Queue Status display remains on the terminal's display.	0-64800 seconds	5
03	Queue Status Display Interval Set the interval that refreshes the Queue Status Alarm time in queue display and causes the optional queue alarm to occur on terminals active on a call, logged out, or in wrap-up.	0-64800 seconds	60

Program 41 : ACD Setup

41-20 : ACD Queue Display Settings

04	ACD Call Waiting Alarm Enable or disable the queue alarm.	0 = Disable 1 = Enable	0
05	ACD Call Waiting Alarm Send Time Set how long the Call Waiting Alarm should sound.	0-64800 seconds	0

Conditions

None

Feature Cross Reference

- Automatic Call Distribution (ACD)

Program 42 : Hotel Setup

42-03 : Class of Service Options (Hotel/Motel)

Level:

IN

Feature Availability

- Available.

Description

Use **Program 42-03 : Class of Service Options (Hotel)** to set the Hotel/Motel Class of Service (COS) options. Assign Class of Service to extensions in Program 20-06-01. There are 15 Classes of Service. Refer to the following chart for a description of each COS option, its range and default setting. For additional Class of Service options, refer to Programs 20-06 - 20-14.

Input Data

Class of Service Number	01-15
-------------------------	-------

Item No.	Item	Input Data	Default	
			Class 01	Class 02-15
01	Check-In Operation Enable or disable an extension's ability to set the Check In status of an extension.	0 = Disable 1 = Enable	0	0
02	Check-Out Operation Enable or disable an extension's ability to set the Check Out status of an extension.	0 = Disable 1 = Enable	0	0
03	Room Status Output Enable or disable an extension's ability to request Room Status Printouts.	0 = Disable 1 = Enable	0	0
04	DND Setting for Other Extension Enable or disable an extension's ability to Hotel DND for another extension.	0 = Disable 1 = Enable	0	0
05	Wake Up Call Setting for Other Extension Enable or disable an extension's ability to set a Wake Up Call for another extension.	0 = Disable 1 = Enable	0	0
06	Room Status Change for Other Extension Enable or disable an extension's ability to change the house cleaning status of another room.	0 = Disable 1 = Enable	0	0
07	Restriction Class Changing for Other Extension Enable or disable an extension's ability to set the Toll Restriction Level (When Checked In) for another extension.	0 = Disable 1 = Enable	0	0
08	Room-to-Room Call Restriction Enable or disable an extension's ability to set Room-to-Room Call Restriction for another extension.	0 = Disable 1 = Enable	0	0

Program 42 : Hotel Setup

42-03 : Class of Service Options (Hotel/Motel)

Item No.	Item	Input Data	Default	
			Class 01	Class 02-15
09	DND Setting for Own Extension Enable or disable an extension's ability to set Hotel DND for itself.	0 = Disable 1 = Enable	0	0
10	Wake Up Call Setting for Own Extension Enable or disable an extension's ability to set a Wake Up Call for itself.	0 = Disable 1 = Enable	0	0
11	Room Status Change for Own Extension Enable or disable an extension's ability to change the house cleaning status of their own room.	0 = Disable 1 = Enable	0	0
12	SLT Room Monitor Enable (1) or disable (0) a single line terminal's ability to use Room Monitor.	0 = Disable 1 = Enable	0	0
13	PMS Restriction Level Use this option to enable (1) or disable (0) a supervisor extension's ability to set the PMS restriction level for a room terminal.	0 = Disable 1 = Enable	0	0

Program 42 : Hotel Setup

42-03 : Class of Service Options (Hotel/Motel)

Terminal Programming Instructions

To enter data for Program 42-03 (Class of Service Options (Hotel/Motel)):

1. Enter the programming mode.
2. 42 03

```
42-03-01 FCTN Cls1
Check-in      1:On
back  ↑      ↓  select
```

3. Enter the number of the item you want to program.

```
42-03-nn FCTN Clsnn
nnnnn
←      -      +      →
```

4. Enter the Class of Service number to be defined or press FLASH to use the displayed entry.
5. Enter data for the item you selected + HOLD.
6. Enter data for the next item in the program.
OR
Press MIC once to enter a new item number.
OR
Press MIC until you've exited that series's programming section.

Program 42 : Hotel Setup

42-04 : Hotel Mode One-Digit Service Codes

Level:

IN

Feature Availability

- Available.

Description

Use **Program 42-04 : Hotel Mode One-Digit Service Codes** to set up the Hotel Mode one-digit service code. For each Department Group (1-64) you enter the destination for each single digit code (1-9, 0, *, #). The destination can be any code up to four digits long, such as an extension number or access code. These codes can be used by the extensions assigned to Hotel Mode in 42-02-01.

Input Data

Department (Extension) Group Number	01-64
-------------------------------------	-------

Item No.	Received Dial	Destination Number	Default
01	1-9,0,*,#	Up to 8 digits	No setting

Conditions

The one-digit codes you assign in this program wait until the Interdigit timer (Program 21-01-02) expires before executing.

Feature Cross Reference

- Hotel/Motel

Program 42 : Hotel Setup

Program 42 : Hotel Setup

42-05 : Hotel Room Status Printer

Level:

IN

Feature Availability

- Available.

Description

Use **Program 42-05 : Hotel Room Status Printer** to set the output port for the Hotel Data (Check-Out sheet, Room Status etc...) and the output options for the Hotel/Motel feature.

Input Data

Item No.	Item	Input Data	Default
01	Output Port Type If a Hotel Room Status Printer is to be used, enter "3" to select the LAN output.	0 = No setting 1 = CTA 3 = LAN	0
02	Output Destination Number Enter the CTA extension number to which the Hotel Room Status Printer is connected.	Up to 8 digit (Extension number which CTA/CTU is equipped.)	No setting
03	Wake Up Call No Answer Data Enable or disable the ability to have unanswered Wake Up Calls automatically print on the Room Status Printer.	0 = No output 1 = Output Unanswered Wake Up Calls	0
04	Check-Out Sheet Enable or disable the ability to have the Room Status Printer automatically print when a room Checks Out.	0 = No output 1 = Output Room Check Out	0

Conditions

Room Status Reports require a LAN connection or a CTA and a compatible printer. Refer to Data Communications in the feature section for information.

Feature Cross Reference

- Hotel/Motel

 - Press MIC until you've exited that series's programming section.

Program 44 : ARS/F-Route Setup

44-05 : ARS/F-Route Table

Level:

IN

Feature Availability

- Available.

Description

Use **Program 44-05 : ARS/F-Route Table** to set the ARS/F-Route table. There are 4 kinds of order. If the higher priority trunk groups are busy, the next order group will be used. If a lower priority route is selected, the caller may be notified with a beep tone.

Input Data

ARS/F-Route Table Number	1-500
--------------------------	-------

Priority Number	1-4
-----------------	-----

Item No.	Item	Input Data	Default
01	Trunk Group Number Select the trunk group number to be used for the outgoing ARS call.	0-100, 101-150, 255 (0 = No setting, 101-150 = Networking, 255 = Extension Call)	0
02	Delete Digits Enter the number of digits to be deleted from the dialed number.	0-255 (255 = Delete all)	0
03	Additional Dial Number Table Enter the table number (defined in Program 44-06) for additional digits to be dialed.	0-1000	0
04	Beep Tone Select whether or not a beep is heard if a lower priority trunk group is used to dial out.	0 = off 1 = on	0
05	Gain Table Number for Internal Calls Select the gain table number to be used for the internal call (defined in Program 44-07).	0-500 (0 = No setting)	0
06	Gain Table Number for Tandem Connections Select the gain table number to be used for the tandem call (defined in Program 44-07).	0-500 (0 = No setting)	0
07	ARS Class of Service Select the ARS Class of Service to be used for the table. An extension's ARS COS is determined in Program 26-04-01.	0-16	0

Program 44 : ARS/F-Route Setup

44-05 : ARS/F-Route Table

08	Dial Treatment Select the Dial Treatment to be used for the table. If a Dial Treatment is selected, Programs 44-05-02 and 44-05-03 are ignored and the Dial Treatment defined in Program 26-03-01 is used instead.	0-15	0

Program 44 : ARS/F-Route Setup

44-07 : Gain Table for ARS/F-Route Access

Level:
IN

Feature Availability	
•	Available.

Description

Use **Program 44-07 : Gain Table for ARS/F-Route Access** to set the gain/PAD table. If an extension dials ARS/F-Route number;

- The Extension Dial Gain Table is activated, which is assigned in Program 44-05.
- The Extension Dial Gain Table follows “Outgoing transmit” and “Outgoing receive” settings.

If the incoming call is transferred to another line using ARS/F-Route;

- The Tandem Gain Table is activated, which is assigned in Program 44-05.
- The Tandem Gain Table follows the “Incoming transmit” and “Incoming receive” settings for incoming line, and “Outgoing transmit” and “Outgoing receive” settings for the outgoing line.

Note: For ARS/F-Route calls, the codec gains defined in Program 14-01-02 and 14-01-03 are not activated.

Input Data

Gain Table Number	1-500
-------------------	-------

Item No.	Item	Input Data	Default
01	Incoming Transmit	1-63 (-15.5 ~ +15.5dB)	32
02	Incoming Receive	1-63 (-15.5 ~ +15.5dB)	32

45-01 : Voice Mail Integration Options

Level:

IN

Feature Availability

- Available.

Description

Use **Program 45-01 : Voice Mail Integration Options** to customize certain voice mail integration options.

Input Data

Item No.	Item	Input Data	Default	Related Programs
01	<p>Voice Mail Department Group Number Assign which Extension (Department) Group number is to be assigned as the voice mail group (non-networked system). An entry of '0' means there is no voice mail installed.</p> <p>When using Centralized Voice Mail with UX5000 Mail or IntraMail, this has to be defined with the local voice mail's group number. This entry will be used to access the voice mail when the MSG key is pressed and in any other instance where the local voice mail would be used. When you wish to use centralized voice mail as well (as defined in Program 45-01-08 : Voice Mail Integration Options - Networked Voice Mail Department Group Number, then the user would need to dial the master number for the centralized voice mail.</p>	0 - 64 (0=no voice mail)	0	
02	<p>Voice Mail Master Name Enter the Voice Mail master name (non-networked system).</p>	Up to 12 Characters	VOICE MAIL	
03	<p>Voice Mail Screening Enable/disable the UX5000's ability to process the Call Screening commands (1 + extension number) sent from the Voice Mail. You should normally <i>enable</i> this option to allow for Voice Mail Call Screening. Disable this option if your UX5000 has been modified so that extensions begin with the digit 1 (e.g., 101, 102, etc.). Also see the Flexible System Numbering feature.</p>	0 = Off 1 = On	1	45-01-11
04	<p>Park and Page Enable/disable the UX5000's ability to process the Voice Mail's Park and Page (*) commands. You should normally <i>enable</i> this option.</p>	0 = Off 1 = On	1	45-01-12

Program 45 : Voice Mail Integration

45-01 : Voice Mail Integration Options

05	<p>Message Wait Enable/disable the UX5000's ability to process the Voice Mail's Message Wait (#) commands. You should normally <i>enable</i> this option. If enabled, be sure that the programmed Message Notification strings don't contain the code #9 for trunk access. <i>When using the voice mail's Dial Action Table external transfers (ex: to an Abbreviated Dial number), this setting must be set to "0" (off).</i></p>	0 = Off 1 = On	1	45-01-13
06	<p>Record Alert Tone Interval Time This timer sets the interval between voice Mail Conversation Record alerts</p>	0-64800 seconds	30	
07	<p>Mailbox Number Enter the extension number of the voice mail to be accessed as the centralized voice mail unit when the CygniLink feature is used.</p>	Up to 8 Digits	-	
08	<p>Networked Voice Mail Department Group Number Assign which Extension (Department) Group number is to be assigned as the voice mail group with a networked system. An entry of '0' means there is no voice mail installed.</p>	0 - 64 (0=no voice mail)	0	
09	<p>Networked Voice Mail Master Name Enter the Voice Mail master name (networked system).</p>	Up to 12 Characters	C.V.M.	
10	<p>NSL Protocol Support This option must be enabled (1) in order for the display to use the NSL protocol.</p>	0 = NSL Protocol Disabled 1 = NSL Protocol Enabled	0	
16	<p>Digit Add Assignment for SLT Assign up to four digits in front of the station number sent to the Special SLT Port when a call is forwarded. Assign the leading digits (up to 4) to show in front of extension numbers on forwarded calls sent to analog ports defined as "1" in Program 15-03-16 (Special DTMF Protocol Sent). If this entry is blank and Program 15-03-16 is enabled, the protocol will only include the extension number. (<i>Entries: 0 - 9, # *</i>)</p>	Dial (Up to 4 Digits)	No Setting	15-03-16

Program 45 : Voice Mail Integration

45-03 : NSL Timer Setup

- For Your Notes -

Program 47 : IntraMail

47-01 : IntraMail System Options

Level:

IN

Feature Availability

- Available.

Description

Use **Program 47-01 : IntraMail System Options** to set up the IntraMail system-wide options.

Input Data

Item No.	Item	Input Data	Default
01	- <i>Not Used</i> - (Use Program 47-01-17 to enable IntraMail)	-	-
02	IntraMail Master Name (MasterName) Use this option to modify the name for all IntraMail ports. The UX5000 briefly displays this name when a display keyset user calls a Voice Mail port (either by pressing MSG , their voice mail key, or by dialing the master number). You should always end the name with the ## characters. The UX5000 substitutes the port number for the last #. Using the default name <i>IntraMail ##</i> for example, the keyset display shows <i>IntraMail #1</i> when calling port 1.	Up to 12 Characters	IntraMail ## (The UX5000 substitutes the port number for the # when calling the port).
03	Subscriber Message Length (Subs Msg Length) Use this option to set the maximum length of recorded messages of incoming calls for: <ul style="list-style-type: none"> • Conversation Record • Extension users leaving a message in a Subscriber Mailbox • Outside Automated Attendant callers accessing a mailbox via a LOGON command and then dialing RS to record and send a message. • Subscriber Mailbox users dialing RS to record and send a message. • Automated Attendant callers leaving a message or Quick Message in a Subscriber Mailbox. • Outside callers transferred by an extension user to a Subscriber Mailbox. <p>Note: The length of a Conversation Record is 10 times the <i>Subscriber Message Length</i>. Since the Conversation Record time cannot exceed 4095 seconds, any settings in <i>Subscriber Message Length</i> larger than 409 has no effect on the length of recorded conversations.</p>	1-4095 seconds	120 seconds

Program 47 : IntraMail

47-01 : IntraMail System Options

04	<p>Non-Subscriber Message Length (Mbox Msg Length)</p> <p>Use this option to set the maximum length of outgoing recorded messages for:</p> <ul style="list-style-type: none"> • Announcement Mailbox Messages • Call Routing Mailbox Instruction Menus • Directory Dialing Messages • Greetings for Subscriber Mailboxes • Message On Hold 	1-4095 seconds	120 seconds
05	<p>Message Backup/Go Ahead Time (Msg Bkup/Adv Time)</p> <p>Use this option to set the backup/go ahead interval. This interval sets how far IntraMail backs up when a user dials B while listening to a message. This interval also sets how far IntraMail jumps ahead when a user dials G while listening to a message.</p>	1-60 Seconds	5 Seconds
06	- Not Used -	-	-
07	<p>Digital Pager Callback Number (Pager CBack)</p> <p>Use this option to set the <i>Digital Pager Callback Number</i> portion of the Message Notification callout number for a digital pager. This is the portion of the callout number that is appended to the pager service telephone number. Normally, this option should be X*M#, where:</p> <ul style="list-style-type: none"> • X is the number of the extension that generated the notification. • * is a visual delimiter (to make the pager display easier to read). • M is the number of new messages in the extension's mailbox. • # is the digit normally used by the pager service for positive disconnect. 	<p>Digits (12 maximum, using 0-9, # and *)</p> <p>M (Number of messages - entered by pressing LK1)</p> <p>No entry (Entered by pressing CLEAR).</p> <p>X (Extension number - entered by pressing LK2)</p> <p>IntraMail automatically replaces the X command with the number of the extension that initially received the message.</p>	X*M#

Program 47 : IntraMail

47-01 : IntraMail System Options

08	<p>Delay in Dialing Digital Pager Callback Number (Pager Dial Delay)</p> <p>Use this option to set the delay (0-99 seconds) that occurs just before IntraMail dials the <i>Digital Pager Callback Number</i> portion of the Message Notification callout number for a digital pager. Set this delay so the pager service has enough time to connect to the digital pager before sending the callback number. Your pager service may be able to help you determine the best value for this option (0-99 seconds). By default, this option is 9 seconds. When placing a digital pager notification, the UX5000:</p> <ol style="list-style-type: none"> 1. Seizes the trunk specified. 2. Dials the user-entered notification number (in MSG + OP + N). 3. Waits the 47-01-08: Delay in Dialing Digital Pager Callback Number interval. 4. Dials the number entered in 47-01-07: Digital Pager Callback Number. <p>The UX5000 assumes that the notification number will complete dialing approximately 4 seconds after trunk seizure. This means that, by default, the Digital Pager Callback Number will be dialed into the pager service about 13 seconds after trunk seizure.</p>	0-99 seconds	9 seconds
09	<p>Wait Between Digital Pager Callout Attempts (Notify Pager Intvl)</p> <p>Use this option to set the minimum time (1-255 minutes) between unacknowledged or unanswered digital pager Message Notification callouts. (A subscriber acknowledges a digital pager notification by logging onto their mailbox.) After this interval expires, IntraMail will try the callout again (for up to the number of times set in 47-01-14: Number of Callout Attempts).</p> <p>If the UX5000 dials the callout number and the pager service is busy, it will retry the number in one minute.</p>	1-255 minutes	15 minutes
10	<p>Wait Between Non-Pager Callout Attempts (Notify N-Pgr Intvl)</p> <p>Use this option to set the minimum time (1-255 minutes) between non-pager Message Notification callouts in which the destination answers, says "Hello," dials 1 to acknowledge and then enters the wrong security code.</p>	1-255 minutes	20 minutes
11	<p>Wait Between Busy Non-Pager Callout Attempts (Notify Busy Intvl)</p> <p>Use this option to set how long IntraMail will wait (1-255 minutes), after it dials a busy non-pager callout destination, before retrying the callout number.</p>	1-255 minutes	15 minutes

Program 47 : IntraMail

47-01 : IntraMail System Options

12	<p>Wait Between RNA Non-Pager Callout Attempts (Notify RNA Intvl) Use this option to set how long IntraMail will wait (1-255 minutes), after it dials an unanswered non-pager callout destination, before retrying the callout number.</p> <p>There are three types of unanswered non-pager callouts:</p> <ul style="list-style-type: none"> • If the callout rings the destination longer than the 47-01-13: Wait for Answer Non-Pager Callout Attempts option. • If the destination answers, says “Hello” (or the UX5000 detects answer supervision) and then hangs up without dialing 1 to log onto their mailbox. This typically happens if someone unfamiliar with notification answers the callout, or if the callout is picked up by an answering machine. • If the destination answers and then hangs up without saying “Hello.” This typically happens if someone unfamiliar with the notification answers the callout (like the above example), or if the call is picked up by an answering machine with insufficient outgoing message volume. 	1-255 minutes	30 minutes
13	<p>Wait for Answer Non-Pager Callout Attempts (Notify RNA Rings) If a non-pager callout rings the destination longer than this interval (1-99 rings), IntraMail marks the call as unanswered (Ring No Answer) and hangs up.</p>	1-99 rings	5 rings
14	<p>Number of Callout Attempts (Notify Call Attmpt) Use this option to set how many times (1-99 attempts) IntraMail will retry an incomplete Message Notification callout. This total includes unacknowledged callouts, callouts to a busy destination, and callouts to an unanswered destination. This option applies to pager and non-pager callouts.</p>	1-99 attempts	5 attempts
15	<p>Send Pager Callout Until Acknowledged (Retry Until Ack) When this option is enabled (1), IntraMail will continue to retry a digital pager Message Notification callout until the notification is acknowledged. If this option is disabled (0), IntraMail will retry a digital pager Message Notification the number of times specified in 8004-Number of Callout Attempts. This option does not apply to Message Notification callouts to telephone numbers.</p> <p>A digital pager notification is considered acknowledged when the recipient logs onto the mailbox.</p>	1 = Enabled 0 = Disabled	0 (Disabled)
16	<p>Name Format Use this option to determine how extension names should be entered in 15-01-01 : Basic Extension Data Setup - Extension Name or via the terminal.</p>	0 = First / Last 1 = Last / First	0

Program 47 : IntraMail

47-01 : IntraMail System Options

17	Start of IntraMail Port Use this option to set the IntraMail starting port number. <ul style="list-style-type: none">• This must be an unassigned port.• To avoid conflicts, you should use the last 16 ports for IntraMail. The assignment in this option is the first (lowest numbered) of those last 16 ports.<ul style="list-style-type: none">- For example, in a 64-port UX5000 consider starting at port 49.• Note that UX5000 licensing determines the number of available ports.	Any valid and licensed extension number available in the UX5000 (0 = Disabled)	0

Program 47 : IntraMail

47-02: IntraMail Station Mailbox Options

Level:	Feature Availability
IN	<ul style="list-style-type: none"> Available.

Description

Use **47-02: IntraMail Station Mailbox Options** to set up a station's (extension's) mailbox. Station mailboxes are automatically assigned as Subscriber Mailboxes. NormaStation Mailboxes can be either Personal or Group.

Station Mailboxes are one of three mailbox categories: Station, Routing, and Master. You can also set up Master Mailboxes as Subscriber Mailboxes.

Input Data

Item No.	Item	Input Data	Default
01	<p>Mailbox Active (Mailbox Active) Use this option to select the type of mailbox assigned to an extension - none, personal, or group.</p> <p>A Personal Mailbox (1) is used by one specific person. Messages left in the mailbox are only listened to and/or deleted by the particular user.</p> <p>A Group Mailbox (2), is shared by a group of co-workers. If a caller leaves a message at any extension within the group that shares th mailbox, the UX5000 stores the message in the shared Group mailbox. All extensions in the group will receive an indication of the new message.and any group member will be able to log onto their mailbox to hear and process the shared message.</p> <p>Selecting None (0), prevents access to an extension's mailbox, even though its stored messages and configuration are retained in memory. If disabled, a user pressing MSG will initiate a remote logon and be asked to enter their mailbox number. A voice prompt then announces, "That mailbox does not exist."</p> <p>To make programming easier, consider associating a mailbox number with a station port. For example, mailbox 1 could correspond to port 1, which in turn corresponds to extension 301.</p>	<p>0 = None 1 = Personal 2 = Group</p>	<p>Mailboxes 1-64 = 1 (Personal)</p> <p>All other mailboxes = 0 (None)</p>
02	<p>Mailbox Number (Mailbox Number) Use this option to select the extension number associated with the mailbox you are programming. Normally, mailbox 1 should use Mailbox Number 301, mailbox 2 should use Mailbox Number 302, etc.</p> <p>To make programming easier, consider associating a mailbox number with a station port. For example, mailbox 1 could correspond to port 1, which in turn corresponds to extension 301.</p>	<p>Digits (8 maximum, using 0-9)</p>	<p>Mailboxes 1-64 = 301-364. .</p> <p>For all other mailboxes, there is no entry.</p>

Program 47 : IntraMail

47-02: IntraMail Station Mailbox Options

03	<p>Number of Messages (Number of Messages)</p> <p>Use this option to set the maximum number of messages that can be left in the Subscriber Mailbox. If a caller tries to leave a message once this limit is reached, they hear, <i>“That mailbox is full.”</i> IntraMail then hangs up.</p>	<p>0-99 messages</p> <ul style="list-style-type: none"> To conserve storage space, enter 0 for all unused mailboxes. 	<p>99 messages for mailbox 1.</p> <p>20 messages for all other mailboxes.</p>
04	<p>Message Playback (Message Playback)</p> <p>Use this option to set the Subscriber Mailbox message playback order. When a subscriber listens to their messages, IntraMail can play the oldest messages first (first-in-first-out, or FIFO), or the newest messages first (last-in-first-out, or LIFO).</p>	<p>0 (FIFO - first-in-first-out, or oldest messages first). 1 (LIFO - last-in-first-out, or newest messages first).</p>	<p>0 (FIFO - first-in-first-out, or oldest messages first)</p>
05	<p>Auto Erase/Save of Messages (Auto Erase/Save)</p> <p>Use this option to determine what happens when a Subscriber Mailbox user completely listens to a new message and then exits their mailbox without either saving (SA) or erasing (E) the message. Depending on the setting of this option, IntraMail will either automatically save or erase the message. If the mailbox user hangs up before listening to the <i>entire</i> new message, IntraMail retains the message as a new message.</p>	<p>0 (Erase)</p> <ul style="list-style-type: none"> After the subscriber listens to the entire new message and hangs up, IntraMail erases the message. <p>1 (Save)</p> <ul style="list-style-type: none"> After the subscriber listens to the entire new message and hangs up, IntraMail saves the message. 	<p>1 (Save)</p>
06	<p>Message Retention (Message Retention)</p> <p>Use this option to determine how long a Subscriber Mailbox will retain held and saved messages. If a message is left in a Subscriber Mailbox longer than this interval, IntraMail deletes it.</p>	<p>1-90 days 0 (Indefinite)</p>	<p>0 (Indefinite)</p>
07	<p>Recording Conversation Beep (Rec Conv Beep)</p> <p>Use this option to enable or disable the Conversation Record beep. If enabled, all parties on a call will hear the voice prompt <i>Recording</i> followed by a single beep when the extension user initiates Conversation Record. If disabled, the voice prompt and beep will not occur. When you disable the Conversation Record beep, the following voice prompts do not occur while IntraMail records the conversation:</p> <p><i>“Recording” (followed by a beep)</i> <i>“That mailbox is full” (if the mailbox message storage capacity is reached)</i> <i>“You have reached the recording limit” (if the recorded message is too long)</i></p> <p>The UX5000 software provides an additional Conversation Record beep. This beep repeats according to the setting of Program 45-01-06: Voice Mail Integration Options: Record Alert Tone Interval Time (0-64800 seconds). To disable the UX5000 Conversation Record beep, enter 0 for this option.</p>	<p>1 (Yes - enabled) 0 (No - disabled)</p>	<p>1 (Yes - enabled)</p>

Program 47 : IntraMail

47-02: IntraMail Station Mailbox Options

08	<p>Message Waiting Lamp (Update MW Lamp) Use this option to enable or disable Message Waiting lamping at the extension associated with the Subscriber mailbox. For Subscriber Mailboxes, you should leave this option enabled. For Guest Mailboxes, you should leave this option disabled.</p>	<p>1 (Yes - enabled) 0 (No - disabled)</p>	<p>1 (Yes - enabled)</p>
09	<p>Auto Attendant Do Not Disturb (Auto-ATT DND) Use this option to enable or disable Auto Attendant Do Not Disturb. When a subscriber enables Auto Attendant Do Not Disturb, an Automated Attendant caller will route directly to the mailbox, hear the greeting, and be asked to leave a message.</p>	<p>1 (Yes - enabled) 0 (No - disabled)</p>	<p>0 (No - disabled)</p>
10	<p>Forced Unscreened Transfer (Forced UTRF) Use this option to enable or disable Automated Attendant Forced Unscreened Transfer for the Subscriber Mailbox. If enabled, each Screened Transfer (TRF) to the extension is converted to an Unscreened Transfer (UTRF). If disabled, Screened Transfers from the Automated Attendant occur normally.</p>	<p>1 (Yes - enabled) 0 (No - disabled)</p>	<p>0 (No - disabled)</p>
11	<p>Auto Time Stamp (Auto Time Stamp) Use this option to enable or disable Auto Time Stamp for the Subscriber Mailbox. If enabled, after the subscriber listens to a message IntraMail will announce the time and date the message was left. Auto Time Stamp will also announce the message sender (if known). A subscriber can also enable Auto Time Stamp from their mailbox.</p>	<p>1 (Yes - enabled) 0 (No - disabled)</p>	<p>0 (No - disabled)</p>
12	<p>System Administrator (System Admin) Use this option to designate the Subscriber Mailbox as a System Administrator. This allows the subscriber to use the SA options after logging onto their mailbox.</p>	<p>1 (Yes - enabled) 0 (No - disabled)</p>	<p>Mailbox 1 (301) = Enabled (1) All other mailboxes = Disabled (0)</p>
13	<p>Dialing Option (Dialing Option) Dialing Option provides additional dialing options for Next Call Routing Mailbox calls (see <i>Next Call Routing Mailbox</i> below). If enabled, a caller who accesses the Subscriber Mailbox to leave a message can dial any of the options in the Next Call Routing Mailbox's Dial Action Table. If disabled, the caller can only dial 0 (to use the Next Call Routing Mailbox's 0 action).</p>	<p>1 (Yes - enabled) 0 (No - disabled)</p>	<p>0 (No - disabled)</p>

Program 47 : IntraMail

47-02: IntraMail Station Mailbox Options

14	<p>Next Call Routing Mailbox (Next CR Mbox)</p> <p>Use this option to assign a Next Call Routing Mailbox to the Subscriber Mailbox. This provides callers with additional dialing options while listening to a Subscriber Mailbox recorded or default greeting. The digits the caller can dial depends on the setting of the Next Call Routing Mailbox and Alternate Next Call Routing Mailbox options.</p>	<p>0-32 (0=Undefined)</p>	<p>1 (Call Routing Mailbox 01)</p> <ul style="list-style-type: none"> • By default, Call Routing Mailbox numbers are 01-08.
15	<p>Directory List (Directory List Num)</p> <p>Use this option to specify the Directory List to which the Subscriber Mailbox belongs. When setting up Directory Dialing Mailboxes, you must specify which Directory List you want the Directory Dialing Mailbox to use. The Directory Dialing Mailbox can only call Subscriber Mailboxes that belong to the list it is programmed to use.</p>	<p>1-8 (lists 1-8) 0 (belongs to no lists) * (belongs to all lists)</p>	0 (No entry)
16	<p>Voice Prompt Language (Lang)</p> <p>Use this option to set the voice prompt language for the station mailbox. The languages that are available to the station mailbox depend on the UX5000's language licensing set in Program 47-16-01 : Language List Assignments.</p>	<p>01=US English 02=UK English 03=Australian English 04=French Canadian 05=Dutch 06=Mexican Spanish 07=Latin America Spanish 08=Italian 09=German 10=Madrid Spanish 11=Norwegian 12=Parisian French 13=Brazilian Portuguese 14=Japanese 15=Mandarin Chinese 16=Korean 17=Reserved 18=Reserved 19=Reserved 20=Flexible</p>	1 (US English)
17	<p>Enable Paging [Enable Paging]</p> <p>Use this option to enable or disable the Park and Page option for the mailbox. If enabled, when an outside call can't go through Park and Page automatically parks the call and pages the extension user. This option is the same as the <i>Mailbox Options: Call Options: Paging</i> user setting. The setting you make in this option overrides the <i>Mailbox Options</i> setting and visa-versa.</p>	<p>0=No 1=Yes</p>	0

Program 47 : IntraMail

47-06: Group Subscriber Mailbox Options

Level:
IN

Feature Availability

- Available.

Description

Use **47-06: Group Subscriber Mailbox Options** to set up a Group Mailbox assigned as a Subscriber Mailbox in **47-03-03: Group Mailbox Type**.

Input Data

Group Mailbox Number	01-32
----------------------	-------

Item No.	Item	Input Data	Default
01	<p>Number of Messages (Number of Messages)</p> <p>Use this option to set the maximum number of messages that can be left in the Subscriber Mailbox. If a caller tries to leave a message once this limit is reached, they hear, “<i>That mailbox is full.</i>” IntraMail then hangs up.</p>	<p>0-99 messages</p> <p>To conserve storage space, enter 0 for all unused mailboxes.</p>	20
02	<p>Message Playback Order (Message Playback)</p> <p>Use this option to set the Subscriber Mailbox message playback order. When a subscriber listens to their messages, IntraMail can play the oldest messages first (first-in-first-out, or FIFO), or the newest messages first (last-in-first-out, or LIFO).</p>	<p>0 (FIFO - first-in-first-out, or oldest messages first). 1 (LIFO - last-in-first-out, or newest messages first).</p>	0 (FIFO)
03	<p>Auto Erase/Save of Messages (Auto Erase/Save)</p> <p>Use this option to determine what happens when a Subscriber Mailbox user completely listens to a new message and then exits their mailbox without either saving (SA) or erasing (E) the message. Depending on the setting of this option, IntraMail will either automatically save or erase the message. If the mailbox user hangs up before listening to the <i>entire</i> new message, IntraMail retains the message as a new message.</p>	<p>0 (Erase) After the subscriber listens to the entire new message and hangs up, IntraMail erases the message. 1 (Save) After the subscriber listens to the entire new message and hangs up, IntraMail saves the message.</p>	1 (Save)
04	<p>Message Retention (Message Retention)</p> <p>Use this option to determine how long a Subscriber Mailbox will retain held and saved messages. If a message is left in a Subscriber Mailbox longer than this interval, IntraMail deletes it.</p>	<p>1-90 days 0 (Indefinite)</p>	0 (Indefinite)

Program 47 : IntraMail

47-06: Group Subscriber Mailbox Options

05	<p>Recording Conversation Beep (Rec Conv Beep)</p> <p>Use this option to enable or disable the Conversation Record beep. If enabled, all parties on a call will hear the voice prompt <i>Recording</i> followed by a single beep when the extension user initiates Conversation Record. If disabled, the voice prompt and beep will not occur. When you disable the Conversation Record beep, the following voice prompts do not occur while IntraMail records the conversation:</p> <p style="padding-left: 40px;"><i>“Recording” (followed by a beep)</i></p> <p style="padding-left: 40px;"><i>“That mailbox is full” (if the mailbox message storage capacity is reached)</i></p> <p style="padding-left: 40px;"><i>“You have reached the recording limit” (if the recorded message is too long)</i></p> <p>The UX5000 software provides an additional Conversation Record beep. This beep repeats according to the setting of Program 45-01-06: Voice Mail Integration Options: Record Alert Tone Interval Time (0-64800 seconds). To disable the UX5000 Conversation Record beep, enter 0 for this option.</p>	<p>1 (Yes - enabled) 0 (No - disabled)</p>	<p>1 (Yes - enabled)</p>
06	<p>Message Waiting Lamp (Update MW Lamp)</p> <p>Use this option to enable or disable Message Waiting lamping at the extension associated with the Subscriber mailbox. For Subscriber Mailboxes, you should leave this option enabled. For Guest Mailboxes, you should leave this option disabled.</p>	<p>1 (Yes - enabled) 0 (No - disabled)</p>	<p>1 (Yes - enabled)</p>
07	<p>Auto Attendant Direct to Voice Mail (Auto-ATT Direct VM)</p> <p>Use this option to enable or disable Auto Attendant Direct to Voice Mail. When a subscriber enables Auto Attendant Direct to Voice Mail, an Automated Attendant caller will route directly to the mailbox, hear the greeting, and be asked to leave a message.</p>	<p>1 (Yes - enabled) 0 (No - disabled)</p>	<p>0 (No - disabled)</p>
08	<p>Forced Unscreened Transfer (Forced UTRF)</p> <p>Use this option to enable or disable Automated Attendant Forced Unscreened Transfer for the Subscriber Mailbox. If enabled, each Screened Transfer (TRF) to the extension is converted to an Unscreened Transfer (UTRF). If disabled, Screened Transfers from the Automated Attendant occur normally.</p>	<p>1 (Yes - enabled) 0 (No - disabled)</p>	<p>0 (No - disabled)</p>
09	<p>Auto Time Stamp (Auto Time Stamp)</p> <p>Use this option to enable or disable Auto Time Stamp for the Subscriber Mailbox. If enabled, after the subscriber listens to a message IntraMail will announce the time and date the message was left. Auto Time Stamp will also announce the message sender (if known).</p> <p>A subscriber can also enable Auto Time Stamp from their mailbox.</p>	<p>1 (Yes - enabled) 0 (No - disabled)</p>	<p>0 (No - disabled)</p>

Program 47 : IntraMail

47-06: Group Subscriber Mailbox Options

10	<p>System Administrator (System Admin)</p> <p>Use this option to designate the Subscriber Mailbox as a System Administrator. This allows the subscriber to use the SA options after logging onto their mailbox.</p>	<p>1 (Yes - enabled) 0 (No - disabled)</p>	<p>0 (No - disabled)</p>
11	<p>Dialing Option (Dialing Option)</p> <p>Dialing Option provides additional dialing options for Next Call Routing Mailbox calls (see <i>Next Call Routing Mailbox</i> below). If enabled, a caller who accesses the Subscriber Mailbox to leave a message can dial any of the options in the Next Call Routing Mailbox's Dial Action Table. If disabled, the caller can only dial 0 (to use the Next Call Routing Mailbox's 0 action).</p>	<p>1 (Yes - enabled) 0 (No - disabled)</p>	<p>0 (No - disabled)</p>
12	<p>Next Call Routing Mailbox (Next CR Mbox)</p> <p>Use this option to assign a Next Call Routing Mailbox to the Subscriber Mailbox. This provides callers with additional dialing options while listening to a Subscriber Mailbox recorded or default greeting. The digits the caller can dial depends on the setting of the Next Call Routing Mailbox and Alternate Next Call Routing Mailbox options.</p>	<p>0 - 32 (1-32 = Call Routing Mailbox Number, 0 = Undefined)</p>	<p>1 (Call Routing Mailbox 01) By default, Call Routing Mailbox numbers are 1=8.</p>
13	<p>Directory List</p> <p>Use this option to specify the Directory List to which the Subscriber Mailbox belongs. When setting up Directory Dialing Mailboxes, you must specify which Directory List you want the Directory Dialing Mailbox to use. The Directory Dialing Mailbox can only call Subscriber Mailboxes that belong to the list it is programmed to use.</p>	<p>1-8 (lists 1-8) 0 (belongs to no lists) * (belongs to all lists)</p>	<p>0 (No entry)</p>
14	<p>Voice Prompt Language [Lang]</p> <p>Use this option to set the voice prompt language for the Group Mailbox. The languages that are available to the mailbox depend on the UX5000's language licensing set in Program 47-16-01 : Language List Assignments.</p>	<p>01=US English 02=UK English 03=Australian English 04=French Canadian 05=Dutch 06=Mexican Spanish 07=Latin America Spanish 08=Italian 09=German 10=Madrid Spanish 11=Norwegian 12=Parisian French 13=Brazilian Portuguese 14=Japanese 15=Mandarin Chinese 16=Korean 17=Reserved 18=Reserved 19=Reserved 20=Flexible</p>	<p>1</p>

Program 47 : IntraMail

47-06: Group Subscriber Mailbox Options

15	<p>Enable Paging [Enable Paging]</p> <p>Use this option to enable or disable the Park and Page option for the mailbox. If enabled, when an outside call can't go through Park and Page automatically parks the call and pages the extension user. This option is the same as the <i>Mailbox Options: Call Options: Paging</i> user setting. The setting you make in this option overrides the <i>Mailbox Options</i> setting and visa-versa.</p>	0=No 1=Yes	0
16	<p>Paging Option [Paging Option]</p> <p>When Automated Attendant Direct to Voice Mail is enabled, use this option to set how Park and Page will intercept calls. It can intercept calls immediately and do a Park and Page (1), or handle Park and Page like any other transferred outside call (0).</p>	0=RNA 1=Immediate	0
17	<p>Terminal User Interface (User Interface)</p> <p>Use this option to set the IntraMail voice prompt interface type. The options are numeric (0) or mnemonic (1). If set to numeric, voice mail options are announced as digits: "To record and send a message, dial seven seven." If set to mnemonic, voice mail options are announced descriptively: "To record and send a message, dial R S," where R S is a mnemonic representation of Record and Send.</p>	0=.Numeric interface 1=Mnemonic interface 2=.Octel (Not Used)	1
18	<p>Enable Email Notification (Enable Email)</p>	0=No 1=Yes	0

Program 47 : IntraMail

47-08: Call Routing Mailbox Options

Level:

IN

Feature Availability

- Available.

Description

Use **47-08: Call Routing Mailbox Options** to set the options for mailboxes assigned as Call Routing Mailboxes in **47-07-02: Routing Mailbox Type**.

Input Data

Routing Mailbox Number	01-32
------------------------	-------

Item No.	Item	Input Data	Default
01	<p>Dial Action Table (Dial Action Table)</p> <p>Use this option to assign the Dial Action Table to the Call Routing Mailbox. The Dial Action Table defines the dialing options for the call Routing Mailbox</p>	1-16 (Dial Action Table 1-16)	1 (Dial Action Table 1)
02	<p>Screened Transfer Timeout (Scrn Trf Timeout)</p> <p>Use this option to set how long a Screened Transfer (TRF) from the Automated Attendant will ring an unanswered extension before recalling.</p>	0-255 seconds Entering 0 causes immediate recall.	15 seconds
03	<p>Time Limit for Dialing Commands (Dialing Timeout)</p> <p>This option determines how long IntraMail will wait for an Automated Attendant caller to dial before routing the call to the Timeout destination.</p> <p><i>Be sure your Dial Action Tables have a Timeout action programmed.</i></p> <p>If the caller waits too long to dial: <i>When the associated Dial Action Table has a Timeout action programmed, the caller routes to that destination.</i> <i>When the associated Dial Action Table does not have a Timeout action programmed, the Instruction Menu repeats 3 times and then IntraMail hangs up.</i></p>	0-99 seconds Entering 0 causes the Automated Attendant to immediately route callers to the Timeout destination programmed in the active Dial Action Table.	5 seconds
04	<p>Fax Detection (Fax Detection)</p> <p>Use this option to enable or disable Fax Detection for the Call Routing Mailbox. In enabled, the IntraMail Automated Attendant (when using this Call Routing Mailbox) will detect incoming fax CNG tone. The fax call will then route to the company fax machine according to the setting of 47-08-05 : Fax Extension. If disabled, the Automated Attendant will not detect incoming fax calls.</p>	1 (Yes - enabled) 0 (No - disabled)	0 (No - disabled)

Program 47 : IntraMail

Feature Availability

- Available.

Description

Use **47-12: IntraMail Answer Schedules** to set up the IntraMail Automated Attendant Answer Schedules. There are eight Answer Tables, with up to 10 Answer Schedules in each Answer Table.

Input Data

Answer Table Number	1-8
Schedule Entry Number	01-10

Item No.	Item	Input Data	Default
01	<p>Schedule Type (Entryxx Schedule Type) Use this option to assign a Schedule Type to the selected Answer Schedule. The Schedule Type determines how the Answer Schedule answers calls.</p> <p>The schedule can be one of the following types:</p> <ul style="list-style-type: none"> • 1. Day of the Week A Type 1 Answer Schedule runs on a specific day of the week. For this type of schedule, you select: <ul style="list-style-type: none"> - The day of the week the schedule should run: - The schedule start time. - The schedule end time. - The Call Routing or Announcement Mailbox used to answer calls. • 2. Range of Days A Type 2 Answer Schedule runs for a range of days. For this type of schedule, you select: <ul style="list-style-type: none"> - The day of the week the schedule should start. - The day of the week the schedule should stop. - The time on the start day the schedule should start. - The time on the stop day the schedule should stop. - The Call Routing or Announcement Mailbox used to answer the calls. • 3. Date A type 3 Answer Schedule runs only on a specific day of the year. For this type of schedule, you select: <ul style="list-style-type: none"> - The specific date the schedule should run. - On the selected date, the time the schedule should start. - On the selected date, the time the schedule should stop. - The Call Routing or Announcement Mailbox used to answer the calls. 	<p>1 (Day of the Week) 2 (Range of Days) 3 (Date) 0 (Undefined)</p>	<p>AnswerTable 1/Schedule 1 = 2 (Range of Days) All other schedules = 0 (Undefined)</p>

Program 47 : IntraMail

47-12: IntraMail Answer Schedules

02	<p>Answering Mailbox Category (Entryxx MB Ctg)</p> <p>Use this option to specify the category of mailbox to which Automated Attendant calls should route when the schedule is in effect. IntraMail mailbox categories are Station Mailbox (refer to Program 47-02), Group Mailbox (refer to Program 47-03), and Routing Mailbox (refer to Program 47-07).</p> <p>IntraMail handles the routing according to the exact type of Subscriber, Master, or Routing Mailbox specified.</p> <ul style="list-style-type: none"> • <i>If the Answering Mailbox is a Subscriber Mailbox, the outside caller hears the mailbox greeting (if recorded) and can leave a message.</i> • <i>If the Answering Mailbox is an Announcement Mailbox, the outside caller will hear the recorded announcement. Depending on how the Announcement Mailbox is programmed, IntraMail will then hang up, reroute the call, or provide additional dialing options.</i> • <i>If the Answering Mailbox is a Call Routing Mailbox, the outside caller will hear the instruction menu and can dial any options allowed by the associated Dial Action Table.</i> • <i>If the Answering Mailbox is a Directory Dialing Mailbox, the outside caller will hear the Directory Dialing Message and can reach an extension by dialing the first few letters of the person's name.</i> • <i>If the Answering Mailbox is a Distribution Mailbox, the outside caller hears the mailbox greeting (if recorded) and can leave a message.</i> 	<p>1 (Subscriber Mailbox) 2 (Master Mailbox) 3 (Routing Mailbox) 0 (Undefined)</p>	<p>0 (Undefined)</p>
	<p>Answering Mailbox Number (Entryxx MB Num)</p> <p>Use this option to set the number of the Answering Mailbox the Automated Attendant uses when the selected schedule is in effect. This mailbox is defined in 47-12-02: Answering Mailbox Category.</p>	<p>Digits (3 maximum, using 0-9)</p>	<p>AnswerTable 1/Schedule 1 = 1 All other Answer Schedules = No entry</p>
03	<p>Day of the Week (Entryxx Day)</p> <p>For Day of the Week (Type 1) Answer Schedules, use this option to select the day of the week the Answer Schedule should be active.</p>	<p>1 (Sunday) 2 (Monday) 3 (Tuesday) 4 (Wednesday) 5 (Thursday) 6 (Friday) 7 (Saturday)</p>	<p>1 (Sunday)</p>
04	<p>Start Day (Entryxx Start Day)</p> <p>For Range of Days (Type 2) Answer Schedules, use this option to select the day of the week the Answer Schedule should start.</p>	<p>1 (Sunday) 2 (Monday) 3 (Tuesday) 4 (Wednesday) 5 (Thursday) 6 (Friday) 7 (Saturday)</p>	<p>1 (Sunday) Answer Table 1/ Schedule 1 = 2 (Monday) All other schedules = 1 (Sunday)</p>

Program 47 : IntraMail

47-12: IntraMail Answer Schedules

05	<p>End Day (Entryxx End Day) For Range of Days (Type 2) Answer Schedules, use this option to select the day of the week the Answer Schedule should end.</p>	<p>1 (Sunday) 2 (Monday) 3 (Tuesday) 4 (Wednesday) 5 (Thursday) 6 (Friday) 7 (Saturday)</p>	<p>Answer Table 1/Schedule 1 = 6 (Friday) All other Answer Schedules = 1 (Sunday)</p>
06	<p>Date (Entryxx Date) For Date (Type 3) Answer Schedules, use this option to select the date the Answer Schedule should be active.</p>	<p>MMDD For example: - 0101 = January 1 - 1231 = December 31 - 0000 = No date set</p>	<p>0000 = No date set</p>
07	<p>Schedule Start Time (Entryxx Start Time) Use this option to specify the time the Answer Schedule should start. It applies to Day of the Week (Type 1), Range of Days (Type 2), and Date (Type 3) schedules. (To make a schedule run continuously, make the same entry for 47-12-07: Schedule Start Time and 47-12-08: Schedule End Time.)</p>	<p>HHMM (24-hour clock) For example: - 0130 = 1:30AM - 1700 = 5:00PM</p>	<p>Answer Table 1/Schedule 1 = 08:30 (8:30AM) All other schedules are undefined.</p>
08	<p>Schedule End Time (Entryxx End Time) Use this option to specify the time the Answer Schedule should end. It applies to Day of the Week (Type 1), Range of Days (Type 2), and Date (Type 3) schedules. (To make a schedule run continuously, make the same entry for 47-12-07: Schedule Start Time and 47-12-08: Schedule End Time.)</p>	<p>HHMM (24-hour clock) For example: - 0130 = 1:30AM - 1700 = 5:00PM</p>	<p>Answer Table 1/Schedule 1 = 1700 (5:00PM). All other schedules = 0000 (Undefined).</p>

Type 1 (Day of the Week) Answer Schedule Options

Type 1 (Day of Week) Example

In this example, Answer Table 1 routes calls as follows:

Schedule 1 uses Routing Mailbox 2 and runs Sunday from 8:30AM to 5:00PM.

Schedule 2 uses Subscriber Mailbox 3 and runs Wednesday from 10:30AM to 5:00PM.

Schedule 3 uses Routing Mailbox 4 and runs Tuesday from 9:00AM to 10:00AM.

*At all other times, routing is handled by the Default Mailbox specified in **47-11-03:***

Default Mailbox Category and 47-11-03: Default Mailbox Number.

When setting up Answer Tables with multiple types, build the Answer Schedules in the following order:

Range of Days

Day of Week

Date

Program 47 : IntraMail

47-12: IntraMail Answer Schedules

Type 1 (Day of Week) Example	
Answer Table 1	
Answer Schedule 1 Answer Schedule 1 is a Day of Week schedule that runs Sunday from 8:30AM to 5:00PM.	
	47-12-01: Entry01 Schedule Type = 1

	47-12-03: Entry01 Day = 1
	47-12-04: Entry01 Start Day = 1 (Entry doesn't matter)
	47-12-05: Entry01 End Day = 1 (Entry doesn't matter)
	47-12-06: Entry01 Date (MMDD) = 0000 (Entry doesn't matter)
	47-12-07: Entry01 Start Time = 0830 (8:30AM)
	47-12-08: Entry01 End Time = 1700 (5:00PM)
Answer Schedule 2 Answer Schedule 2 is a Day of Week schedule that runs Wednesday from 10:30AM to 5:00PM.	
	47-12-01: Entry01 Schedule Type = 1
	47-12-02: Entry01 MB Ctg = 1 47-12-02: Entry01 MB Num = 3
	47-12-03: Entry01 Day = 4
	47-12-04: Entry01 Start Day = 1 (Entry doesn't matter)
	47-12-05: Entry01 End Day = 1 (Entry doesn't matter)
	47-12-06: Entry01 Date (MMDD) = 0000 (Entry doesn't matter)
	47-12-07: Entry01 Start Time = 1030 (10:30AM)
	47-12-08: Entry01 End Time = 1700 (5:00PM)
Answer Schedule 3 Answer Schedule 3 is a Day of Week schedule that runs Tuesday from 9:00AM to 10:00AM.	
	47-12-01: Entry01 Schedule Type = 1
	47-12-02: Entry01 MB Ctg = 3 47-12-02: Entry01 MB num = 4
	47-12-03: Entry01 Day = 3
	47-12-04: Entry01 Start Day = 1 (Entry doesn't matter)
	47-12-05: Entry01 End Day = 1 (Entry doesn't matter)
	47-12-06: Entry01 Date (MMDD) = 0000 (Entry doesn't matter)
	47-12-07: Entry01 Start Time = 0900 (9:00AM)
	47-12-08: Entry01 End Time = 1000 (10:00PM)

Program 47 : IntraMail

47-12: IntraMail Answer Schedules

Type 2 (Range of Days) Answer Schedule Options

Type 2 (Range of Days) Example

In this example, Answer Table 1 routes calls as follows:

Schedule 1 uses Routing Mailbox 1 and runs Sunday through Wednesday from 8:30AM to 5:00PM.

Schedule 2 uses Routing Mailbox 2 and runs Thursday and Friday from 11:00AM to 1:00PM.

At all other times, routing is handled by the Default Mailbox specified in 47-11-03: Default Mailbox Category and 47-11-03: Default Mailbox Number.

When setting up Answer Tables with multiple types, build the Answer Schedules in the following order:

Range of Days

Day of Week

Date

Type 2 (Range of Days) Example	
Answer Table 1	
	Answer Schedule 1 Answer Schedule 1 is a Range of Days schedule that starts schedule that runs Sunday through Wednesday from 8:30AM to 5:00PM.
	47-12-01: Entry01 Schedule Type = 2
	47-12-02: Entry01 MB Ctg = 3 47-12-02: Entry01 MB Num = 1
	47-12-03: Entry01 Day = 1 (Entry doesn't matter)
	47-12-04: Entry01 Start Day = 1 (Sunday)
	47-12-05: Entry01 End Day = 4 (Wednesday)
	47-12-06: Entry01 Date (MMDD) = 0000 (Entry doesn't matter)
	47-12-07: Entry01 Start Time = 0830 (8:30AM)
	47-12-08: Entry01 End Time = 1700 (5:00PM)
	Answer Schedule 2 Answer Schedule 2 is a Range of Days schedule that runs Thursday and Friday from 11:00AM to 1:00PM.
	47-12-01: Entry01 Schedule Type = 2
	47-12-02: Entry01 MB Ctg = 3 47-12-02: Entry01 MB Num = 2
	47-12-03: Entry01 Day = 1 (Entry doesn't matter)
	47-12-04: Entry01 Start Day = 4 (Wednesday)
	47-12-05: Entry01 End Day = 5 (Thursday)
	47-12-06: Entry01 Date (MMDD) = 0000 (Entry doesn't matter)
	47-12-07: Entry01 Start Time = 1100 (11:00AM)
	47-12-08: Entry01 End Time = 1300 (1:00PM)

Program 47 : IntraMail

47-12: IntraMail Answer Schedules

Type 3 (Date) Answer Schedule Options

Type 3 (Date) Example

In this example, Answer Table 1 routes calls as follows:

Schedule 1 uses Routing Mailbox 1 and runs every day from 8:30AM to 5:00PM.

Schedule 2 uses Routing Mailbox 9 and runs only on Christmas day from 8:30AM to 5:00PM.

At all other times, routing is handled by the Default Mailbox specified in 47-11-03: Default Mailbox Category and 47-11-03: Default Mailbox Number.

When setting up Answer Tables with multiple types, build the Answer Schedules in the following order:

Range of Days

Day of Week

Date

Type 3 (Date) Example	
Answer Table 1	
	Answer Schedule 1 Answer Schedule 1 is a Range of Days schedule that starts schedule that runs every day from 8:30AM to 5:00PM.
	47-12-01: Entry01 Schedule Type = 2
	47-12-02: Entry01 MB Ctg = 3 47-12-02: Entry01 MB Num = 1
	47-12-03: Entry01 Day = 1 (Entry doesn't matter)
	47-12-04: Entry01 Start Day = 1 (Sunday)
	47-12-05: Entry01 End Day = 1 (Sunday)
	47-12-06: Entry01 Date (MMDD) = 0000 (Entry doesn't matter)
	47-12-07: Entry01 Start Time = 0830 (8:30AM)
	47-12-08: Entry01 End Time = 1700 (5:00PM)
	Answer Schedule 2 Answer Schedule 2 is a Date schedule that runs only on Christmas day from 8:30AM to 5:00PM.
	47-12-01: Entry01 Schedule Type = 3
	47-12-02: Entry01 MB Ctg = 3 47-12-02: Entry01 MB Num = 9
	47-12-03: Entry01 Day = 1 (Entry doesn't matter)
	47-12-04: Entry01 Start Day = 1 (Entry doesn't matter)
	47-12-05: Entry01 End Day = 1 (Entry doesn't matter)
	47-12-06: Entry01 Date (MMDD) = 1225 (December 25, Christmas day)
	47-12-07: Entry01 Start Time = 0830 (8:30AM)
	47-12-08: Entry01 End Time = 1700 (5:00PM)

Program 47 : IntraMail

47-13: IntraMail Dial Action Tables

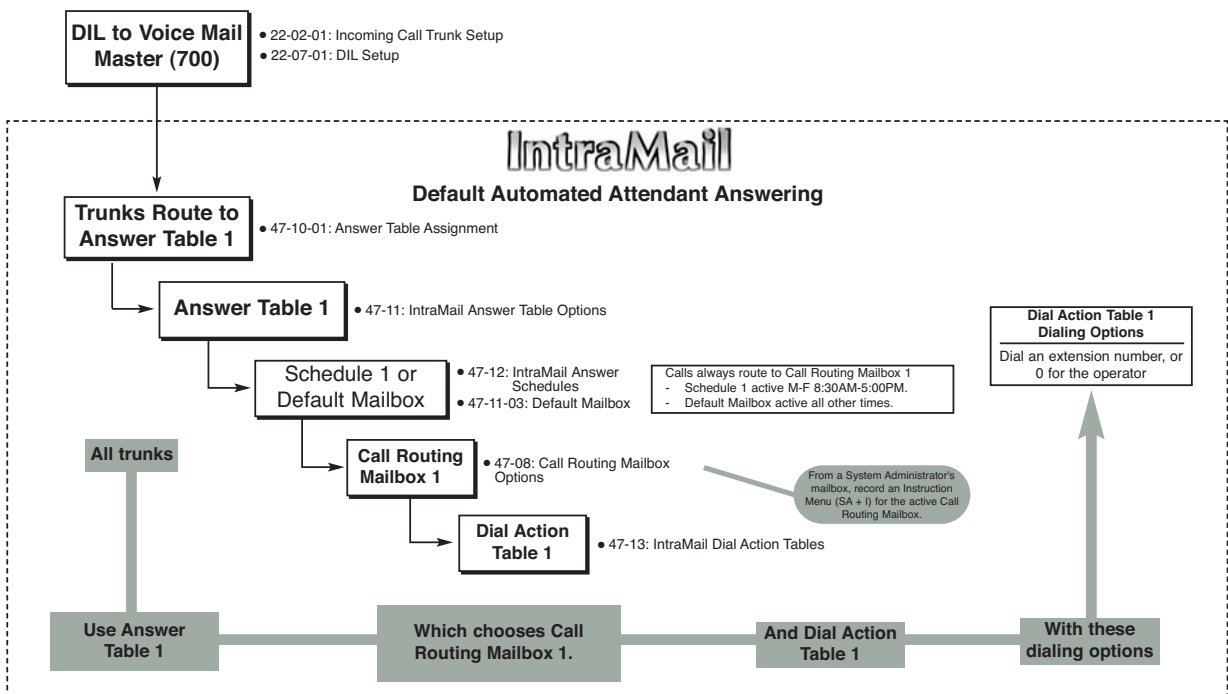

Level:
IN

Feature Availability

- Available.

Description

Use **47-13: IntraMail Dial Action Tables** to set up the IntraMail Dial Action Tables. The Dial Action Table defines the options than an Automated Attendant caller can dial. A Dial Action Table is associated with a Call Routing Mailbox, which is in turn associated with an Answer Table. When an Answer Table is active, its associated Call Routing Mailbox selects the Dial Action Table which provides dialing options to callers. The illustration below shows how this works in a default IntraMail system. There are 16 Dial Action Tables.

Program 47 : IntraMail

47-13: IntraMail Dial Action Tables

Dial Action Table Actions

- **TRF Action - Screened Transfer (1)**
(TRF)

Use this action to allow an Automated Attendant caller to place a Screened Transfer to an extension. After an Automated Attendant caller dials an extension, IntraMail calls (screens) the destination to see if the transfer can go through.

If the destination is available, the Automated Attendant rings it. If the destination answers, the call goes through.

If the destination doesn't answer within a preset interval, is busy, or is in Do Not Disturb, the Automated Attendant doesn't extend the call. It then provides the caller with additional options.

Number Option

Normally, the corresponding Number option should be XXX. Note that the key you choose for this action is the first digit of the called extension number.

- For example, to allow callers to place Screened Transfers to extensions 301-399, for key 3 enter TRF for the *Action* and XXX for the corresponding *Number*.

To have Screened Transfer call a specific extension, the corresponding Number option should be that extension's number. The caller then dials that single digit to reach the extension.

- For example, to have caller's dial 8 to reach extension 303, for key 8 enter TRF for the *Action* and 303 for the corresponding *Number*.

- **UTRF Action - Unscreened Transfer (2)**
(UTRF)

Use this action to allow an Automated Attendant caller to place an Unscreened Transfer to an extension. This is similar to UX5000 unscreened transfers in which the transferring party immediately extends the call. After an Automated Attendant caller dials an extension, IntraMail transfers the call to the destination and hangs up. Any recalls or additional routing are handled by the UX5000 - just as with any other unscreened transfer.

Number Option

Normally, the corresponding Number option should be XXX. Note that the key you choose for this action is the first digit of the called extension number.

- For example, to allow callers to place Unscreened Transfers to extensions 301-399, for key 3 enter UTRF for the *Action* and XXX for the corresponding *Number*.

To have Unscreened Transfer call a specific extension, the corresponding Number option should be that extension's number. The caller then dials that single digit to reach the extension.

- For example, to have caller's dial 8 to reach extension 303, for key 8 enter UTRF for the *Action* and 303 for the corresponding *Number*.

- **REC1 Action - Quick Message With Greeting (3)**
(REC1)

Use this action to allow an Automated Attendant caller to leave a Quick Message at an extension. With this action, the caller *will* hear the extension's greeting prior to leaving the message.

Number Options

To have the caller leave a quick Message at a specific extension, the corresponding Number option should be the extension number.

To have the caller leave a Quick Message at any caller-dialed extension, the corresponding Number option should be IXXX.

To have the caller leave a Quick Message at a caller-dialed extension in a specific range, the corresponding Number option should be XXX.

- For example, to allow callers to leave a Quick Message extensions 301-399, for key 3 enter REC1 for the *Action* and XXX for the corresponding *Number*.

Program 47 : IntraMail

47-13: IntraMail Dial Action Tables

- **REC2 Action - Quick Message Without Greeting (4)**
(REC2)

Use this action to allow an Automated Attendant caller to leave a Quick Message at an extension. With this action, the caller *will not* hear the extension's greeting prior to leaving the message. Instead, the caller hears the voice prompt "Recording" followed by a beep.

Number Option

To have the caller leave a quick Message at a specific extension, the corresponding Number option should be the extension number.

To have the caller leave a Quick Message at any caller-dialed extension, the corresponding Number option should be IXXX.

To have the caller leave a Quick Message at a caller-dialed extension in a specific range, the corresponding Number option should be XXX.

- For example, to allow callers to leave a Quick Message extensions 301-399, for key 3 enter REC2 for the *Action* and XXX for the corresponding *Number*.

- **LOGON Action - Log Onto Voice Mail (5)**
(LOGON)

Use this key action to allow an Automated Attendant caller to log onto Voice Mail. Depending on programming (see *Number Option* below), the caller is logged directly into a Subscriber Mailbox or is prompted to enter a Subscriber Mailbox of their own choosing. **You cannot use the LOGON option with Call Routing and Announcement Mailboxes.**

Number Option

*To log directly into a specific Subscriber Mailbox, enter the **mailbox number** in the corresponding Number option.*

- For example, to have key 4 log directly into Subscriber Mailbox 305, for key 4 enter LOGON for the *Action* and 305 for the corresponding *Number*.

To have IntraMail request Automated Attendant callers to select a Subscriber Mailbox to log into, enter N in the corresponding Number option. The key you choose must represent the first digit in the Subscriber Mailbox numbers.

- For example, to have the Automated Attendant request callers to enter the number of the Subscriber Mailbox into which they wish to log, for key 3 enter LOGON for the *Action* and N for the corresponding *Number*. When callers dial 3, they hear, "Please enter your mailbox number."

*To have IntraMail require Automated Attendant callers to enter a Subscriber Mailbox to log into (without playing an announcement), enter **XXX** in the corresponding Number option. The key you choose must represent the first digit in the Subscriber Mailbox numbers.*

- For example, to allow callers to log onto mailboxes 301-399, for key 3 enter LOGON for the *Action* and XXX for the corresponding *Number*.

*To log into **any** valid Subscriber Mailbox, enter **IXXX** in the corresponding Number option.*

- For example, to allow callers to dial 1 plus any Subscriber Mailbox number to log on, for key 1 enter LOGON for the *Action* and IXXX for the corresponding *Number*.

- **Hang Up Action (6)**
(HNGUP)

When an Automated Attendant caller presses a key assigned to this action, IntraMail says "Goodbye" and immediately hangs up.

Number Option

There is no entry required in the corresponding Number option.

Program 47 : IntraMail

47-13: IntraMail Dial Action Tables

- **GOTO Action - Go to Mailbox (7) (GOTO)**

Use this option to provide Automated Attendant callers with the ability to route to Call Routing and Announcement Mailboxes. For example, a caller can dial a digit for Sales, and then go to the Call Routing or Announcement Mailbox that provides the dialing options and instructions for Sales.

Number Option

*To have Automated Attendant callers dial a single digit to go to a Call Routing or Announcement Mailbox, enter the **mailbox number** in the corresponding Number option.*

- For example, to have key 1 go to Call Routing Mailbox 01, for key 1 enter GOTO for the Action and 01 for the corresponding Number.

*To have IntraMail require Automated Attendant callers to enter a Call Routing or Announcement Mailbox to go to, enter **XXX** in the corresponding Number option. The key you choose must represent the first digit in the mailbox numbers.*

- For example, to allow callers to go to mailboxes 000-015, for key 0 enter GOTO for the Action and XXX for the corresponding Number.

*To log into **any** valid Call Routing or Subscriber Mailbox, enter **IXXX** in the corresponding Number option.*

- For example, to allow callers to dial 1 plus any Call Routing or Announcement Mailbox number to go to, for key 1 enter GOTO for the Action and IXXX for the corresponding Number.

- **UND Action - Undefined Routing (0) (UND)**

Use this key action if you want a key to have no routing (no operation). When an Automated Attendant caller presses an undefined key, they hear, "That is an invalid entry." The caller can then dial another option.

Program 47 : IntraMail

47-13: IntraMail Dial Action Tables

Input Data

Dial Action Table Number	01-16
Key	1-9 = 1-9 10 = 0 11 = * 12 = # 13 = Timeout

Item	Name	Additional Data
01	Dial Action Table Action If Action is set to 0 or 6, the Data setting is skipped.	0=UND Action - Undefined Routing (UND) 1=TRF Action - Screened Transfer (TRF) 2=UTRF Action - Unscreened Transfer (UTRF) 3=REC1 Action - Quick Message With Greeting (REC1) 4=REC2 Action - Quick Message Without Greeting (REC2) 5=LOGON Action - Log Onto Voice Mail (LOGON) 6=Hang Up Action (HNGUP) 7=GOTO Action - Go to Mailbox (GOTO) LK1=Undefined LK2=TRF LK3=UTRF LK4=REC1 LK5=REC2 LK6=LOGON LK7=Hangup
	Data	<ul style="list-style-type: none"> • Digits Entry : 0-9, #, and * (8 digits max.) Use Dial Action Table digits to route an Automated Attendant call to a specific location (such as an extension). For example, to set up a TRF Action to route to extension 305, for digit 3 enter TRF for the <i>Action</i> and 305 for the corresponding <i>Number</i>. • No Routing Entry : N (<i>Entered by pressing LK1</i>) Use the N option when you want no Automated Attendant routing to automatically occur. This can be used with the LOGON action when you want to prompt the caller to enter a mailbox number. To do this for the # key (for example), for the # key enter LOGON for the <i>Action</i> and N for the corresponding <i>Number</i>. When the caller dials #, they hear, "Please enter the mailbox number. Or, to exit, press the pound key." • Caller Dialed Digits Entry : X (<i>Entered by pressing LK2</i>) Use the X option to route an Automated Attendant call based on digits the caller dials. Each X entry represents one caller-dialed digit. For example, to set up a TRF Action to route to any caller dialed extension in the 301-399 range, for digit 3 enter TRF for the <i>Action</i> and XXX for the corresponding <i>Number</i>. • Ignore Digits Entry : I (<i>Entered by pressing LK3</i>) Use the I option to represent any digit dialed by the Automated Attendant caller that IntraMail ignores for routing. An example of this is REC action assigned to the * key in Dial Action Table 1 by default. The <i>Action</i> is REC2 and the <i>Number</i> is IXXX. This means that a caller can dial * + any mailbox number to leave a Quick Message in that mailbox. IntraMail ignores the first digit dialed by the caller (*), and routes according to the next 3 digits dialed. • Pause Entry : P (<i>Entered by pressing LK4</i>) Use the P option when you want the Automated Attendant to pause while dialing. To set the duration of the pause, use 81-01-16: <i>Pause Time</i>. The default for the pause is 75s mS.

Program 47 : IntraMail

Press MIC until you've exited that series's programming section.

Program 47 : IntraMail

47-15 : Routing Directory Mailbox Options

Level:

IN

Feature Availability

- Available.

Description

Use **47-15: Routing Directory Mailbox Options** to set up the Routing Mailbox assigned as a Directory Dialing Mailbox in 47-07-02: Routing Mailbox Type.

Input Data

Item No.	Item	Input Data	Default
01	<p>Minimum Number of Letters Required (Min Num Letters)</p> <p>Use this option to specify the minimum number of letters the caller should dial in order to be routed by the Directory Dialing Mailbox. Callers must dial this minimum number of letters, followed by #.</p>	1-3	1
02	<p>Directory List Number to Use (Directory List)</p> <p>Use this option to specify which Directory List the Directory Dialing Mailbox should use. The Directory Dialing Mailbox can only call Subscriber Mailboxes that are in the list specified by this option.</p>	1-8 (lists 1-8)	1 (list 1)
03	<p>Extension Name Match (Name Match)</p> <p>Use this option to determine which portion of the extension's programmed name Directory Dialing will be used to route the call. The setting you choose in this option depends on how you set up 47-01-16 : IntraMail Basic Options - Name Format.</p> <p>For example, if 47-01-16 was set to last/first (2) and 47-15-03 was set to first (1), an entered name of "Mary Jones" would be routed by "Jones", not "Mary". If 47-01-16 was set to first/last (1) and 47-15-03 was set to first (1), Directory Dialing would route by "Mary".</p>	0 (first) or 1 (last)	0 (first)
04	<p>Unscreened or Screened Transfer (Transfer Option)</p> <p>Use this option to define the action Directory Dialing uses when routing a call.</p>	0 = Screened Transfer 1 = Unscreened Transfer	0
05	<p>Screened Transfer Timeout (Scrn Trf Timeout)</p> <p>Use this option to set how long a Screened Transfer (STRF) from the Directory Dialing Mailbox will ring an unanswered extension before recalling.</p> <ul style="list-style-type: none"> • The 24-02-04 : System options for Transfer - Transfer Recall Time interval has no interaction with this timer. 	0 = no recall 1-255 seconds	15 (seconds)

Program 47 : IntraMail

47-15 : Routing Directory Mailbox Options

06	Time Limit for Dialing Commands (Dialing Timeout) This option determines how long IntraMail will wait for the caller connected to the Directory Dialing Mailbox to dial before repeating the Directory Dialing Message. If the caller doesn't dial within three repeats of the message, IntraMail routes the call to the Next Call Routing Mailbox for the Directory Dialing Mailbox.	0 = no timeout 1-99 seconds	5 (seconds)
07	Fax Detection (Fax Detection) Use this option to enable or disable Fax Detection for the Directory Dialing Mailbox. If enabled (1), the Directory Dialing Mailbox will detect incoming fax CNG tone. The fax will then route to the company fax machine according to the settings of 47-01-06 : IntraMail Basic Options - Fax Extension . If disabled (0), the Directory Dialing Mailbox will not detect incoming fax calls.	0 = Disabled 1 = Enabled	0
08	Next Call Routing Mailbox (Next CR Mbox) Use this option to specify the Next Call Routing Mailbox for the Directory Dialing Mailbox. If a Next Call Routing Mailbox is specified, the following will occur: <ul style="list-style-type: none">• If the caller dials 0 while listening to the Directory Dialing Message, they route to the 0 action programmed into the Dial Action Table associated with the Next Call Routing Mailbox.• If the caller dials # while listening to the Directory Dialing Message, they route immediately to the Next Call Routing Mailbox and listen to the recorded Instruction Menu Message for that mailbox.	01-32	0
09	Fax Extension (Fax Extension) Use this option to specify the extension number of the fax machine associated with the Call Routing Mailbox. When the Call Routing Mailbox answers a call and detects fax (CNG) tone, it automatically transfers the call to this extension.	Up to 8 digits	No Entry

Program 51 : CygniLink Service

51-01 : CygniLink System Settings

Level:

IN

Feature Availability

- Available.

Description

Use **Program 51-01 : CygniLink System Settings** to define the CygniLink settings. Each UX5000 within the network must be defined.

Input Data

Item No.	Item	Input Data	Default	Related Programs
01	<p>CygniLink System ID This is the ID number that identifies each UX5000 within the CygniLink network. Each UX5000 must be a unique number in the network. When this option is set to 0, CygniLink is disabled.</p> <p><i>The UX5000 must be reset when changing this option.</i></p>	0-50 (0 = Disabled)	0	
02	<p>Primary Candidate Order When the Primary UX5000 is turned off or disconnected from the network, this value is used to select the new Primary UX5000 with the Fail Over feature. The smaller the number, the higher the priority for the UX5000.</p> <p>When the value for two UX5000s is the same, lower CygniLink System ID (51-01-01) is selected as the Primary UX5000.</p>	1-50	30	51-01-01
03	<p>Secondary System The link between UX5000s is established based on this setting.</p> <p>When enabled, the UX5000 will connect with the top priority Primary UX5000 (address set in Program 51-04-01). If the UX5000 is not found within the defined time (Program 51-05-02), the Fail Over feature of the UX5000 will search for the Primary UX5000 (as if this option were set to '0').</p> <p>The link between UX5000s is dynamically established based on the node list set in Program 51-03-01. The Primary UX5000 will be selected in the order in which the UX5000s wake up.</p>	0=Disable 1=Enable	0	51-03-01 51-04-01 51-05-02

Conditions

- If the CygniLink system ID is changed in item 1, the UX5000 must be reset.
- This program cannot be changed when the CygniLink feature is established.

Program 51 : CygniLink Service

51-05 : Timer Settings for CygniLink

Level:

IN

Feature Availability

- Available.

Description

Use **Program 51-05 : Timer Settings for CygniLink** to set the various timers used with the CygniLink feature.

Input Data

Item No.	Item	Input Data	Default
01	Keep Alive Sending Interval Set the interval for the secondary UX5000 to send the Keep Alive packet to the Primary UX5000 to confirm communication.	1-3600	5
02	Keep Alive Response Waiting Time The secondary UX5000 will wait this interval for response to the Keep Alive packet to confirm communication with Primary UX5000. If no response is received, Fail Over occurs. A setting of '0' will disable this and the UX5000 will wait indefinitely for a response from the Primary UX5000. For Fail Over to occur, this timer must be set to an entry other than '0'.	0, 5-10800	20
03	Primary Search Packet Sending Interval This timer determines how long between packets the UX5000 will wait when searching for a new Primary UX5000 with the Fail Over feature.	1-3600	5
04	Top Primary Search Time Set the interval between packet sending when the UX5000 is reviewing priority levels for a new higher-priority Primary UX5000.	5-10800	20
05	Top Priority Primary Detection Packet Sending Interval When the current Primary UX5000 is not the Top Priority Primary UX5000, the UX5000 sends packets at this interval to check if a higher priority UX5000 exists.	1-3600	10
06	Primary System Seeking Time with Forced Change Primary When the Forced Change Primary command is executed, the UX5000 will search for the new Primary UX5000 for this time.	1-10800	30

Program 51 : CygniLink Service

51-05 : Timer Settings for CygniLink

Item No.	Item	Input Data	Default
07	Communications Socket Refresh Timer If the IP connection becomes unstable and communication is lost (keep-alive function will not work), the UX5000 retries the connection at this interval.	20-3600	40

Conditions

None

Feature Cross Reference

Terminal Programming Instructions

To enter data for Program 51-05 (Timer Settings for CygniLink):

1. Enter the programming mode.
2. 51 05
3. Enter the number of the item you want to program.

```
51-05-01
KeepAlive Interval 5
back ↑ ↓ select
```

3. Enter the number of the item you want to program.

```
51-05-nn
nnnnn
← →
```

4. Enter data for the item you selected + HOLD.
5. Enter data for the next item in the program.
OR
Press MIC once to enter a new item number.
OR
Press MIC until you've exited that series's programming section.

Program 51 : CygniLink Service

51-06 : CygniLink Primary System Automatic Integration Setting

Level:

IN

Feature Availability

- Available.

Description

Use **Program 51-06 : CygniLink Primary System Automatic Integration Setting** to set the automatic integration. This will allow for multiple primary UX5000s which may have occurred due to Fail Over to be restructured around the recovered top priority Primary UX5000.

Input Data

Item No.	Item	Input Data	Default
01	Primary Automatic Integration When Fail Over occurs, multiple Primary UX5000s may be established. When the connection is recovered, with this option enabled, the CygniLink feature will automatically be re-established around the top priority Primary UX5000.	0 = Disabled 1 = Enabled	0
02	Blade Reset Timing Option When the Primary Automatic Integration re-establishes the CygniLink network, the blades in the secondary UX5000s are reset. This option determines if the secondary UX5000 blades are reset only when all blades are idle (0) or at any time (1).	0 = Disabled 1 = Enabled	0

Conditions

None

Feature Cross Reference

- Networking - CygniLink

Program 51 : CygniLink Service

51-06 : CygniLink Primary System Automatic Integration Setting

Terminal Programming Instructions

To enter data for Program 51-06 (CygniLink Primary System Automatic Integration Setting):

1. Enter the programming mode.
2. 51 06

```
51-06-01
Auto Unification  0:Off
back  ↑          ↓  select
```

3. Enter the number of the item you want to program.

```
51-06-nn
nnnnn
←          →
```

4. Enter data for the item you selected + HOLD.
5. Enter data for the next item in the program.
OR
Press MIC once to enter a new item number.
OR
Press MIC until you've exited that series's programming section.

Program 51 : CygniLink Service

51-07 : CygniLink Forced Change of Primary System Settings

Level:

IN

Feature Availability

- Available.

Description

Use **Program 51-07 : CygniLink Forced Change of Primary System Settings** to enable the ability to manually reset the CygniLink's Primary UX5000.

Input Data

Item No.	Item	Input Data	Default
01	Allow Forced Change of Primary System When Fail Over occurs, you can manually change the Primary UX5000 using Program 51-08, if this option is enabled. Program 51-06-01 must be set to "0".	0 = Disabled 1 = Enabled	0
02	Blade Reset Timing Option When the Forced Change of Primary Settings is performed, the blades in the secondary UX5000s are reset. This option determines if the secondary UX5000 blades are reset only when all blades are idle (0) or at any time (1).	0 = Disabled 1 = Enabled	0

Conditions

None

Feature Cross Reference

- Networking - CygniLink

Program 51 : CygniLink Service

51-07 : CygniLink Forced Change of Primary System Settings

Terminal Programming Instructions

To enter data for Program 51-07 (CygniLink Forced Change of Primary System Settings):

1. Enter the programming mode.
2. 51 07

51-07-01
Forced Appoint 0:Off
back ↑ ↓ select

3. Enter the number of the item you want to program.

51-07-nn
nnnnn
← →

4. Enter data for the item you selected + HOLD.

Program 51 : CygniLink Service

51-08 : New Primary System Setting

Level:

IN

Feature Availability

- Available.

Description

Use **Program 51-08 : New Primary System Setting** to define the settings for the Primary UX5000 if the Primary is forced manually.

Input Data

Item No.	Item	Input Data	Default
01	Internet Protocol Address of New Primary When forcing the UX5000 to update to a new Primary UX5000, the UX5000 using the IP address defined here as the new Primary. <i>Note: After a Forced Change of Primary UX5000 is done, this entry will be erased.</i>	0.0.0.0 ~ 126.255.255.254 128.0.0.1 ~ 191.255.255.254 192.0.0.1 ~ 223.255.255.254	0.0.0.0
02	System ID of New Primary If an IP address is displayed in Program 51-11-03, you can execute a Forced Change Primary UX5000 by entering the UX5000 ID. If this ID is set to "0", the Top Priority UX5000 will be selected as the new Primary.	0-50	Blank

Conditions

- Program 51-06-01 must be set to "0" and 51-07-01 must be set to "1" in order for this program to work.
- The network must be connected to the Primary UX5000 and the IP address must be displayed in 51-11-03 to specify the new primary by system ID.

Feature Cross Reference

- Networking - CygniLink

Program 51 : CygniLink Service

Program 51 : CygniLink Service

51-09 : CygniLink TCP Port Settings

Level:

IN

Feature Availability

- Available.

Description

Use **Program 51-09 : CygniLink TCP Port Settings** to set the various communication ports used with CygniLink. The port numbers should not be changed while CygniLink is running. Once changed, the UX5000 must be reset.

Input Data

Item No.	Item	Input Data	Default
01	Primary Port Define the port the Primary UX5000 uses to communicate with the Secondary UX5000.	0-65535	58000
02	Communication Port Define the port used to communicate between other networked UX5000s.	0-65535	58001
03	Secondary Port This setting defines the port used by the Secondary UX5000 to communicate to the Primary UX5000. If '0' is entered, the port is selected dynamically.	0-65535	0
04	Primary Search Port When Fail Over occurs, each UX5000 communicates with the other UX5000s using the port number specified in this entry. If '0' is entered, the port is selected dynamically. If an entry other than '0' is made, up to 50 ports (depending in the number of networked UX5000s) are continuously used from the specified port number. (Ex: If 5000 is entered, 5001-5049 will be used.)	0-65535	0
05	Primary Detection Port Enter the port number to search for the Top Priority Primary UX5000. If '0' is entered, the port is selected dynamically.	0-65535	0
06	Database Replication Secondary System Listening Port Define the listening port used so that the Secondary UX5000 can replicate the Primary UX5000 database.	0-65535	58002

Program 51 : CygniLink Service

51-09 : CygniLink TCP Port Settings

Item No.	Item	Input Data	Default
07	Database Replication Primary System Detection Port Define the port used for communication so that the Primary UX5000 may synchronize the Secondary UX5000 with the UX5000 data. If '0' is entered, the port is selected dynamically.	0-65535	0

Conditions

- The port numbers should not be changed while CygniLink is running. Once changed, the UX5000 must be reset.

Feature Cross Reference

- Networking - CygniLink

Program 51 : CygniLink Service

51-16 : CygniLink System Data Replication Mode Setting

Level:

IN

Feature Availability

- Available.

Description

Use **Program 51-16 : CygniLink System Data Replication Mode Setting** to define the replication mode to be used for data between the Primary and Secondary UX5000s.

Input Data

Item	Name	Input Data	Default
01	System Data Replication Mode Use this option to set the replication mode. An entry of '1' will replicate the data at the time set in 51-16-02. If this option is set to '2', replication will occur at the interval set in 51-16-03.	0=Disabled 1=Setting Time Mode 2=Interval Mode	0
02	System Data Replication Time Setting If Program 51-16-01 is set to '1', set the time to replicate the UX5000 data.	0000-2359	0200
03	System Data Replication Interval Setting If Program 51-16-01 is set to '2', set the interval time between replicating the UX5000 data.	15-1440 (Min)	30 (min)
04	Replication Time Stamp This program displays the last time the UX5000 data was replicated. This is automatically updated whenever the replication occurs. This option is view-only.	Month: 0~12 Day: 00~31 Hour: 00~23 Minute: 00~59	-
05	System Data Replication Wait Time When a CygniLink network is created, this option determines how long the UX5000 waits until replication is started.	1-86400 (seconds) (86400 seconds = 1 day)	180 sec (3 min)
06	System Data Replication Interval This option sets the interval time to start replication to the next node after replication has completed to one node.	0-86400 (seconds) (86400 seconds = 1 day)	1 (sec)

Conditions

None

Conditions

The UX5000 must be reset in order for any changes to these items take affect.

Feature Cross Reference

- Selectable Ring Tones

Terminal Programming Instructions

To enter data for Program 80-01 (Service Tone Setup):

- Enter the programming mode.
- 80 01

```
80-01-01  Svc Tone1
Repeat Count  0
back  ↑      ↓  select
```
- Enter the number of the item you want to program.

```
80-01-nn  Svc Tonenn
nnnnn
←      -      +      →
```
- Enter the Service Tone number to be defined or press FLASH to use the displayed entry.
- Enter data for the item you selected + HOLD.
- Enter data for the next item in the program.

OR

Press MIC once to enter a new item number.

OR

Press MIC until you've exited that series's programming section.

Program 80 : Basic Hardware Setup for System

80-02 : DTMF Tone Setup

Level:

IN

Feature Availability

- Available.

Description

Use **Program 80-02 : DTMF Tone Setup** to define the duration (on time) and pause (off time) for DTMF dialing. This option affects all trunk line calls system wide. You make separate entries for duration and pause. It is also possible to adjust the level of both high and low frequency tone.

Input Data

Item No.	Item	Input Data	Default
01	Duration	1-255	5 (100 ms)
02	Pause	1-255	5 (100 ms)
03	Tone Level (Low) (dB)	1-97 (-45.0 ~ +3)	65 (-13dB)
04	Tone Level (High)	1-97 (-45.0 ~ +3)	69 (-11dB)

Conditions

- This program will not be displayed in PCPro/WebPro until signing in with the MF level password.
- The UX5000 must be reset in order for any changes to these items take affect.

Feature Cross Reference

- Selectable Ring Tones

Program 80 : Basic Hardware Setup for System

80-02 : DTMF Tone Setup

Terminal Programming Instructions

To enter data for Program 80-02 (DTMF Tone Setup):

1. Enter the programming mode.
2. 80 02

```
80-02-01
Duration Time 5
back ↑ ↓ select
```

3. Enter the number of the item you want to program.

```
80-02-nn
nnnnn
← →
```

4. Enter data for the item you selected + HOLD.
5. Enter data for the next item in the program.
OR
Press MIC once to enter a new item number.
OR
Press MIC until you've exited that series's programming section.

Program 80 : Basic Hardware Setup for System

80-04 : Call Progress Tone Detector Setup

Feature Cross Reference

- Selectable Ring Tones

Terminal Programming Instructions

To enter data for Program 80-04 (Call Progress Tone Detector Setup):

1. Enter the programming mode.
2. 80 04

```
80-04-01  Tone Rcv1
Detect level 0:0/-30
back  ↑      ↓  select
```

3. Enter the number of the item you want to program.

```
80-04-nn  Tone Rcvn
nnnnn
←      -      +      →
```

4. Enter the tone number to be defined or press FLASH to use the displayed entry.
5. Enter data for the item you selected + HOLD.
6. Enter data for the next item in the program.
OR
Press MIC once to enter a new item number.
OR
Press MIC until you've exited that series's programming section.

Program 80 : Basic Hardware Setup for System

80-05 : Date Format for SMDR and System Reports

Level:

IN

Feature Availability

- Available.

Description

Use **Program 80-05 : Date Format for SMDR and System Reports** to define the date format when printing out the SMDR, alarm report, UX5000 information report, etc.

Input Data

Item No.	Date Format	Default
01	0 = American Format (Month / Date / Year) 1 = Japanese Format (Year / Month / Date) 2 = European Format (Date/Month/Year)	0

Conditions

- This program will not be displayed in PCPro/WebPro until signing in with the MF level password.

Feature Cross Reference

- Station Message Detail Recording
- Time and Date

Terminal Programming Instructions

To enter data for Program 80-05 (Date Format for SMDR and System Reports):

1. Enter the programming mode.
2. 80 05

```
80-05-01
Date Format  1:Japan
back  ↑      ↓  select
```

3. Enter the number of the item you want to program.

```
80-05-nn
nnnnn
←      →
```

4. Enter data for the item you selected + HOLD.
5. Enter data for the next item in the program.
OR
Press MIC once to enter a new item number.
OR
Press MIC until you've exited that series's programming section.

Program 80 : Basic Hardware Setup for System 80-07 : Call Progress Tone Detector Frequency Setup

Level:

MF

Feature Availability

- Not Available.

Description

This option is not used in the U.S.

Program 80 : Basic Hardware Setup for System

80-09 : Short Ring Setup

Level:

IN

Feature Availability

- Not Available.

Description

Use **Program 80-09 : Short Ring Setup** to define the short ring for UX5000 multi-line terminals.

Input Data

Short Ring Number	01 - 32
-------------------	---------

Input Data

Item No.	Item	Input Data
01	Frequency 1	00, 01-15 (00 = No Setting)
02	Frequency 1	00, 01-15 (00 = No Setting)
03	Ring Cycle	00, 01-14 (00 = No Setting)

When the single sound is sent, frequency 1/2 is set to the same value.

Data	Frequency (Hz)	Data	Ring Cycle (msec)
01	392	01	125 (On) / Off
02	440	02	125 (On) / 125 (Off) / 125 (On) / Off
03	494	03	125 (On) / 125 (Off) / 125 (On) / 125 (Off) / 125 (On) / Off
04	523	04	125 (On) / 125 (Off) / 125 (On) / 125 (Off) / 125 (On) / 125 (Off) / 125 (On) / Off
05	587	05	250 (On) / Off
06	659	06	250 (On) / 250 (Off) / 250 (On) / Off

Feature Cross Reference

- Central Office Calls, Answering

Terminal Programming Instructions

To enter data for Program 80-09 (Short Ring Setup):

1. Enter the programming mode.
2. 80 09

```
80-09-01 Short Ring1
Frequency1 8 :784Hz I2
back ↑ ↓ select
```

3. Enter the number of the item you want to program.

```
80-09-nn Short Ringn
nnnnn
← →
```

4. Enter the short ring number to be defined or press FLASH to use the displayed entry.
5. Enter data for the item you selected + HOLD.
6. Enter data for the next item in the program.
OR
Press MIC once to enter a new item number.
OR
Press MIC until you've exited that series's programming section.

Program 80 : Basic Hardware Setup for System

80-10 : MF Tone Receiver Setup

Level:
MF

Feature Availability
• Not Available.

Description

Use **Program 80-10 : MF Tone Receiver Setup** to define the various levels and timers for the MF Tone Receiver

Input Data

MF Tone Receiver Type Number	1 = MF Receiver for Extension 2 = MF Receiver for Trunk 3 = -- Reserve -- 4 = -- Reserve -- 5 = -- Reserve --
------------------------------	---

Input Data

Item No.	Item	Input Data
01	Detect Level	0 : 0dBm to -25dBm 1 : -5dBm to -30dBm 2 : -10dBm to -35dBm 3 : -15dBm to -40dBm 4 : -20dBm to -45dBm 5 : -25dBm to -50dBm 6 : -30dBm to -55dBm
02	Start Delay Time	0-255 (0.25step, 0ms-64ms)
03	Minimum Detect Level	0-15 detect level 0 : -10dBm(0) to -25dBm(15) detect level 1 : -15dBm(0) to -30dBm(15) detect level 2 : -20dBm(0) to -35dBm(15) detect level 3 : -25dBm(0) to -40dBm(15) detect level 4 : -30dBm(0) to -45dBm(15) detect level 5 : -35dBm(0) to -50dBm(15) detect level 6 : -40dBm(0) to -55dBm(15)
04	Maximum Detect Level	0-15 detect level 0 : 0dBm(0) to -15dBm(15) detect level 1 : -5dBm(0) to -20dBm(15) detect level 2 : -10dBm(0) to -25dBm(15) detect level 3 : -15dBm(0) to -30dBm(15) detect level 4 : -20dBm(0) to -35dBm(15) detect level 5 : -25dBm(0) to -40dBm(15) detect level 6 : -30dBm(0) to -45dBm(15)
05	Twist Level	0-9 (1dB...10dB)
06	S/N Ratio	0-4 (-5 step, 0dB to -20dB)
07	ON Detect Tme	1-255 (15 step, 30ms to 3840ms)
08	OFF Detect Tme	1-255 (15step, 30ms to 3840ms)

Program 80 : Basic Hardware Setup for System

80-10 : MF Tone Receiver Setup

Default

Item	Name	Type 1	Type 2	Type 3	Type 4	Type 5
01	Detect Level	0	0	0	0	0
02	Start Delay Time	0	0	0	0	0
03	Min. Detect Level	10 (-20dBm)	10 (-20dBm)	10 (-20dBm)	10 (-20dBm)	10 (-20dBm)
04	Max. Detect Level	2 (-2dBm)	2 (-2dBm)	2 (-2dBm)	2 (-2dBm)	2 (-2dBm)
05	Twist Level	5 (6dBm)	5 (6dBm)	5 (6dBm)	5 (6dBm)	5 (6dBm)
06	S/N Ratio	2 (-2dBm)	2 (-2dBm)	2 (-2dBm)	2 (-2dBm)	2 (-2dBm)
07	ON Detect Time	1 (30ms)	1 (30ms)	1 (30ms)	1 (30ms)	1 (30ms)
08	OFF Detect Time	1 (30ms)	1 (30ms)	1 (30ms)	1 (30ms)	1 (30ms)

Conditions

None

Terminal Programming Instructions

To enter data for Program 80-10 (MF Tone Receiver Setup):

1. Enter the programming mode.
2. 80 10

```
80-10-01 Type1
Detect Level 0
back ↑ ↓ select
```

3. Enter the number of the item you want to program.

```
80-10-nn Typen
nnnn
← →
```

4. Enter the type number to be defined or press FLASH to use the displayed entry.
5. Enter data for the item you selected + HOLD.
6. Enter data for the next item in the program.
 - OR
 - Press MIC once to enter a new item number.
 - OR
 - Press MIC until you've exited that series's programming section.

Program 80 : Basic Hardware Setup for System

80-10 : MF Tone Receiver Setup

- For Your Notes -

Program 81 : Basic Hardware Setup for Trunk

81-01 : COIU Initial Data Setup

Level:

IN

Feature Availability

- Available.

Description

Use **Program 81-01 : COIU Initial Data Setup** to define the various basic timers for COIU blades.

Input Data

Item No.	Item	Input Data	Default
01	Companding Method Type	0 = u-law 1 = A-law	0 (u-law)
02	Loop Current Detection Time	1-255 (8-2040mS)	75 (600ms)
03	Clear Signal (Open Loop) Detection Time	1-255 (8-2040mS)	38 (304ms)
04	Ringing Signal Detection Minimum Time	1-255 (8-2040mS)	13 (104ms)
05	Single Ringing Detection Minimum Time	0-255 (0,8-2040mS)	82 (656ms)
06	Double Ringing Detection Minimum off Time	0-255 (0,8-2040mS)	13 (104ms)
07	Double Ringing Detection Maximum off Time	0-255 (0,8-2040mS)	50 (400ms)
08	Ringing Signal Not Detected Minimum	1-255 (8-2040mS)	88 (704ms)
09	Abandoned Call Detection Timer	1-255 (64-16320mS)	94 (6016ms)
10	Continuous Ringing Minimum Time	0-255 (0,8-2040mS)	38 (304ms)
11	Continuous Ringing Maximum Time	0-255 (0,8-2040mS)	88 (704ms)
12	Caller ID Detection Time If an entry other than "0" is made, the actual waiting time is the value x 64ms. For example, if the timer is set to 46, the COIU waits 46 x 64ms = 2944ms). If a problem exists with Caller ID displaying, the recommended entry to try first would be "46".	0 = COIU waits 500ms from end of first ring to beginning of FSK signal for Caller ID 1 - 255 (64-16320mS) = The COIU waits for the Caller ID FSK signal from when the first ring pulse was detected.	0
13	Grounding Time	1-255 (16-4080mS)	9 (144ms)
14	Flash (Hooking 1) This sets the flash (Hooking 1) duration for analog trunk calls. See Program 14-02-04.	1-255 (16-4080mS)	50 (800ms)

Program 81 : Basic Hardware Setup for Trunk

81-01 : COIU Initial Data Setup

Item No.	Item	Input Data	Default
15	Flash (Hooking 2) This sets the flash (Hooking 2) duration for analog trunk calls. See Program 14-02-04.	1-255 (16-4080mS)	156 (2496ms)
16	Pause Time	1-255 (64-16320mS)	16 (1024ms)
17	PFT Idle Detection Time	1-255 (64-16320mS)	47 (3008ms)
18	Grounding Start Time	1-255 (8-2040mS)	6 (48ms)
19	Grounding Start Give-Up Time	1-255 (64-16320mS)	47 (3008ms)
20	Loop Reverse Detect Minimum Time	1-255 (8-2040mS)	13 (104ms)
21	Loop Reverse Detect Maximum Time	1-255 (8-2040mS)	107 (856ms)
22	Loop Disconnect Detect Minimum Time	1-255 (8-2040mS)	50 (400ms)
23	Loop Disconnect Detect Maximum Time	1-255 (8-2040mS)	80 (640ms)
24	On Hook Normal Detect Time	1-255 (8-2040mS)	2 (24ms)
25	On Hook Reverse Detect Time	1-255 (8-2040mS)	2 (16ms)
26	On Hook Disconnect Detect Time	1-255 (16-4080mS)	188 (3008ms)
27	Pulse Dial Break Time (10pps)	1-255 (8-2040mS)	8 (32ms)
28	Pulse Dial Make Time (10pps)	1-255 (8-2040mS)	5 (40ms)
29	Inter-Digit Time (10pps)	1-255 (32-8160mS)	25 (800ms)
30	Pulse Dial Break Time (20pps)	1-255 (8-2040mS)	4 (32ms)
31	Pulse Dial Make Time (20pps)	1-255 (8-2040mS)	2 (16ms)
32	Inter-Digit Time (20pps)	1-255 (32-8160mS)	16 (512ms)
33	Charging Pulse Minimum Duration Time	1-255 (8-2040mS)	9 (72ms)
34	Charging Pulse Minimum Period Time	1-255 (8-2040mS)	29 (232ms)
35	Charging Pulse Minimum Interval Time	1-255 (8-2040mS)	6 (48ms)
36	Long Ringing Minimum Detection Time	1-255 (16-4080mS)	50 (2400ms)

back  ↑   ↓   select
```

3. Enter the number of the item you want to program.

```
81-06-nn  L3 Timernn
nnnnn
←   -   +   →
```

4. Enter the Layer 3 Timer number to be defined or press FLASH to use the displayed entry.
5. Enter data for the item you selected + HOLD.
6. Enter data for the next item in the program.
OR
Press MIC once to enter a new item number.
OR
Press MIC until you've exited that series's programming section.

Program 81 : Basic Hardware Setup for Trunk 81-07 : Codec Filter Setup for Analog Trunk Ports

Level:

IN

Feature Availability

- Available.

Description

Use **Program 81-07 : Codec Filter Setup for Analog Trunk Ports** to define the codec (QSLAC) filter for each analog trunk port.

Input Data

Trunk Port Number	001-200
-------------------	---------

Item No.	Item	Codec Filter Type	Default
01	Codec Filter Setup for Analog Trunk Ports	0 = No filter 1 = Type 1 2 = Type 2 3 = Type 3 4 = Type 4 (Program 81-09 is followed)	1

Conditions

None

Feature Cross Reference

- Central Office Calls, Answering
- Central Office Calls, Placing

Program 81 : Basic Hardware Setup for Trunk

81-07 : Codec Filter Setup for Analog Trunk Ports

Terminal Programming Instructions

To enter data for Program 81-07 (Codec FilterSetup for Analog Trunk Ports):

1. Enter the programming mode.
2. 81 07

```
81-07-01  Trunk1
CODEC Filter  2:4dB Loss
back  ↑      ↓  select
```

3. Enter the number of the item you want to program.

```
81-07-nn  Trunknnn
nnnnn
←      -      +      →
```

4. Enter the trunk port number to be defined or press FLASH to use the displayed entry.
5. Enter data for the item you selected + HOLD.
6. Enter data for the next item in the program.
OR
Press MIC once to enter a new item number.
OR
Press MIC until you've exited that series's programming section.

Program 81 : Basic Hardware Setup for Trunk

81-08 : T1 Trunk Timer Setup

Level:

IN

Feature Availability

- Available.

Description

Use **Program 81-08 : T1 Trunk Timer Setup** to define the various basic timers for each T1 trunk type.

Input Data

Layer 3 Timer Type Number	1-5
---------------------------	-----

Item No.	Item	Input Data	Default
01	Loop - Answer Signal Detection Time	1-250 (4msec - 1000msec)	15 (60msec)

Program 81 : Basic Hardware Setup for Trunk

81-08 : T1 Trunk Timer Setup

Conditions

None

Feature Cross Reference

- T1 Trunking

Terminal Programming Instructions

To enter data for Program 81-08 (T1 Trunk Timer Setup):

1. Enter the programming mode.
2. 81 08

```
81-08-01
Ans Sig Detect LOOP 15
back ↑ ↓ select
```

3. Enter the number of the item you want to program.

```
81-08-nn
nnnnn
← →
```

4. Enter data for the item you selected + HOLD.
5. Enter data for the next item in the program.
OR
Press MIC once to enter a new item number.
OR
Press MIC until you've exited that series's programming section.

Program 81 : Basic Hardware Setup for Trunk

81-09 : COIU Codec Filter Data Setup

Level:

IN

Feature Availability

- Available.

Description

The UX5000 will use the settings in **Program 81-09 : COIU Codec Filter Data Setup** when **Program 81-07-01 : Codec Filter Setup for Analog Trunk Ports** is set to "4 - Specified Data".

These values should not be changed from their default settings unless directed by NEC'S Technical Service department.

The side tone of the COIU is adjusted using all 16 values, however, special software is required in order to compute these values. The setting is not proportional to the gain level. To change these values, contact NEC's Technical Service department for assistance.

Input Data

Item	Description	Range	Default
01	B1 Filter (01)	0-255	162
02	B1 Filter (02)	0-255	98
03	B1 Filter (03)	0-255	162
04	B1 Filter (04)	0-255	42
05	B1 Filter (05)	0-255	34
06	B1 Filter (06)	0-255	177

Terminal Programming Instructions

To enter data for Program 81-09 (COIU Codec Filter Data Setup):

1. Enter the programming mode.
2. 81 09

```
81-09-01
B1 Filter(01)      171
back  ↑           ↓  select
```

3. Enter the number of the item you want to program.

```
81-09-nn
nnnnnn
←           →
```

4. Enter data for the item you selected + HOLD.
5. Enter data for the next item in the program.
OR
Press MIC once to enter a new item number.
OR
Press MIC until you've exited that series's programming section.

Program 82 : Basic Hardware Setup for Extension

82-01 : Incoming Ring Tone

Level:

IN

Feature Availability

- Available.

Description

Use **Program 82-01 : Incoming Ring Tone** to set the incoming ring tones, which are the tones a user hears when a call rings an extension. These tones are grouped into four ring tone *Ranges* (1-4), also called patterns, that consist of a combination of frequencies. (You assign a specific *Range* to trunks in Program 22-03 and to extensions in Program 15-02.) Within each *Range* there are three frequency *Types*: High, Middle and Low. (Service Code 820 allows users to choose the *Type* for their incoming calls.) Each *Type* in turn consists of two frequencies and the modulation “played” simultaneously to make up the tone. These frequencies are determined by their Frequency Number selected in Items 1 and 2 (see below). In this program, you assign the two *Frequency Numbers* and *Modulation* for each *Type*, for each of the four *Ranges*. The chart below shows the default *Frequency Numbers* for each *Type* in each *Range*.

Input Data

Incoming Ringing Tone Number	1 = Pattern 1 (Trunk Incoming) 2 = Pattern 2 (Trunk Incoming) 3 = Pattern 3 (Trunk Incoming) 4 = Pattern 4 (Trunk Incoming) 5 = Intercom Incoming Pattern 6 = Sensor Tone Pattern
------------------------------	--

Ringling Tone Type Number	1 = High 2 = Mid 3 = Low
---------------------------	--------------------------------

Item No.	Item	Input Data
01	Frequency 1	1 = 520Hz
02	Frequency 2	2 = 540Hz 3 = 660Hz 4 = 760Hz 5 = 1100Hz 6 = 1400Hz 7 = 2000Hz
03	Modulation	0 = No modulation 1 = 8Hz modulation 2 = 16Hz modulation 3 = envelope

Program 82 : Basic Hardware Setup for Extension

82-01 : Incoming Ring Tone

Default

Incoming Ringing Tone Number	Tone Type	Frequency 1	Frequency 2	Modulation
Pattern 1 (Trunk Incoming)	High	1100	1400	16Hz Modulation
	Mid	660	760	16Hz Modulation
	Low	520	660	16Hz Modulation
Pattern 2 (Trunk Incoming)	High	1100	1400	8Hz Modulation
	Mid	660	760	8Hz Modulation
	Low	520	660	8Hz Modulation
Pattern 3 (Trunk Incoming)	High	2000	760	16Hz Modulation
	Mid	1400	660	16Hz Modulation
	Low	1100	540	16Hz Modulation
Pattern 4 (Trunk Incoming)	High	2000	760	8Hz Modulation
	Mid	1400	660	8Hz Modulation
	Low	1100	540	8Hz Modulation
Intercom Incoming Pattern	High	1100	1400	8Hz Modulation
	Mid	660	760	8Hz Modulation
	Low	520	660	8Hz Modulation
Alarm Sensor Pattern	High	760	760	No Change
	Mid	760	760	No Change
	Low	760	760	No Change

Conditions

- This program will not be displayed in PCPro/WebPro until signing in with the MF level password.

Feature Cross Reference

- Distinctive Ringing Tones and Flash Patterns
- Selectable Ring Tones

Program 82 : Basic Hardware Setup for Extension

82-01 : Incoming Ring Tone

Terminal Programming Instructions

To enter data for Program 82-01 (Incoming Ring Tone):

1. Enter the programming mode.
2. 82 01

```
82-01-01  INC Freq  1
INC-Rng1  Freq1:5:1100Hz
back  ↑                ↓  select
```

3. Enter the number of the item you want to program.

```
82-01-nn  INC Freq  n
nnnnn
←      -      +      →
```

4. Enter the Frequency number to be defined or press FLASH to use the displayed entry.
5. Enter data for the item you selected + HOLD.
6. Enter data for the next item in the program.
OR
Press MIC once to enter a new item number.
OR
Press MIC until you've exited that series's programming section.

Program 82 : Basic Hardware Setup for Extension

Program 82 : Basic Hardware Setup for Extension

82-05 : ISDN BRI & PRI Layer 2 (S-Point) Initial Data Setup

Terminal Programming Instructions

To enter data for Program 82-05 (ISDN BRI & PRI Layer 2 (S-Point) Initial Data Setup):

1. Enter the programming mode.
2. 82 05

```
82-05-01
Timer T200  10
back  ↑      ↓  select
```

3. Enter the number of the item you want to program.

```
82-05-nn
nnnnn
←          →
```

4. Enter data for the item you selected + HOLD.
5. Enter data for the next item in the program.
OR
Press MIC once to enter a new item number.
OR
Press MIC until you've exited that series's programming section.

Program 82 : Basic Hardware Setup for Extension

82-06 : ISDN BRI & PRI Layer 3 (S-Point) Timer Setup

Level:

IN

Feature Availability

- Available.

Description

Use **Program 82-06 : ISDN BRI & PRI Layer 3 (S-Point) Timer Setup** to define the various basic timers for layer 3 of ISDN BRI/PRI S-Point (defined in Program 10-03-04).

Input Data

Layer 3 Timer Type Number	1-5
---------------------------	-----

Item No.	Item	Input Data	Default
01	T301	0,180-254 (sec)	180 (sec)
02	T302	1-254 (sec)	10 (sec)
03	T303	1-254 (sec)	4 (sec)
04	T304	0-254 (sec)	20 (sec)
05	T305	1-254 (sec)	30 (sec)
06	T306	0-254 (sec)	30 (sec)
07	T307	1-254 (sec)	180 (sec)
08	T308	1-254 (sec)	4 (sec)
09	T309	1-254 (sec)	90 (sec)
10	T310	0-180 (sec)	30 (sec)
11	T312	1-254 (sec)	6 (sec)
12	T313	1-254 (sec)	4 (sec)
13	T314	1-254 (sec)	4 (sec)
14	T316	(T317+1)-254 (sec)	120 (sec)
15	T317	1-(T316-1)	60 (sec)
16	T318	1-254 (sec)	4 (sec)
17	T319	1-254 (sec)	4 (sec)
18	T320	1-254 (sec)	30 (sec)

OR
Press MIC until you've exited that series's programming section.

Program 82 : Basic Hardware Setup for Extension

82-08 : Sidetone Volume Setup

Level:

IN

Feature Availability

- Available.

Description

Program 82-08 : Sidetone Volume Setup allows adjust of the keyset sidetone volume.

There are two levels, based on whether the connected trunk is a digital trunk or analog trunk.

Input Data

Item	Description	Input	Digital Sidetone Level	Analog Sidetone Level	Default
01	Sidetone Volume	0	-54 (dB)	-54 (dB)	6
		1	-48 (dB)	-54 (dB)	
		2	-42 (dB)	-54 (dB)	
		3	-36 (dB)	-48 (dB)	
		4	-30 (dB)	-42 (dB)	
		5	-24 (dB)	-36 (dB)	
		6	-18 (dB)	-30 (dB)	
		7	12 (dB)	-24 (dB)	
		8	-12 (dB)	-18 (dB)	
		9	-12 (dB)	-12 (dB)

Program 82 : Basic Hardware Setup for Extension

82-09 : SLIU Codec Filter Data Setup

Level:

IN

Feature Availability

- Available.

Description

The UX5000 will use the settings in the new **Program 82-09 : SLIU Codec Filter Data Setup** when **Program 82-07-01 : Codec Filter Setup for Analog Station Ports** is set to "4 - Specified Data".

These values should not be changed from their default settings unless directed by NEC'S Technical Service department.

The side tone of the SLIU is adjusted using all 16 values, however, special software is required in order to compute these values. The setting is not proportional to the gain level. To change these values, contact NEC's Technical Service department for assistance.

Input Data

Item	Codec Filter Item	Description	Range	Default
01	01	B1 Filter (01)	0-255	42
02	02	B1 Filter (02)	0-255	251
03	03	B1 Filter (03)	0-255	93
04	04	B1 Filter (04)	0-255	188
05	05	B1 Filter (05)	0-255	77
06	06	B1 Filter (06)	0-255	195

Press MIC once to enter a new item number.
OR
Press MIC until you've exited that series's programming section.

Program 82 : Basic Hardware Setup for Extension

82-09 : SLIU Codec Filter Data Setup

- For Your Notes -

Program 84 : Hardware Setup for VoIP

84-01 : Codec Information Basic Setup

Level:

IN

Feature Availability

- Available.

Description

Use **Program 84-01 : Codec Information Basic Setup** to define the data of H.323 trunks. Refer to Program 84-12 for H.323 extensions and IP CygniLink Codecs.

Note that the value of Item 33 (Audio Capability Priority) determines which codec settings to use. This means, for example, that if G.711 is selected in Item 33, the settings in Items 5-12 and 19-21 will be ignored.

Input Data

Item No.	Item	Input Data	Default
01	-- Not Used --		
02	Number of G.711 Audio Frame Maximum number of G711 Audio Frames. When the voice is encoded using the PCM (Pulse Code Modulation) method, a unit is a frame of 10ms.	1 = 10 ms 2 = 20 ms 3 = 30 ms 4 = 40 ms	3
03	G.711 Silence Detection Mode Select whether to compress silence with G.711. When there is silence, the RTP packet is not sent.	0 = Disable 1 = Enable	0
04	G.711 Type Set the type of G.711.	0 = A-law 1 = μ -law	1
05	G.729 Audio Frame Maximum number of G729 Audio Frames. G.729 assumes the audio signal made by a specimen by 8kHz and the frame of 10ms is assumed to be a unit to 8kbps by the encoding compressed method.	1 = 10 ms 2 = 20 ms 3 = 30 ms 4 = 40 ms 5 = 50 ms 6 = 60 ms	3
06	G.729 Silence Compression Mode Select whether to compress silence with G.729. When there is silence, the RTP packet is not sent.	0 = Disable 1 = Enable	0
07	G.729 Jitter Buffer - Minimum Set the minimum value of the Jitter Buffer of G.729 is set. Jitter is the variation in the time between packets arriving and the buffer allows this variation to be absorbed.	0-270 ms	30
08	G.729 Jitter Buffer - Standard Set the average G.729 Jitter Buffer.	0-270 ms	60
09	G.729 Jitter Buffer - Maximum Set the maximum G.729 Jitter Buffer.	0-270 ms	120

Program 84 : Hardware Setup for VoIP

84-01 : Codec Information Basic Setup

Item No.	Item	Input Data	Default
10	-- Not Used --		
11	Number of G.723 Audio Frame Maximum number of the G.723 Audio Frame.	1 = 30 msec 2 = 60 msec	1
12	G.723 Silence Compression Mode If enabled, RTP packets are not sent for the compressed silence.	0 = Disable 1 = Enable	0
13	-- Not Used --		
14	-- Not Used --		
15	Jitter Buffer Mode Set the mode of the Jitter Buffer. 1 = Size set to the fixed amount for the codec. 2 = The minimum/maximum range for the codec is used. 3 = The minimum/maximum range for the codec is used and adjusts at any time, regardless of silence.	1 = static 2 = adaptive during silence 3 = adaptive immediately	3
16	G.711 Jitter Buffer - Minimum Set the minimum value of the G.711 Jitter Buffer.	0~160 ms	30
17	G.711 Jitter Buffer - Standard Set the average value of the G.711 Jitter Buffer.	0~160 ms	60
18	G.711 Jitter Buffer - Maximum Set the maximum value of the G.711 Jitter Buffer.	0~160 ms	120
19	G.723 Jitter Buffer - Minimum Set the minimum value of the G.723 Jitter Buffer.	0~270 ms	30
20	G.723 Jitter Buffer - Standard Set the average value of the G.723 Jitter Buffer.	0~270 ms	60
21	G.723 Jitter Buffer - Maximum Set the maximum value of the G.723 Jitter Buffer.	0~270 ms	120
22	Silence Compression (VAD) Threshold Set the voice level judged to be silence. Change value based -30 This entry is ignored if silence compression is disabled in: <ul style="list-style-type: none"> • 84-01-03 (G.711) • 84-01-06 (G.729) • 84-01-12 (G.723) • 84-01-64 (G.722) • 84-01-69 (G.726) • 84-01-71 (iLBC) 	0-30 (self-adjustment and -19db ~ +10db) 0 = self-adjustment 1:-19db (-49dbm) : 20 = 0db (-30dbm) : 29 = 9dbm (-21dbm) 30:10dbm (-20dbm)	20
23	Idle Noise Level Set the noise level which is generated when silent.	5000-7000 (-5000 ~ -7000dbm) 5000 = -5000dbm : 7000 = -7000dbm	7000

Program 84 : Hardware Setup for VoIP

84-01 : Codec Information Basic Setup

Item No.	Item	Input Data	Default
24	Echo Canceller Mode Determine whether or not to use Echo canceller.	0 = Disable 1 = Enable	1
25	Echo Canceller Tail Size Becomes invalid item if 81-01-24 is set to Disabled. Set the decrease echo when delayed.	1 = 4ms 2 = 8ms 3 = 16ms 4 = 32ms 5 = 64ms 6 = 128ms	6
26	Echo Canceller NLP Mode Non-linear processing mode. Enable this option to decrease the low level echo. When NLP is enabled, the voice with low level is replaced with NLP noise. As a result, a low echo of the level is usually removed compared with the conversation level.	0 = Disable 1 = Enable	1
27	- Not Used -	-	-
28	Echo Canceller NLP Noise Setting Becomes invalid item if 84-01-26 is set to Disabled. Set the noise level adjusting method added with NLP. When "0" is set, the level is self-adjusted - when "1" is set, Program 84-01-27 is used.	0 = adaptive 1 = fixed	0
29	- Not Used -	-	-
30	TX (Transmit) Gain Define the setting to amplify and to attenuate the size of the transmission voice. The gain given when the voice packet is sent from the VOIPDB is set.	0-40 (-20 ~ +20) 0 = -20 dbm 1 = -19 dbm : 20 = 0 dbm : 39 = 19 dbm 40 = 20 dbm	20
31	RX (Receive) Gain Define the setting to amplify and to attenuate the size of the received voice. The gain given when the voice packet is received from the VOIPDB is set.	0-40 (-20~+20) 0 = -20 dbm 1 = -19 dbm : 20 = 0 dbm : 39 = 19 dbm 40 = 20 dbm	20
32	-- Not Used --		
33	Priority Codec Setting The option selected here determines what other codec options are applied by priority.	0 = G711 PT 1 = G723 PT 2 = G729 PT 3 = G.722_PT	0

Program 84 : Hardware Setup for VoIP

84-01 : Codec Information Basic Setup

Item No.	Item	Input Data	Default
34	Bandwidth Control Controls the voice bandwidth on an H.323 trunk.	0 = Disable 1 = Enable	0
35	Maximum Bandwidth The maximum total bandwidth limitation for voice packets.	0-65535 kbps	0
36	Maximum Fax Transmission Rate	24 = V.27ter, 2400 bps 48 = V.27ter, 4800 bps 72 = V.29, 7200 bps 96 = V.29, 9600 bps 120 = V17, 12000 bps 144 = V.17, 14400 bps	5
37	Fax Payout FIFO Nominal Delay Increase the value for networks which experience large packet losses.	0-600 ms	300 ms
38	Fax Packet Size	20-48 bytes	20
39	Fax Modem Transmit Level	0-13 0dBm ~ -13dBm	9 (-9dBm)
40	Fax Modem CD Threshold	0 = -26dBm 1 = -33dBm 2 = -43dBm	1
41	Fax No Activity Timeout Duration	10-32000 sec	30
42	Fax Signal Transmission Method T.38/TRP UDP Voice-Fax Close-Reopen	0 = Open Channel Defined Packet Encapsulation 1 = T.38 UDP 2 = T.38/TRP UDP	1
43	High Speed Data Packet Rate (fax picture signal)	1 = 10ms 2 = 20ms 3 = 30ms 4 = 40ms	4
44	Low Speed Data Redundancy (fax procedure signal)	0-5	0
45	High Speed Data Redundancy (fax picture signal)	0-2	0
46	TCF Handling Method For H.323 negotiation.	1 = TCF is Locally Gen- erated and Checked 2 = TCF is Sent Over the Network	1
47	Maximum Low Speed Data Packetization	1 ~ 65535 bytes	1
48	Transmit Network Timeout	10-32000 sec	150 sec
49	Eflag Start Timer	0-65535	2600 ms
50	Eflag Stop Timer	0-65535	2300 ms

Program 84 : Hardware Setup for VoIP

84-01 : Codec Information Basic Setup

Item No.	Item	Input Data	Default
51	Fax Relay: Scan Line Fix Up Feature	0 = Disable 1 = Enable	1
52	Fax Relay: Eflags for First DIS	0 = Disable 1 = Enable	1
53	Fax Relay: FOP Protocol Enhancement	0 = Disable 1 = Enable	1
54	Fax Relay: NSF Override	0 = Disable 1 = Enable	0
55	ECM (Error Correction Mode)	0 = Disable 1 = Enable	1
56	MR (Modified Read) Page Compression	0 = Disable 1 = Enable	1
57	NSF Country Code Fax Relay - NSF Override Disable	0-65535	0
58	NSF Vendor Code Fax Relay - NSF Override Disable	0-65535	0
59	Fax Relay Function Determine whether or not the Fax Relay function should be used. With the terminal type set to "1" in Program 15-03-03, Each Port Mode can be used. The fax relay is executed only for a single terminal, S-Bus, trunk or the special network.	0 = Disable 1 = Enable 2 = Each Port Mode	0
60	Echo Canceller Config Type The type is defined in Program 84-17. <ul style="list-style-type: none"> • 0: Automatic If the call is analog (e.g. COIU or 2-wire tie line) then this selects the echo canceller profile configured in Program 84-17 Type 4 ("Analog Path Setting"). Any other call selects the echo canceller profile configured in Program 84-17 Type 5 ("Digital Path Setting"). Note that the 4-wire tie line is treated as digital. • 1: Type 1 This selects the echo canceller profile configured in Program 84-17 Type 1. • 2: Type 2 This selects the echo canceller profile configured in Program 84-17 Type 2. • 3: Type 3 This selects the echo canceller profile configured in Program 84-17 Type 3. 	0 = Auto 1 = Type 1 2 = Type 2 3 = Type 3	0
61	Echo Auto Gain Control	0 - 5	0
62	H.323 DTMF Payload Number Define the H.323 DTMF Payload Number. With the DTMF mode set to 0, the set-up information set by 84-06-10 is used for the VOIPDB. This option gives priority if set to either of 1, 2, 3.	0 = VOIPDB 1 = RFC2833 2 = H.245 3 = Disable	0

Program 84 : Hardware Setup for VoIP

84-01 : Codec Information Basic Setup

Item No.	Item	Input Data	Default
63	G.722 Audio Frame Maximum number of G.722 Audio Frames. G.722 assumes the audio signal made by a specimen by 16kHz and the frame of 10ms is assumed to be a unit to 64kbps by the encoding compressed method.	1 = 10 ms 2 = 20 ms 3 = 30 ms 4 = 40 ms	3
64	G.722 Silence Compression Mode Select whether to compress silence with G.722. When there is silence, the RTP packet is not sent.	0 = Disable 1 = Enable	0
65	G.722 Jitter Buffer - Minimum Set the minimum value of the Jitter Buffer of G.722 is set. Jitter is the variation in the time between packets arriving and the buffer allows this variation to be absorbed.	0-160 ms	30
66	G.722 Jitter Buffer - Standard Set the average G.722 Jitter Buffer.	0-160 ms	60
67	G.722 Jitter Buffer - Maximum Set the maximum G.722 Jitter Buffer.	0-160 ms	120
68	G.726 Audio Frame Maximum number of G.726 Audio Frames. G.726 assumes the audio signal made by a specimen by 16kHz and the frame of 10ms is assumed to be a unit to 32kbps by the encoding compressed method.	1 = 10 ms 2 = 20 ms 3 = 30 ms 4 = 40 ms	3
69	G.726 Silence Compression Mode Select whether to compress silence with G.726. When there is silence, the RTP packet is not sent.	0 = Disable 1 = Enable	0
70	G.726 Jitter Buffer - Minimum Set the minimum value of the Jitter Buffer of G.726 is set. Jitter is the variation in the time between packets arriving and the buffer allows this variation to be absorbed.	0-160 ms	30
71	G.726 Jitter Buffer - Standard Set the average G.726 Jitter Buffer.	0-160 ms	60
72	G.726 Jitter Buffer - Maximum Set the maximum G.726 Jitter Buffer.	0-160 ms	120
73	iLBC Audio Frame Maximum number of iLBC Audio Frames. iLBC assumes the frame of 10ms is a unit.	2 = 20 ms 3 = 30 ms 4 = 40 ms	3
74	iLBC Silence Compression Mode Select whether to compress silence with iLBC. When there is silence, the RTP packet is not sent.	0 = Disable 1 = Enable	0
75	iLBC Jitter Buffer - Minimum Set the minimum value of the Jitter Buffer of iLBC is set. Jitter is the variation in the time between packets arriving and the buffer allows this variation to be absorbed.	0-160 ms	30

Program 84 : Hardware Setup for VoIP

84-11 : Dterm IP Codec Information Basic Setup

Level:

IN

Feature Availability

- Available.

Description

Use **Program 84-11 : Dterm IP Codec Information Basic Setup** to setup the basic codec options for the Dterm IP terminal.

Input Data

Type	1 = Type 1 2 = Type 2 3 = Type 3 4 = Type 4 5 = Type 5
------	--

Item No.	Item	Input Data	Default
01	Number of G.711 Audio Frame Maximum number of G711 Audio Frames. When the voice is encoded using the PCM (Pulse Code Modulation) method, a unit is a frame of 10ms.	1 = 10 ms 2 = 20 ms 3 = 30 ms 4 = 40 ms	3
02	G.711 Silence Detection (VAD) Mode Select whether to compress silence with G.711. When there is silence, the RTP packet is not sent.	0 = Disable 1 = Enable	0
03	G.711 Type Set the type of G.711.	0 = A-law 1 = μ -law	1
04	G.711 Jitter Buffer - Minimum Set the minimum value of the G.711 Jitter Buffer. Moreover, this option is adjusted with the UX5000 as it is used by both IP terminals and the VOIPDB and the range of the adjustment of Jitter for the IP terminal is narrower and transmitted to the IP terminal. The range of IP terminal is 10-300 (10).	0-160 ms	30
05	G.711 Jitter Buffer - Standard Set the average value of the G.711 Jitter Buffer. Moreover, this option is adjusted with the UX5000 as it is used by both IP terminals and the VOIPDB and the range of the adjustment of Jitter for the IP terminal is narrower and transmitted to the IP terminal. The range of IP terminal is 10-300 (10).	0-160 ms	60
06	G.711 Jitter Buffer - Maximum Set the maximum value of the G.711 Jitter Buffer. Moreover, this option is adjusted with the UX5000 as it is used by both IP terminals and the VOIPDB and the range of the adjustment of Jitter for the IP terminal is narrower and transmitted to the IP terminal. The range of IP terminal is 10-300 (10).	0-160 ms	120

Program 84 : Hardware Setup for VoIP

84-11 : Dterm IP Codec Information Basic Setup

Item No.	Item	Input Data	Default
07	G.729 Audio Frame Maximum number of G729 Audio Frames. G.729 assumes the audio signal made by a specimen by 8kHz and the frame of 10ms is assumed to be a unit to 8kbps by the encoding compressed method.	1-6 (1 = 10ms, 2 = 20ms, etc.)	3
08	G.729 Silence Compression (VAD) Mode Select whether to compress silence with G.729. When there is silence, the RTP packet is not sent.	0 = Disable 1 = Enable	0
09	G.729 Jitter Buffer - Minimum Set the minimum value of the Jitter Buffer of G.729 is set. Jitter is the variation in the time between packets arriving and the buffer allows this variation to be absorbed. Moreover, this option is adjusted with the UX5000 as it is used by both IP terminals and the VOIPDB and the range of the adjustment of Jitter for the IP terminal is narrower and transmitted to the IP terminal. The range of IP terminal is 10-300 (10).	0-270 ms	30
10	G.729 Jitter Buffer - Standard Set the average G.729 Jitter Buffer. Moreover, this option is adjusted with the UX5000 as it is used by both IP terminals and the VOIPDB and the range of the adjustment of Jitter for the IP terminal is narrower and transmitted to the IP terminal. The range of IP terminal is 10-300 (10).	0-270 ms	60
11	G.729 Jitter Buffer - Maximum Set the maximum G.729 Jitter Buffer. Moreover, this option is adjusted with the UX5000 as it is used by both IP terminals and the VOIPDB and the range of the adjustment of Jitter for the IP terminal is narrower and transmitted to the IP terminal. The range of IP terminal is 10-300 (10).	0-270 ms	120
12	Number of G.723 Audio Frame Maximum number of the G.723 Audio Frame (corresponds to 5.3kbps ACELP method).	1 = 30 msec 2 = 60 msec	1
13	G.723 Silence Compression (VAD) Mode If enabled, RTP packets are not sent for the compressed silence.	0 = Disable 1 = Enable	0
14	G.723 Jitter Buffer - Minimum Set the minimum value of the G.723 Jitter Buffer. Moreover, this option is adjusted with the UX5000 as it is used by both IP terminals and the VOIPDB and the range of the adjustment of Jitter for the IP terminal is narrower and transmitted to the IP terminal. The range of IP terminal is 10-300 (10).	0-270 ms	30
15	G.723 Jitter Buffer - Standard Set the average value of the G.723 Jitter Buffer. Moreover, this option is adjusted with the UX5000 as it is used by both IP terminals and the VOIPDB and the range of the adjustment of Jitter for the IP terminal is narrower and transmitted to the IP terminal. The range of IP terminal is 10-300 (10).	0-270 ms	60

Program 84 : Hardware Setup for VoIP

84-11 : Dterm IP Codec Information Basic Setup

Item No.	Item	Input Data	Default
16	<p>G.723 Jitter Buffer - Maximum Set the maximum value of the G.723 Jitter Buffer. Moreover, this option is adjusted with the UX5000 as it is used by both IP terminals and the VOIPDB and the range of the adjustment of Jitter for the IP terminal is narrower and transmitted to the IP terminal. The range of IP terminal is 10-300 (10).</p>	0-270 ms	120
17	<p>Jitter Buffer Mode Set the mode of the Jitter Buffer. 1 = Size set to the fixed (standard) amount for the codec. 2 = The minimum/maximum range for the codec is used. 3 = The minimum/maximum range for the codec is used and adjusts at any time, regardless of silence.</p>	1 = static 2 = adaptive during silence 3 = adaptive immediately	3
18	<p>Silence Compression (VAD) Threshold Set the voice level judged to be silence. Voice level compression -3dB of the standard level is determined to be silence. Change value based -30dB This entry is ignored if silence compression is disabled in 84-01-03 with G.711, or 84-01-06 with G.729. (VAD=Voice Activity Detection)</p>	0-30 (self-adjustment and -19db ~ +10db) 0 = self-adjustment 1:-19db (-49dbm) : 20 = 0db (-30dbm) : 29 = 9dbm (-21dbm) 30:10dbm (-20dbm)	20
19	<p>Idle Noise Level Set the noise level which is generated when silent.</p>	5000-7000 (-5000 ~ -7000dbm) 5000 = -5000dbm : 7000 = -7000dbm	7000
20	<p>Echo Canceller Mode Determine whether or not to use Echo canceller.</p>	0 = Disable 1 = Enable	1
21	<p>Echo Canceller Tail Size Becomes invalid item if 84-11-21 is set to Disabled. Set the decrease echo when delayed.</p>	1 = 4ms 2 = 8ms 3 = 16ms 4 = 32ms 5 = 64ms 6 = 128ms	6
22	<p>Echo Canceller NLP Mode Non-linear processing mode. Enable this option to decrease the low level echo. When NLP is enabled, the voice with low level is replaced with NLP noise. As a result, a low echo of the level is usually removed compared with the conversation level.</p>	0 = Disable 1 = Enable	1
23	- Not Used -	-	-

Program 84 : Hardware Setup for VoIP

84-11 : Dterm IP Codec Information Basic Setup

Item No.	Item	Input Data	Default
24	Echo Canceller NLP Noise Setting Becomes invalid item if 84-11-22 is set to Disabled. Set the noise level adjusting method added with NLP. When "0" is set, the level is self-adjusted - when "1" is set, Program 84-11-23 is used.	0 = adaptive 1 = fixed	0
25	- Not Used -	-	-
26	TX (Transmit) Gain Define the setting to amplify and to attenuate the size of the transmission voice. The gain given when the voice packet is sent from the VOIPDB is set.	0-40 (-20 ~ +20) 0 = -20 dbm 1 = -19 dbm : 20 = 0 dbm : 39 = 19 dbm 40 = 20 dbm	20 (0 dbm)
27	RX (Receive) Gain Define the setting to amplify and to attenuate the size of the received voice. The gain given when the voice packet is received from the VOIPDB is set.	0-40 (-20 ~ +20) 0 = -20 dbm 1 = -19 dbm : 20 = 0 dbm : 39 = 19 dbm 40 = 20 dbm	20 (0 dbm)
28	Priority Codec Setting The option selected here determines what other codec options are applied by priority.	0 = G711 PT 1 = G723 PT 2 = G729 PT	0
29	Echo Canceller Config Type The type is defined in Program 84-17. <ul style="list-style-type: none"> • 0: Automatic If the call is analog (e.g. COIU or 2-wire tie line) then this selects the echo canceller profile configured in Program 84-17 Type 4 ("Analog Path Setting"). Any other call selects the echo canceller profile configured in Program 84-17 Type 5 ("Digital Path Setting"). Note that the 4-wire tie line is treated as digital. • 1: Type 1 This selects the echo canceller profile configured in Program 84-17 Type 1. • 2: Type 2 This selects the echo canceller profile configured in Program 84-17 Type 2. • 3: Type 3 This selects the echo canceller profile configured in Program 84-17 Type 3. 	0 = Auto 1 = Type 1 2 = Type 2 3 = Type 3	0
30	Echo Auto Gain Control	0 - 5	0
31	Check Sum Mode Set whether UDP Check Sum of the RTP packet is used.	0 = Disabled 1 = Enable	1

84-12 : Networking Codec Information Basic Setup

Item No.	Item	Input Data	Default
22	Echo Canceller NLP Mode Non-linear processing mode. Enable this option to decrease the low level echo. When NLP is enabled, the voice with low level is replaced with NLP noise. As a result, a low echo of the level is usually removed compared with the conversation level.	0 = Disable 1 = Enable	1
23	- Not Used -	-	-
24	Echo Canceller NLP Noise Setting Becomes invalid item if 84-12-22 is set to Disabled. Set the noise level adjusting method added with NLP. When "0" is set, the level is self-adjusted - when "1" is set, Program 84-12-23 is used.	0 = adaptive 1 = fixed	0
25	- Not Used -	-	-
26	TX (Transmit) Gain Define the setting to amplify and to attenuate the size of the transmission voice. The gain given when the voice packet is sent from the VOIPDB is set.	0-40 (-20 ~ +20) 0 = -20 dbm 1 = -19 dbm : 20 = 0 dbm : 39 = 19 dbm 40 = 20 dbm	20 (0 dbm)
27	RX (Receive) Gain Define the setting to amplify and to attenuate the size of the received voice. The gain given when the voice packet is received from the VOIPU is set.	0-40 (-20~+20) 0 = -20 dbm 1 = -19 dbm : 20 = 0 dbm : 39 = 19 dbm 40 = 20 dbm	20 (0 dbm)
28	Priority Codec Setting The option selected here determines what other codec options are applied by priority.	0 = G711 PT 1 = G723 PT 2 = G729 PT 3 = G.722 PT	0

Program 84 : Hardware Setup for VoIP

84-12 : Networking Codec Information Basic Setup

Item No.	Item	Input Data	Default
29	<p>Echo Canceller Config Type The type is defined in Program 84-17.</p> <ul style="list-style-type: none"> • 0: Automatic If the call is analog (e.g. COIU or 2-wire tie line) then this selects the echo canceller profile configured in Program 84-17 Type 4 (“Analog Path Setting”). Any other call selects the echo canceller profile configured in Program 84-17 Type 5 (“Digital Path Setting”). Note that the 4-wire tie line is treated as digital. • 1: Type 1 This selects the echo canceller profile configured in Program 84-17 Type 1. • 2: Type 2 This selects the echo canceller profile configured in Program 84-17 Type 2. • 3: Type 3 This selects the echo canceller profile configured in Program 84-17 Type 3. 	0 = Auto 1 = Type 1 2 = Type 2 3 = Type 3	0
30	Echo Auto Gain Control	0 - 5	0
31	<p>DTMF Relay Mode The initial setup information for the VOIPDB is set in Program 84-27-02. If this option is set to either 0 or 1, priority is given.</p>	0 = Disable 1 = RFC2833 2 = VOIPDB	2
32	<p>FAX Relay Select "2" for FAX Relay to SLT (Program 15-03-03:special), Trunk and CygniLink.</p> <p>Refer to Program 84-01-36 through 84-01-58 for FAX Relay options.</p>	0 = Disable 1 = Enable 2 = Each Port Mode	0
33	<p>G.722 Audio Frame Maximum number of G.722 Audio Frames. G.722 assumes the audio signal made by a specimen by 16kHz and the frame of 10ms is assumed to be a unit to 64kbps by the encoding compressed method.</p>	1 = 10 ms 2 = 20 ms 3 = 30 ms 4 = 40 ms	3
34	<p>G.722 Silence Compression Mode Select whether to compress silence with G.722. When there is silence, the RTP packet is not sent.</p>	0 = Disable 1 = Enable	0
35	<p>G.722 Jitter Buffer - Minimum Set the minimum value of the Jitter Buffer of G.722 is set. Jitter is the variation in the time between packets arriving and the buffer allows this variation to be absorbed.</p>	0-160 ms	30
36	<p>G.722 Jitter Buffer - Standard Set the average G.722 Jitter Buffer.</p>	0-160 ms	60
37	<p>G.722 Jitter Buffer - Maximum Set the maximum G.722 Jitter Buffer.</p>	0-160 ms	120
38	<p>G.726 Audio Frame Maximum number of G.726 Audio Frames. G.726 assumes the audio signal made by a specimen by 16kHz and the frame of 10ms is assumed to be a unit to 32kbps by the encoding compressed method.</p>	1 = 10 ms 2 = 20 ms 3 = 30 ms 4 = 40 ms	3

Program 84 : Hardware Setup for VoIP

84-12 : Networking Codec Information Basic Setup

Item No.	Item	Input Data	Default
39	G.726 Silence Compression Mode Select whether to compress silence with G.726. When there is silence, the RTP packet is not sent.	0 = Disable 1 = Enable	0
40	G.726 Jitter Buffer - Minimum Set the minimum value of the Jitter Buffer of G.726 is set. Jitter is the variation in the time between packets arriving and the buffer allows this variation to be absorbed.	0-160 ms	30
41	G.726 Jitter Buffer - Standard Set the average G.726 Jitter Buffer.	0-160 ms	60
42	G.726 Jitter Buffer - Maximum Set the maximum G.726 Jitter Buffer.	0-160 ms	120
43	iLBC Audio Frame Maximum number of iLBC Audio Frames. iLBC assumes the frame of 10ms is a unit.	2 = 20 ms 3 = 30 ms 4 = 40 ms	3
44	iLBC Silence Compression Mode Select whether to compress silence with iLBC. When there is silence, the RTP packet is not sent.	0 = Disable 1 = Enable	0
45	iLBC Jitter Buffer - Minimum Set the minimum value of the Jitter Buffer of iLBC is set. Jitter is the variation in the time between packets arriving and the buffer allows this variation to be absorbed.	0-160 ms	30
46	iLBC Jitter Buffer - Standard Set the average iLBC Jitter Buffer.	0-160 ms	60
47	iLBC Jitter Buffer - Maximum Set the maximum iLBC Jitter Buffer.	0-160 ms	120

Terminal Programming Instructions

To enter data for Program 84-12 (Networking Codec Information Basic Setup):

1. Enter the programming mode.
2. 84 12

```
84-12-01
G711 Audio Frame 3
back ↑ ↓ select
```

3. Enter the number of the item you want to program.

```
84-12-nn
nnnnn
← →
```

4. Enter data for the item you selected + HOLD.
5. Enter data for the next item in the program.
OR
Press MIC once to enter a new item number.
OR
Press MIC until you've exited that series's programming section.

Program 84 : Hardware Setup for VoIP

84-13 : SIP Trunk Codec Information Basic Setup

Level:

IN

Feature Availability

- Available.

Description

Use **Program 84-13 : SIP Trunk Codec Information Basic Setup** to setup the basic codec options for SIP trunks.

Input Data

Item No.	Item	Input Data	Default
01	Number of G.711 Audio Frame Maximum number of G711 Audio Frames. When the voice is encoded using the PCM (Pulse Code Modulation) method, a unit is a frame of 10ms.	1 = 10 ms 2 = 20 ms 3 = 30 ms 4 = 40 ms	2
02	G.711 Silence Detection (VAD) Mode Select whether to compress silence with G.711. When there is silence, the RTP packet is not sent.	0 = Disable 1 = Enable	0
03	G.711 Type Set the type of G.711.	0 = A-law 1 = μ -law	1
04	G.711 Jitter Buffer - Minimum Set the minimum value of the G.711 Jitter Buffer.	0~160 ms	20
05	G.711 Jitter Buffer - Standard Set the average value of the G.711 Jitter Buffer.	0~160 ms	40
06	G.711 Jitter Buffer - Maximum Set the maximum value of the G.711 Jitter Buffer.	0~160 ms	80
07	G.729 Audio Frame Maximum number of G729 Audio Frames. G.729 assumes the audio signal made by a specimen by 8kHz and the frame of 10ms is assumed to be a unit to 8kbps by the encoding compressed method.	1-6 (1 = 10ms, 2 = 20ms, etc.)	2
08	G.729 Silence Compression (VAD) Mode Select whether to compress silence with G.729. When there is silence, the RTP packet is not sent.	0 = Disable 1 = Enable	0
09	G.729 Jitter Buffer - Minimum Set the minimum value of the Jitter Buffer of G.729 is set. Jitter is the variation in the time between packets arriving and the buffer allows this variation to be absorbed.	0-270 ms	20
10	G.729 Jitter Buffer - Standard Set the average G.729 Jitter Buffer.	0-270 ms	40
11	G.729 Jitter Buffer - Maximum Set the maximum G.729 Jitter Buffer.	0-270 ms	80

Program 84 : Hardware Setup for VoIP

84-13 : SIP Trunk Codec Information Basic Setup

Item No.	Item	Input Data	Default
12	Number of G.723 Audio Frame Maximum number of the G.723 Audio Frame.	1 = 30 msec 2 = 60 msec	1
13	G.723 Silence Compression (VAD) Mode If enabled, RTP packets are not sent for the compressed silence.	0 = Disable 1 = Enable	0
14	G.723 Jitter Buffer - Minimum Set the minimum value of the G.723 Jitter Buffer.	0~270 ms	30
15	G.723 Jitter Buffer - Standard Set the average value of the G.723 Jitter Buffer.	0~270 ms	60
16	G.723 Jitter Buffer - Maximum Set the maximum value of the G.723 Jitter Buffer.	0~270 ms	120
17	Jitter Buffer Mode Set the mode of the Jitter Buffer. 1 = Size set to the fixed amount for the codec. 2 = The minimum/maximum range for the codec is used. 3 = The minimum/maximum range for the codec is used and adjusts at any time, regardless of silence.	1 = static 2 = adaptive during silence 3 = adaptive immediately	3
18	Silence Compression (VAD) Threshold Set the voice level judged to be silence. Change value based -30 This entry is ignored if silence compression is disabled in 84-01-03 with G.711, or 84-01-06 with G.729.	0-30 (self-adjustment and -19db ~ +10db) 0 = self-adjustment 1:-19db (-49dbm) : 20 = 0db (-30dbm) : 29 = 9dbm (-21dbm) 30:10dbm (-20dbm)	20
19	Idle Noise Level Set the noise level which is generated when silent.	5000-7000 (-5000 ~ -7000dbm) 5000 = -5000dbm : 7000 = -7000dbm	7000
20	Echo Canceller Mode Determine whether or not to use Echo canceller.	0 = Disable 1 = Enable	1
21	Echo Canceller Tail Size Becomes invalid item if 84-13-20 is set to Disabled. Set the decrease echo when delayed.	1 = 4ms 2 = 8ms 3 = 16ms 4 = 32ms 5 = 64ms 6 = 128ms	6

Program 84 : Hardware Setup for VoIP

84-13 : SIP Trunk Codec Information Basic Setup

Item No.	Item	Input Data	Default
22	<p>Echo Canceller NLP Mode Non-linear processing mode. Enable this option to decrease the low level echo. When NLP is enabled, the voice with low level is replaced with NLP noise. As a result, a low echo of the level is usually removed compared with the conversation level.</p>	0 = Disable 1 = Enable	1
23	- Not Used -	-	-
24	<p>Echo Canceller NLP Noise Setting Becomes invalid item if 84-12-22 is set to Disabled. Set the noise level adjusting method added with NLP. When "0" is set, the level is self-adjusted - when "1" is set, Program 84-13-23 is used.</p>	0 = adaptive 1 = fixed	0
25	- Not Used -	-	-
26	<p>TX (Transmit) Gain Define the setting to amplify and to attenuate the size of the transmission voice. The gain given when the voice packet is sent from the VOIPDB is set.</p>	0-40 (-20 ~ +20) 0 = -20 dbm 1 = -19 dbm : 20 = 0 dbm : 39 = 19 dbm 40 = 20 dbm	20 (0 dbm)
27	<p>RX (Receive) Gain Define the setting to amplify and to attenuate the size of the received voice. The gain given when the voice packet is received from the VOIPDB is set.</p>	0-40 (-20~+20) 0 = -20 dbm 1 = -19 dbm : 20 = 0 dbm : 39 = 19 dbm 40 = 20 dbm	20 (0 dbm)
28	<p>Priority Codec Setting The option selected here determines what other codec options are applied by priority.</p>	0 = G711 PT 1 = G723 PT 2 = G729 PT 3 = G.722 PT 4 = G.726 PT 5 = iLBC PT	0

Program 84 : Hardware Setup for VoIP

84-13 : SIP Trunk Codec Information Basic Setup

Item No.	Item	Input Data	Default
29	<p>Echo Canceller Config Type The type is defined in Program 84-17.</p> <ul style="list-style-type: none"> • 0: Automatic If the call is analog (e.g. COIU or 2-wire tie line) then this selects the echo canceller profile configured in Program 84-17 Type 4 (“Analog Path Setting”). Any other call selects the echo canceller profile configured in Program 84-17 Type 5 (“Digital Path Setting”). Note that the 4-wire tie line is treated as digital. • 1: Type 1 This selects the echo canceller profile configured in Program 84-17 Type 1. • 2: Type 2 This selects the echo canceller profile configured in Program 84-17 Type 2. • 3: Type 3 This selects the echo canceller profile configured in Program 84-17 Type 3. 	<p>0 = Auto 1 = Type 1 2 = Type 2 3 = Type 3</p>	0
30	<p>EchoAuto Gain Control Define the Auto Gain Control.</p>	0 - 5	0
31	<p>DTMF Payload Number Define the DTMF Payload Number.</p>	96-127	110
32	<p>DTMF Relay Mode Determine the DTMF setup.</p>	<p>0 = Disable 1 = RFC2833</p>	0
33	<p>G.722 Audio Frame Maximum number of G.722 Audio Frames. G.722 assumes the audio signal made by a specimen by 16kHz and the frame of 10ms is assumed to be a unit to 64kbps by the encoding compressed method.</p>	<p>1 = 10 ms 2 = 20 ms 3 = 30 ms 4 = 40 ms</p>	3
34	<p>G.722 Silence Compression Mode Select whether to compress silence with G.722. When there is silence, the RTP packet is not sent.</p>	<p>0 = Disable 1 = Enable</p>	0
35	<p>G.722 Jitter Buffer - Minimum Set the minimum value of the Jitter Buffer of G.722 is set. Jitter is the variation in the time between packets arriving and the buffer allows this variation to be absorbed.</p>	0-160 ms	30
36	<p>G.722 Jitter Buffer - Standard Set the average G.722 Jitter Buffer.</p>	0-160 ms	60
37	<p>G.722 Jitter Buffer - Maximum Set the maximum G.722 Jitter Buffer.</p>	0-160 ms	120
38	<p>G.726 Audio Frame Maximum number of G.726 Audio Frames. G.726 assumes the audio signal made by a specimen by 16kHz and the frame of 10ms is assumed to be a unit to 32kbps by the encoding compressed method.</p>	<p>1 = 10 ms 2 = 20 ms 3 = 30 ms 4 = 40 ms</p>	3

Program 84 : Hardware Setup for VoIP

84-13 : SIP Trunk Codec Information Basic Setup

Item No.	Item	Input Data	Default
39	G.726 Silence Compression Mode Select whether to compress silence with G.726. When there is silence, the RTP packet is not sent.	0 = Disable 1 = Enable	0
40	G.726 Jitter Buffer - Minimum Set the minimum value of the Jitter Buffer of G.726 is set. Jitter is the variation in the time between packets arriving and the buffer allows this variation to be absorbed.	0-160 ms	30
41	G.726 Jitter Buffer - Standard Set the average G.726 Jitter Buffer.	0-160 ms	60
42	G.726 Jitter Buffer - Maximum Set the maximum G.726 Jitter Buffer.	0-160 ms	120
43	iLBC Audio Frame Maximum number of iLBC Audio Frames. iLBC assumes the frame of 10ms is a unit.	2 = 20 ms 3 = 30 ms 4 = 40 ms	3
44	iLBC Silence Compression Mode Select whether to compress silence with iLBC. When there is silence, the RTP packet is not sent.	0 = Disable 1 = Enable	0
45	iLBC Jitter Buffer - Minimum Set the minimum value of the Jitter Buffer of iLBC is set. Jitter is the variation in the time between packets arriving and the buffer allows this variation to be absorbed.	0-160 ms	30
46	iLBC Jitter Buffer - Standard Set the average iLBC Jitter Buffer.	0-160 ms	60
47	iLBC Jitter Buffer - Maximum Set the maximum iLBC Jitter Buffer.	0-160 ms	120
48	iLBC Payload Number The payload number of iLBC is set. However, the same number as Item 31 cannot be set.	96-127	98

Press MIC until you've exited that series's programming section.

Program 84 : Hardware Setup for VoIP

84-14 : SIP Trunk Basic Information Setup

Level:

IN

Feature Availability

- Available.

Description

Use **Program 84-14 : SIP Trunk Basic Information Setup** to define the basic setup for SIP trunks.

Input Data

Item No.	Item	Input Data	Default
01	INVITE ReTx Count Set the INVITE Re TX Count.	0-255	7
02	Request ReTX Count Set the Request Re TX Count.	0-255	11
03	Response ReTX Count Set the Response Re TX Count.	0-255	7
04	Request ReTX Start Time Set the Request Re TX Start Time.	0-65535 (0ms-6553.5 seconds)	5 (500ms)
05	Request MAX ReTX Interval Set the Request MAX Re TX Interval.	0-65535 (0ms-6553.5 seconds)	40 (4000ms)
06	SIP Trunk Port Set the SIP Trunk source port number (Receiving Transport for UX5000 SIP). This cannot be the same port as Program 84-20-01 registrar/proxy ports.	1-65535	5060
07	Session Timer Value Set the Session Timer Value. The value when used should be higher than Program 84-14-08.	0-65535 seconds	0 (0 means "session timer is OFF")
08	Minimum Session Timer Value Set the Minimum Session Timer Value. The default value of 1800 seconds is the recommended value.	0-65535 seconds	1800 seconds
09	Called Party Information Set the Called Party Information.	0 = Request URI 1 = To header	0
10	URL Type Select either SIP URL (0) or TEL URL (1) for SIP Initial INVITE.	0 = SIP URL 1 = TEL URL	0

Program 84 : Hardware Setup for VoIP

84-19 : SIP Extension Codec Information Basic Setup

Level:

IN

Feature Availability

- Available.

Description

Use **Program 84-19 : SIP Extension Codec information Basic Setup** to define the codec information for the SIP extensions.

Input Data

Item No.	Item	Input Data	Default
01	Number of G.711 Audio Frame Maximum number of G711 Audio Frames. When the voice is encoded using the PCM (Pulse Code Modulation) method, a unit is a frame of 10ms.	1 = 10 ms 2 = 20 ms 3 = 30 ms 4 = 40 ms	2
02	G.711 Silence Detection (VAD) Mode Select whether to compress silence with G.711. When there is silence, the RTP packet is not sent.	0 = Disable 1 = Enable	0
03	G.711 Type Set the type of G.711.	0 = A-law 1 = μ -law	1
04	G.711 Jitter Buffer - Minimum Set the minimum value of the G.711 Jitter Buffer.	0~160 ms	20
05	G.711 Jitter Buffer - Standard Set the average value of the G.711 Jitter Buffer.	0~160 ms	40
06	G.711 Jitter Buffer - Maximum Set the maximum value of the G.711 Jitter Buffer.	0~160 ms	80
07	G.729 Audio Frame Maximum number of G729 Audio Frames. G.729 assumes the audio signal made by a specimen by 8kHz and the frame of 10ms is assumed to be a unit to 8kbps by the encoding compressed method.	1-6 (1 = 10ms, 2 = 20ms, etc.)	2
08	G.729 Silence Compression (VAD) Mode Select whether to compress silence with G.729. When there is silence, the RTP packet is not sent.	0 = Disable 1 = Enable	0
09	G.729 Jitter Buffer - Minimum Set the minimum value of the Jitter Buffer of G.729 is set. Jitter is the variation in the time between packets arriving and the buffer allows this variation to be absorbed.	0-270 ms	20
10	G.729 Jitter Buffer - Standard Set the average G.729 Jitter Buffer.	0-270 ms	40
11	G.729 Jitter Buffer - Maximum Set the maximum G.729 Jitter Buffer.	0-270 ms	80

Program 84 : Hardware Setup for VoIP

Program 84 : Hardware Setup for VoIP

84-19 : SIP Extension Codec Information Basic Setup

Terminal Programming Instructions

To enter data for Program 84-19 (SIP Extension Codec Information Setup):

1. Enter the programming mode.
2. 84 19

```
84-19-01
G711 Audio Frame 3
back ↑ ↓ select
```

3. Enter the number of the item you want to program.

```
84-19-nn
nnnnn
← →
```

4. Enter data for the item you selected + HOLD.
5. Enter data for the next item in the program.
OR
Press MIC once to enter a new item number.
OR
Press MIC until you've exited that series's programming section.

Program 84 : Hardware Setup for VoIP

84-20 : SIP Extension Basic Information Setup

Level:

IN

Feature Availability

- Available.

Description

Use **Program 84-20 : SIP Extension Basic Information Setup** to define the basic options for the SIP extensions.

Input Data

Item No.	Item	Input Data	Default
01	Registrar/Proxy Port Set the Registrar/Proxy Port. (This entry should not be the same as the port entry in Program 84-14-06.)	1-65535	5070
02	Session Timer Value Set the Session Timer Value. This value should be higher than the entry made in Program 84-20-03.	0-65535 (0=session timer is OFF)	180
03	Minimum Session Timer Value Set the Minimum Session Timer. This entry is used unless Program 84-20-02 is set to "0". The recommended value is 180.	0-180 seconds	180
04	Called Party Information Set the Called Party Information.	0=Request URI 1=TO header	0
05	Expire Value of Invite Set the Expire Value of Invite. Arrival of a message is ended when this time is exceeded and there is no response from the call.	0-256 seconds	180
06	Expire Value of Invite (Send) Set the Expire Value of Invite (send).	0-3600 seconds	180

Program 84 : Hardware Setup for VoIP

84-22 : DT700 Logon Information Setup

Level:
IN

Feature Availability

- Available.

Description

Use **Program 84-22 : DT700 Logon Information Setup** to define the log on information for DT700 terminals. This program is used only when “Automatic Logon” is set in Program 10-46-01.

Input Data

Personal ID Index	1-512
-------------------	-------

Item No.	Item	Input Data	Default
01	<p>Personal User ID Define the personal ID for the extension when log on is set.</p> <p>This option is only used when Program 10-46-01 is set to “Auto” or “Manual”.</p>	Up to 32 Alphanumeric Characters	None
02	<p>Password Define the password for the extension when log on is set.</p> <p>This option is only used when Program 10-46-01 is set to “Auto” or “Manual”.</p> <p>The entry displays as “*” when entered.</p>	Up to 16 Alphanumeric Characters	None
03	<p>Personal User ID Omission Determine whether the personal ID for a terminal is automatically entered when logging on again.</p> <p>This option is only used when Program 10-46-01 is set to “Manual”.</p>	0 = Off 1 = On	0
04	<p>Log Off Define whether a user will be required to log off.</p> <p>This option is only used when Program 10-46-01 is set to “Manual”.</p>	0 = Off 1 = On	1
05	<p>Nickname Define the name related to personal ID that is viewable to other users.</p> <p>Each nickname should be unique in the UX5000.</p>	Up to 32 Alphanumeric Characters	None

Terminal Programming Instructions

To enter data for Program 84-22 (DT700 Logon Information Setup):

1. Enter the programming mode.
2. 84 22

```
84-22-01  UserID1
UserID  -
back  ↑      ↓  select
```

3. Enter the number of the item you want to program.

```
84-22-nn  UserIDn
nnnnn
←          →
```

4. Enter the User ID number to be defined or press FLASH to use the displayed entry.
5. Enter data for the item you selected + HOLD.
6. Enter data for the next item in the program.
OR
Press MIC once to enter a new item number.
OR
Press MIC until you've exited that series's programming section.

Program 84 : Hardware Setup for VoIP

84-23 : DT700 Basic Information Setup

Level:

IN

Feature Availability

- Available.

Description

Use **Program 84-23 : DT700 Basic Information Setup** to set the basic information for DT700 terminals.

Input Data

Item No.	Item	Input Data	Default
01	Registration Expires Timer When outside an effective range or the Expire value is not set, determine how long the UX5000 should wait before the registration expires for a DT700 terminal.	60 - 65535 (sec)	180
02	Subscribe Expires Timer Set the timer for a session to send and receive the terminal operation instructions between a main device and the DT700 terminal.	60 - 65535 (sec)	3600
03	Session Expires Timer Define how long a session will last without voice. An entry of "0" disables this option. This value should be set higher than Program 84-23-04.	0 - 65535 (sec)	180
04	Minimum Session Expires Timer Set the minimum value of time the UX5000 waits for the voice. This option is used except when Program 84-23-03 is set to "0".	0 - 65535(sec)	180
05	INVITE Expires Timer Set the Expire Value of Invite. Arrival of a message is ended when this time is exceeded and there is no response from the DT700 terminal.	0 - 65535(sec)	180
06	Signal ToS Set the ToS value applied from the DT700 terminal to the SIP message packet sent to a main device.	0x00 - 0xFF (0~9,A~F)	00
07	LCD Error Display Timer Define the display time of an error message when registration of the DT700 terminal fails.	0 - 65535 (sec) (0 = Until Soft Key pressed)	0
08	Digest Authorization Registration Expires Timer Effective time of the REGISTER message for the Digest Authorization received from the DT700 terminal.	0 - 4294967295 (sec)	0
09	Temporary Password Define the Temporary Password for the encryption.	Character string of 16 characters or less (0~9, a~f, A~F)	None
10	Password Frequency Define the number of times the password can be entered at a protected terminal.	0 = There is no limitation 1-255	0

Program 84 : Hardware Setup for VoIP

84-23 : DT700 Basic Information Setup

Item No.	Item	Input Data	Default
11	Password Lock Time Define the number of times the password can be entered incorrectly at a protected terminal.	0 = There is no limitation 1-255	0
12	Tracking Number Define the Manager's telephone number.	Dial of 32 digits or less (0-9,*,#,P,R,@)	None
13	Media ToS Set the ToS value applied from the DT700 terminal to the RTP packet sent to a main device.	0x00 - 0xFF (0~9,A~F)	00
14	REFER Expires Timer Set the session effective time of UX5000 REFER forwarding.	0 - 65535(sec)	60

Conditions

None

Program 84 : Hardware Setup for VoIP

84-24 : SIP-MLT Codec Information Basic Setup

Terminal Programming Instructions

To enter data for Program 84-24 (SIP-MLT Codec Information Setup):

1. Enter the programming mode.
2. 84 24

```
84-24-01
G711 Audio Frame 3
back ↑ ↓ select
```

3. Enter the number of the item you want to program.

```
84-24-nn
nnnnn
← →
```

4. Enter data for the item you selected + HOLD.
5. Enter data for the next item in the program.
OR
Press MIC once to enter a new item number.
OR
Press MIC until you've exited that series's programming section.

Program 84 : Hardware Setup for VoIP

84-25 : CygniLink Codec Information Basic Setup

Level:

IN

Feature Availability

- Available.

Description

Use **Program 84-25 : CygniLink Codec information Basic Setup** to define the codec information for the CygniLink feature.

Input Data

Item No.	Item	Input Data	Default
01	Number of G.711 Audio Frame Maximum number of G711 Audio Frames. When the voice is encoded using the PCM (Pulse Code Modulation) method, a unit is a frame of 10ms.	1 = 10 ms 2 = 20 ms 3 = 30 ms 4 = 40 ms	3
02	G.711 Silence Detection (VAD) Mode Select whether to compress silence with G.711. When there is silence, the RTP packet is not sent.	0 = Disable 1 = Enable	0
03	G.711 Type Set the type of G.711.	0 = A-law 1 = μ -law	1
04	G.711 Jitter Buffer - Minimum Set the minimum value of the G.711 Jitter Buffer.	0~ ms	30
05	G.711 Jitter Buffer - Standard Set the average value of the G.711 Jitter Buffer.	0~ ms	60
06	G.711 Jitter Buffer - Maximum Set the maximum value of the G.711 Jitter Buffer.	0~ ms	120
07	G.729 Audio Frame Maximum number of G729 Audio Frames. G.729 assumes the audio signal made by a specimen by 8kHz and the frame of 10ms is assumed to be a unit to 8kbps by the encoding compressed method.	1-6 (1 = 10ms, 2 = 20ms, etc.)	3
08	G.729 Silence Compression (VAD) Mode Select whether to compress silence with G.729. When there is silence, the RTP packet is not sent.	0 = Disable 1 = Enable	0
09	G.729 Jitter Buffer - Minimum Set the minimum value of the Jitter Buffer of G.729 is set. Jitter is the variation in the time between packets arriving and the buffer allows this variation to be absorbed.	0- ms	30
10	G.729 Jitter Buffer - Standard Set the average G.729 Jitter Buffer.	0- ms	60
11	G.729 Jitter Buffer - Maximum Set the maximum G.729 Jitter Buffer.	0- ms	120

Program 84 : Hardware Setup for VoIP

84-25 : CygniLink Codec Information Basic Setup

Item No.	Item	Input Data	Default
12	Number of G.723 Audio Frame Maximum number of the G.723 Audio Frame.	1 = 30 msec 2 = 60 msec	1
13	G.723 Silence Compression (VAD) Mode If enabled, RTP packets are not sent for the compressed silence.	0 = Disable 1 = Enable	0
14	G.723 Jitter Buffer - Minimum Set the minimum value of the G.723 Jitter Buffer.	0~ ms	30
15	G.723 Jitter Buffer - Standard Set the average value of the G.723 Jitter Buffer.	0~ ms	60
16	G.723 Jitter Buffer - Maximum Set the maximum value of the G.723 Jitter Buffer.	0~ ms	120
17	Jitter Buffer Mode Set the mode of the Jitter Buffer. 1 = Size set to the fixed amount for the codec. 2 = The minimum/maximum range for the codec is used. 3 = The minimum/maximum range for the codec is used and adjust at any time, regardless of silence.	1 = static 2 = adaptive during silence 3 = adaptive immediately	3
18	Silence Compression (VAD) Threshold Set the voice level judged to be silence. Change value based -30 This entry is ignored if silence compression is disabled in 84-01-03 with G.711, or 84-01-06 with G.729.	0-30 (self-adjustment and -19db ~ +10db) 0 = self-adjustment 1:-19db (-49dbm) : 20 = 0db (-30dbm) : 29 = 9dbm (-21dbm) 30:10dbm (-20dbm)	20
19	Idle Noise Level Set the noise level which is generated when silent.	5000-7000 (-5000 ~ -7000dbm) 5000 = -5000dbm : 7000 = -7000dbm	7000
20	Echo Canceller Mode Determine whether or not to use Echo canceller.	0 = Disable 1 = Enable	1
21	Echo Canceller Tail Size Becomes invalid item if 84-24-20 is set to Disabled. Set the decrease echo when delayed.	1 = 4ms 2 = 8ms 3 = 16ms 4 = 32ms 5 = 64ms 6 = 128ms	6

Program 84 : Hardware Setup for VoIP

84-25 : CygniLink Codec Information Basic Setup

Item No.	Item	Input Data	Default
22	<p>Echo Canceller NLP Mode Non-linear processing mode. Enable this option to decrease the low level echo. When NLP is enabled, the voice with low level is replaced with NLP noise. As a result, a low echo of the level is usually removed compared with the conversation level.</p>	0 = Disable 1 = Enable	1
23	- Not Used -	-	-
24	<p>Echo Canceller NLP Noise Setting Becomes invalid item if 84-24-22 is set to Disabled. Set the noise level adjusting method added with NLP. When "0" is set, the level is self-adjusted - when "1" is set, Program 84-01-27 is used.</p>	0 = adaptive 1 = fixed	0
25	- Not Used -	-	-
26	<p>TX (Transmit) Gain Define the setting to amplify and to attenuate the size of the transmission voice. The gain given when the voice packet is sent from the VOIPDB is set.</p>	0-40 (-20 ~ +20) 0 = -20 dbm 1 = -19 dbm : 20 = 0 dbm : 39 = 19 dbm 40 = 20 dbm	20 (0dbm)
27	<p>RX (Receive) Gain Define the setting to amplify and to attenuate the size of the received voice. The gain given when the voice packet is received from the VOIPDB is set.</p>	0-40 (-20~+20) 0 = -20 dbm 1 = -19 dbm : 20 = 0 dbm : 39 = 19 dbm 40 = 20 dbm	20 (0dbm)
28	<p>Priority Codec Setting The option selected here determines what other codec options are applied by priority.</p>	0 = G711 PT 1 = G723 PT 2 = G729 PT 3 = G.726 4 = G.722 5 = iLBC	0

Program 84 : Hardware Setup for VoIP

84-25 : CygniLink Codec Information Basic Setup

Item No.	Item	Input Data	Default
29	<p>Echo Canceller Config Type The type is defined in Program 84-17.</p> <ul style="list-style-type: none"> • 0: Automatic If the call is analog (e.g. COIU or 2-wire tie line) then this selects the echo canceller profile configured in Program 84-17 Type 4 (“Analog Path Setting”). Any other call selects the echo canceller profile configured in Program 84-17 Type 5 (“Digital Path Setting”). Note that the 4-wire tie line is treated as digital. • 1: Type 1 This selects the echo canceller profile configured in Program 84-17 Type 1. • 2: Type 2 This selects the echo canceller profile configured in Program 84-17 Type 2. • 3: Type 3 This selects the echo canceller profile configured in Program 84-17 Type 3. 	<p>0 = Auto 1 = Type 1 2 = Type 2 3 = Type 3</p>	0
30	<p>EchoAuto Gain Control Define the Auto Gain Control.</p>	0 - 5	0
31	<p>DTMF Relay Mode Determine the DTMF setup. Selecting “1” enables RFC2833 and is initially set in Program 84-27-02.</p>	<p>0 = Disable 1 = Enable</p>	0
32	<p>FAX Relay Select "2" for FAX Relay to SLT (Program 15-03-03:special), Trunk and CygniLink.</p> <p>Refer to Program 84-01-36 through 84-01-58 for FAX Relay options.</p>	<p>0 = Disable 1 = Enable 2 = Each Port Mode</p>	0
33	<p>G.722 Audio Frame Maximum number of G.722 Audio Frames. G.722 assumes the audio signal made by a specimen by 16kHz and the frame of 10ms is assumed to be a unit to 64kbps by the encoding compressed method.</p>	<p>1 = 10 ms 2 = 20 ms 3 = 30 ms 4 = 40 ms</p>	3
34	<p>G.722 Silence Compression Mode Select whether to compress silence with G.722. When there is silence, the RTP packet is not sent.</p>	<p>0 = Disable 1 = Enable</p>	0
35	<p>G.722 Jitter Buffer - Minimum Set the minimum value of the Jitter Buffer of G.722 is set. Jitter is the variation in the time between packets arriving and the buffer allows this variation to be absorbed.</p>	0-160 ms	30
36	<p>G.722 Jitter Buffer - Standard Set the average G.722 Jitter Buffer.</p>	0-160 ms	60
37	<p>G.722 Jitter Buffer - Maximum Set the maximum G.722 Jitter Buffer.</p>	0-160 ms	120

Program 84 : Hardware Setup for VoIP

84-25 : CygniLink Codec Information Basic Setup

Item No.	Item	Input Data	Default
38	G.726 Audio Frame Maximum number of G.726 Audio Frames. G.726 assumes the audio signal made by a specimen by 16kHz and the frame of 10ms is assumed to be a unit to 32kbps by the encoding compressed method.	1 = 10 ms 2 = 20 ms 3 = 30 ms 4 = 40 ms	3
39	G.726 Silence Compression Mode Select whether to compress silence with G.726. When there is silence, the RTP packet is not sent.	0 = Disable 1 = Enable	0
40	G.726 Jitter Buffer - Minimum Set the minimum value of the Jitter Buffer of G.726 is set. Jitter is the variation in the time between packets arriving and the buffer allows this variation to be absorbed.	0-160 ms	30
41	G.726 Jitter Buffer - Standard Set the average G.726 Jitter Buffer.	0-160 ms	60
42	G.726 Jitter Buffer - Maximum Set the maximum G.726 Jitter Buffer.	0-160 ms	120
43	iLBC Audio Frame Maximum number of iLBC Audio Frames. iLBC assumes the frame of 10ms is a unit.	2 = 20 ms 3 = 30 ms 4 = 40 ms	3
44	iLBC Silence Compression Mode Select whether to compress silence with iLBC. When there is silence, the RTP packet is not sent.	0 = Disable 1 = Enable	0
45	iLBC Jitter Buffer - Minimum Set the minimum value of the Jitter Buffer of iLBC is set. Jitter is the variation in the time between packets arriving and the buffer allows this variation to be absorbed.	0-160 ms	30
46	iLBC Jitter Buffer - Standard Set the average iLBC Jitter Buffer.	0-160 ms	60
47	iLBC Jitter Buffer - Maximum Set the maximum iLBC Jitter Buffer.	0-160 ms	120
48	iLBC Payload Number Set the payload number of iLBC. This entry cannot be the same number as Item 31.	96-127	98

Conditions

When any of these program options are changed, the VOIPD will be reset automatically. The UX5000 will allow any active calls to finished and it will prevent any new resources from being secured until the card is reset.

To enter data for Program 84-19 (SIP Extension Codec Information Setup):

1. Enter the programming mode.
2. 84 19

```
84-19-01
G711 Audio Frame 3
back ↑ ↓ select
```

3. Enter the number of the item you want to program.

```
84-19-nn
nnnnn
← →
```

4. Enter data for the item you selected + HOLD.
5. Enter data for the next item in the program.
OR
Press MIC once to enter a new item number.
OR
Press MIC until you've exited that series's programming section.

Program 84 : Hardware Setup for VoIP

84-26 : VOIPDB Setup for Each DSP

Level:

IN

Feature Availability

- Available.

Description

Use **Program 84-26 : VOIPDB Setup for Each DSP** to setup the details for each DSP.

Input Data

Slot Number	1
VoIP Gateway Number	1-8

Item No.	Item	Input Data	Default
01	<p>Internet Protocol Address Only with the CygniLink feature: Define the IP address of each DSP on a VOIPDB.</p> <p>The third byte of an initial value of Internet Protocol address becomes equal with the value of System ID set by 51-01-01. Example: System ID = For Slot1 of one : 172.16.1.20</p>	0.0.0.1 ~ 126.255.255.254 128.0.0.1 ~ 191.255.255.254 192.0.0.1 ~ 223.255.255.254	Slot 1: 172.16.0.20
02	<p>RTP Port Number Set the UPD port number to be used for RTP traffic.</p>	0-65534	GW1: 10020 GW2: 10052 GW3: 10084 GW4: 10116 GW5: 10148 GW6: 10180 GW7: 10212 GW8: 10244
03	<p>RTCP Port Number This must be set to RTP Port Number (item 02) + 1.</p>	RTP Port Number + 1	GW1: 10021 GW2: 10053 GW3: 10085 GW4: 10117 GW5: 10149 GW6: 10181 GW7: 10213 GW8: 10245

Conditions

- The VOIPDB must be reset after making changes to this program or new calls will not be accepted.
- The subnet mask of each DSP core is automatically set by the UX5000 and cannot be set manually.

Program 90 : Maintenance Program

90-02 : Setting the Programming Password

Level:
IN

Feature Availability
<ul style="list-style-type: none"> Available.

Description

Use **Program 90-02 : Setting the Programming Password** to set the UX5000 passwords. For password entry purposes, the UX5000 allows 8 users to be defined. Each user can have a:

- Unique alphanumeric name (up to 10 alphanumeric characters long).
- Password entry of up to 8 digits (using 0-9, # and *)
- Password level

The “IN” level password is used by the “System Installer” for UX5000 programming purposes. The “SA” or “SB” level password cannot access the “IN” level programs. The reverse type (white on black) just beneath the Description heading is the program’s access level. You can only use the program if your access level meets or exceeds the level the program requires. (“SA” level password can access to “SA” or “SB” programs, and “SB” level password can access to “SB” programs only.)

Use UA level password allows all of the user-programmable options to be changed when accessing the UX5000 using the UserPro feature.

!! Caution !!

It is NOT recommended to change this data unnecessarily. If the digits are changed and then forgotten, there may be no normal way to enter the program mode again.

Input Data

User Number	1-8
-------------	-----

Item No.	Item	Input Data
01	User Name	Max. 10 characters
02	Password	Up to 8 digits
03	User Level	0 = Prohibited user 1 = MF (Manufacturer level) 2 = IN (Installer level) 3 = SA (System administrator level 1) 4 = SB (System administrator level 2) 5 = UA (UserPro UA level)

Terminal Programming Instructions

To enter data for Program 90-04 (Load Data):

1. Enter the programming mode.
2. 90 04

```
90-04-01
Data Load YES:1
back ↑ ↓ select
```

3. Enter the number of the item you want to program.

```
90-04-nn
nnnnn
← →
```

4. Enter data for the item you selected + HOLD.
5. Enter data for the next item in the program.
OR
Press MIC once to enter a new item number.
OR
Press MIC until you've exited that series's programming section.

Program 90 : Maintenance Program

90-05 : Slot Control

Level:

IN

Feature Availability

- Available.

Description

Use **Program 90-05 : Slot Control** to reset, delete (uninstall), block or release block for circuit boards (slots 1-24).

Delete allows you to completely uninstall the blade. You might want to do this if you want to remove a blade and plug it into a different slot - and still retain the port assignments. If a different type of interface card is being installed into a slot previously used (example; changing from a COIU to an ESIU blade), the slot should be deleted (option 1) first before installing the new interface card.

Reset allows you to send a reset code.

This program is also used when you wish to block traffic on a blade. This would be used when you wish to remove a blade from the UX5000. Blocking the blade allows active users on the blade to complete their call, but prevents and new users from seizing the extension/trunk on that blade. ***Be sure to release the block once the blade can be used.***

Input Data

System ID	00-50
Menu Number	1 = Delete 2 = Reset 3 = Set Block (Set Busy Out) 4 = Release Block (Reset Busy Out)

Item No.	Item	Input Data
01	Slot Control	Slot Number (0-24)

Conditions

- When you delete or reset a blade, you must first remove it from its slot then run Program 90-05. When reusing the slot for another blade, you must plug the blade in or reset the UX5000 before the UX5000 will use the slot again.
- When a blade is switched to another slot, first remove the blade and delete it using this program. Prior to plugging the blade into its new slot, reset the UX5000. Without resetting the UX5000, there may be issues with port assignment for the blade.
- This program is only available in terminal and WebPro programming.

Feature Cross Reference

None

Program 90 : Maintenance Program

90-05 : Slot Control

Terminal Programming Instructions

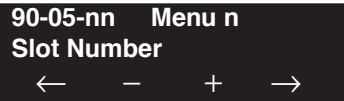

To enter data for Program 90-05 (Slot Control):

1. Enter the programming mode.
2. 90 05

```
90-05-01  Menu 1
Slot Number
back  ↑    ↓  select
```

3. Enter the number of the item you want to program.

```
90-05-nn  Menu n
Slot Number
←    -    +    →
```

4. Enter the Menu number to be defined or press FLASH to use the displayed entry.
5. Enter the slot number for the blade + HOLD.

*The slot is deleted, reset, blocked, or released, depending on the menu option selected.
If the blade is deleted, the display will advance to 90-06.*

6. Press MIC once to enter a new item number.
OR
Press MIC until you've exited that series's programming section.

Program 90 : Maintenance Program

90-06 : Trunk Control

Level:

SA

Feature Availability

- Available.

Description

Use **Program 90-06 : Trunk Control** is used for the trunk maintenance. Busy Out lets you block a blade from placing outgoing calls (just like placing the blade switch down). Once busied out, none of the ports on the blade can be used for new calls. Existing calls, however, are not torn down.

Input Data

Menu Number	0 = Set Busy Out 1 = Reset/Release Busy Out
-------------	--

Item No.	Item	Input Data	Default
01	Trunk Control	Trunk Port Number: 001-200	1

Conditions

This program is only available in terminal and WebPro programming.

Feature Cross Reference

None

Description

Use **Program 90-13 : System Information Output** to define the output port to be used as the system information output. The baud rate for the COM port should be set in Program 10-21-02.

Input Data

Item No.	Item	Input Data	Default
01	Output Port Type Indicate the type of connection used to print the system information.	0 = No setting 1 = -- Reserve – 2 = -- Reserve – 3 = -- Reserve – 4 = CTA/CTU (<i>for Aspire Keysets Only</i>) 5 = USB port (CPU)	0
02	Destination Extension Number If the output port type (item 1) is set to CTA/CTU, enter the extension number (Aspire keyset) with the CTA/CTU connection.	Extension Number (Up to 8 digits)	No setting
03	- Not Used -	-	-
04	Output Destination System ID Define the system ID of the UX5000 to which the data will be outputted.	0-50	0
05	Output Command Dialing 1 from this program sends the system report to the connected USB device on the CPU.	Dial 1 and press HOLD (Press only HOLD key for cancel)	-

Program 90 : Maintenance Program

90-36 : Firmware Update Time Setting

Level:

IN

Feature Availability

- Available - requires a MEMDB. This program is view only. To define the settings for this option, PCPro must be used to convert the firmware file (TOOLS-CREATE F/W PACKAGE) and to define the options (COMMUNICATIONS/FIRMWARE UPDATE).

Description

Use **Program 90-36 : Firmware Update Time Setting** to display the update time for firmware updates for MAIN.BIN, DSPDBU.BIN and DSP.BIN.

To define the settings for this option, PCPro must be used to convert the firmware file by clicking on the TOOLS-CREATE F/W PACKAGE menu and then defining the options in the COMMUNICATIONS/FIRMWARE UPDATE menu.

When this function is executed, a USB flash drive must be installed in the CCPU. This is where the firmware files are stored until the scheduled update time.

Input Data

Item No.	Item	Input Data	Default
01	Firmware Update Schedule Time With PCPro: This option sets the time to update firmware which has been copied to the installed USB flash drive on the CCPU. With terminal programming,: This option views the defined time to update firmware which has been copied to the installed USB flash drive on the CCPU. Time registration will fail the scheduled time has already past.	Year: 0~99 Month: 0~12 Day: 00~31 Hour: 00~23 Minute: 00~59	0 0 0 0
02	Update Mode With PCPro: This option enables the Firmware Update feature. If enabled, the new firmware stored on the USB flash drive will update data at the scheduled time. With terminal programming,: This option is view-only.	0 = Disabled 1 = Enabled	0 = Disable 1 = Enable
03	Update Report This option will display report data on the sucess/failure of the scheduled firmware update.Only one report will be saved. With each new update, the previous report is overwritten with the new information. Sample report data is: Update Success: "Update is success. Update Time:" Update Fail: "Update is fail. Since 'A' drive is not available." Update Fail: "Update is fail. Since Time is expired."	Maximum 256 Characters	-

Feature Availability

- Available.

Description

Use **Program 92-04 : Extension Data Swap** to swap an extension's programming to another extension number.

The following extension-based programs will be swapped:

Program No.	Program Name
11-02	Extension Numbering
12-05	Night Mode Group Assignment for Extensions
13-03	Abbreviated Dialing Group Assignment for Extensions
13-06	Station Abbreviated Dial Number and Name
15-01	Extension Basic Data Setup (include Virtual Extension)
15-02	Multi-Line Terminal Basic Data Setup
15-03	Single Line Terminal Basic Data Setup
15-06	Trunk Access Map for Extension
15-07	Programmable Function Key
15-08	Incoming Virtual Extension Ring Tone Setup
15-09	Virtual Extension Ring Assignment
15-10	Incoming Virtual Extension Ring Tone Order Setup
15-11	Virtual Extension Delayed Ring Assignment
15-12	Conversation Recording Destination for Extension
15-13	Loop Keys
15-14	Programmable One-Touch Keys
15-18	Virtual Extension Key Enhance Options
15-19	System Terminal Book Setup for Extension
16-02	Department Group Assignment for Extensions
20-06	Class of Service for Extension
20-29	Timer Class for Extensions
21-02	Trunk Group Routing for Extensions
21-04	Toll Restriction Class for Extensions
21-07	Toll Restriction Override Password Setup
21-10	Dial Block Restriction Class Per Extensions
21-11	Hotline Assignment
21-13	ISDN Calling Party Number Setup for Extensions
21-15	Individual Trunk Group Routing for Extensions

Program 92 : Copy Program 92-04 : Extension Data Swap

21-18	IP Trunk Calling Party Number Setup for Extensions
21-19	IP Trunk (SIP) Calling Party Number Setup for Extensions
21-20	SIP Trunk Call Discernment Setup for Extensions
22-04	Incoming Extension Ring Group Assignment
22-06	Normal Incoming Ring Mode
23-02	Call Pickup Group
23-03	Ring Line Preference
23-04	Ring Line Preference for Virtual Extensions
24-03	Park Group Assignment
24-06	Fixed Call Forwarding
24-07	Fixed Call Forwarding Off-Premise
24-08	Call Forwarding for Centrex
26-04	ARS Class of Service
26-07	Not used in U.S.
31-02	Internal Paging Group Assignment
41-02	ACD Group and Agent Assignments
41-17	ACD Login Mode Setup
42-02	Hotel/Motel Terminal Setup
90-28	User Programming Password Setup
92-05	Data Swap Password of each Extension Setup

Input Data

Item No.	Item	Input Data
01	Extension Data Swap Enter the two extension numbers which should be swapped. After pressing HOLD, the UX5000 data for the programs listed in the table above will be swapped. Any user-defined programming stored in the SRAM will not be swapped (for example, Call Forward set up, Selectable Display Messaging, etc.).	Extension Number 1: Extension Number (max. 8 digits) Extension Number 2: Extension Number (max. 8 digits)

Program 92 : Copy Program

92-04 : Extension Data Swap

Conditions

- Any user-defined programming stored in the SRAM will not be swapped (for example, Call Forward set up, Selectable Display Messaging, etc.).
- *The extensions to be swapped must be idle* while the swap is performed, or an "Invalid" error message will be received.
- Data for virtual extension's cannot be swapped.
- When a swap is performed, the following actions are executed for the swapped extensions.
 - Camp On Clear (Program 11-12-05)
 - Common Cancel (Program 11-12-37)
 - Last Number Redial Clear (Program 11-17-17)
 - Saved Number Clear (Program 11-12-18)
 - Incoming History data is deleted.
- *Using Program 92-04-01 will also swap the order in which these extensions are displayed in all extension-related programs.* This means that the UX5000 will no longer display all the extension numbers from low to high. For example, if port 2 and 6 were swapped, when viewing the extensions in 15-02-01, the extensions will display in the following order: 301, 306, 303, 304, 305, 302.

Feature Cross Reference

Maintenance

back  ↑  ↓  select
```

3. Enter the number of the item you want to program.

```
92-04-01
Ext. Number 1
←      →
```

4. Enter data for the item you selected + HOLD.
5. Press MIC once to enter a new item number.
OR
Press MIC until you've exited that series's programming section.

Program 92 : Copy Program

92-05 : Data Swap Password

Level:

IN

Feature Availability

- Available.

Description

Use **Program 92-05 : Data Swap Password** to define the password to be used by each extension when using the Extension Data Swap feature using a service code.

Input Data

Item No.	Item	Input Data	Default
01	Password for Extension Data Swap This program defines the password to be used by each extension when using the Extension Data Swap feature using a service code defined in Program 11-15-12.	0 - 9, *, # (Fixed 4 digits)	No Setting

The following extension-based programs will be swapped:

Program No.	Program Name
11-02	Extension Numbering
12-05	Night Mode Group Assignment for Extensions
13-03	Abbreviated Dialing Group Assignment for Extensions
15-01	Extension Basic Data Setup (include Virtual Extension)
15-02	Multi-Line Terminal Basic Data Setup
15-03	Single Line Terminal Basic Data Setup
15-06	Trunk Access Map for Extension
15-07	Programmable Function Key
15-08	Incoming Virtual Extension Ring Tone Setup
15-09	Virtual Extension Ring Assignment
15-10	Incoming Virtual Extension Ring Tone Order Setup
15-11	Virtual Extension Delayed Ring Assignment
15-12	Conversation Recording Destination for Extension
15-13	Loop Keys
15-14	Programmable One-Touch Keys
16-02	Department Group Assignment for Extensions
20-06	Class of Service for Extension
21-02	Trunk Group Routing for Extensions
21-04	Toll Restriction Class for Extensions
21-07	Toll Restriction Override Password Setup

Program 92 : Copy Program

92-05 : Data Swap Password

Program No.	Program Name
21-10	Dial Block Restriction Class Per Extensions
21-11	Hotline Assignment
21-13	ISDN Calling Party Number Setup for Extensions
21-15	Individual Trunk Group Routing for Extensions
21-18	IP Trunk Calling Party Number Setup for Extensions
21-19	IP Trunk (SIP) Calling Party Number Setup for Extensions
21-20	SIP Trunk Call Discernment Setup for Extensions
22-04	Incoming Extension Ring Group Assignment
22-06	Normal Incoming Ring Mode
23-02	Call Pickup Group
23-03	Ringing Line Preference
23-04	Ringing Line Preference for Virtual Extensions
24-03	Park Group Assignment
24-06	Fixed Call Forwarding
24-07	Fixed Call Forwarding Off-Premise
26-04	ARS Class of Service
26-07	Not used in U.S.
31-02	Internal Paging Group Assignment
41-02	ACD Group and Agent Assignments
41-17	ACD Login Mode Setup
42-02	Hotel/Motel Terminal Setup
92-05	Password for Extension Data Swap

Conditions

- Any user-defined programming stored in the SRAM will not be swapped (for example, Call Forward set up, Selectable Display Messaging, etc.).
- The extensions to be swapped must be idle while the swap is performed, or an "Invalid" error message will be received.
- Data for virtual extension's cannot be swapped.
- When a swap is performed, the following actions are executed for the swapped extensions.
 - Camp On Clear (Program 11-12-05)
 - Common Cancel (Program 11-12-37)
 - Last Number Redial Clear (Program 11-12-17)
 - Saved Number Clear (Program 11-12-18)
 - Incoming History data is deleted.
- Using this option will also swap the order in which these extensions are displayed in all extension-related programs . This means that the UX5000 will no longer display all the extension numbers from low to high. For example, if port 2 and 6 were swapped, when viewing the extensions in 15-02-01, the extensions will display in the following order: 301, 306, 303, 304, 305, 302.

OR
Press MIC until you've exited that series's programming section.

Program 92 : Copy Program

92-06 : Fill Extension Data

Level:

IN

Feature Availability

- Available.

Description

Use **Program 92-06 : Fill Extension Data** to fill program entries for a range of extensions to the same as a designated source extension. In addition, program data can be deleted for a range of ports (see Program 92-07).

Input Data

Item No.	Item	Input Data
01	<p>Fill Extension Data Enter the 4-digit program number you would like to fill. For example, Program 11-02 would be entered as "1102". Enter the source extension number (the extension which contains the data to be used) and press HOLD. Next, enter the first extension number to be filled and press HOLD. Enter the last extension number to be filled and press HOLD. The data from the source extension for that program will then be entered into the range of extensions defined.</p>	<ul style="list-style-type: none"> • 4-Digit Program Number (no hyphens) • Source Extension Number • First Extension Number in Destination • Last Extension Number in Destination

The Fill program can be used only with the following programs:

Program No.	Program Name
11-02	Extension Numbering
11-04	Virtual Extension Numbering
11-06	ACI Extension Numbering
11-07	Department Group Pilot Numbers
11-08	ACI Group Pilot Number
11-17	ACD Group Pilot Number

Conditions

- With the Fill function, if the data is out of range, the display will show "Invalid Data" and allow you to reenter the range.
- If data to be filled is duplicate data, the display will show "Fail to fill" and allow you to reenter the range.

Feature Cross Reference

- Maintenance

Level:
IN

Feature Availability

- Available.

Description

Use **Program 99-02 : Nondisclosure Options Firmware Download** to downgrade a particular blade's firmware.

This option is only available through terminal programming. *It is only recommended to downgrade firmware when advised by NEC's Technical Service department.*

In order to downgrade a blade's firmware, you will need to copy a older version of firmware to the "Firmware" directory onto the USB which will be inserted into the CCPU.

Note: Do not insert the USB flash drive into the CCPU with the power on as certain versions may cause the CCPU to reset.

To determine the correct file to move to the USB flash drive, refer to the following format:

- First 2 digits = Last 2 characters of the blade ID
- Next 2 digits = Firmware version (for example "12" equals "version 1.2")
- Last 2 digits = Order of file and total number of numbers (for example, 16 means that the file is the first file and the firmware is divided into 6 files)

If a firmware file consists of several files, each file will be copied automatically from the USB. If there are multiple files for a blade, be sure to copy all the blade firmware files to the USB flash drive.
